# National Register of Historic Places Registration Form

This form is for use in nominating or requesting determinations for individual properties and districts. See instructions in How to Complete the National Register of Historic Places Registration Form (National Register Bulletin 16A). Complete each item by marking "x" in the appropriate box or by entering the information requested. If an item does not apply to the property being documented, enter "N/A" for "not applicable." For functions, architectural classification, materials, and areas of significance, enter only categories and subcategories from the instructions. Place additional entries and narrative items on continuation sheets (NPS Form 10-900a). Use a typewriter, word processor, or computer, to complete all items.

### 1. Name of Property

historic name Ninth Street Hill Neighborhood Historic District  
other names/site number 157-333-30000

### 2. Location

street & number see continuation sheet N/A  not for publication  
city or town Lafayette N/A  vicinity  
state Indiana code IN county Tippecanoe code 157 zip code 47905

### 3. State/Federal Agency Certification

As the designated authority under the National Historic Preservation Act, as amended, I hereby certify that this  nomination  request for determination of eligibility meets the documentation standards for registering properties in the National Register of Historic Places and meets the procedural and professional requirements set forth in 36CFR Part 60. In my opinion, the property  meets  does not meet the National Register criteria. I recommend that this property be considered significant  nationally  statewide  locally. (  See continuation sheet for additional comments.)

## Section 7-Description

Ninth Street Hill is a neighborhood located southeast of downtown Lafayette. It is an area of three streets-Ninth, State and Hitt Street. There are a total of 96 lots in the neighborhood of which all but two are residential (see buildings #3 and 63 below). The northern portion of The Ninth Street Hill Neighborhood Historic District starts on the southeast side of the Norfolk & Southern Railway and is located entirely on the natural hill element of the east side of the Wabash River Valley. The top of the hill is attained at approximately the intersection of State and Ninth Streets and the balance of the district extends along these two streets, south and southeast, to their points of intersection with Kossuth Street. Hitt Street, which extends from Seventh to Ninth, is also included.

In the early days of the district many of the stately homes were fronted by brick sidewalks and cast-iron fences. Fences are still evident at 122, 203, 202-4, 212, and 402 south 9th Street, while brick sidewalks have disappeared. Limestone curbs are now gone on 9th Street, but remain intact the full length of Hitt Street and State Street (9th to Kossuth) with the exception of two short stretches replaced by concrete.

The original hillside properties were developed into estates with areas to keep carriage horses. Over the years there has been a tendency to subdivide larger estate properties into smaller lots. Yet, much of the stateliness of the Ninth Street Hill Neighborhood Historic District has been retained.

Typically, houses are at least two stories high. Frame construction is more common than brick, yet a number of brick homes stand in the district. The styles and dates of construction vary. The first homes were built in the 1850s and 60s. Large scale houses continued to be built in the 1880s and 90s. Shortly after World War I, the final lots in the district were developed for residences.

The lot to building relationship varies considerably in the district, as it did historically. Several homes had large lots, and have retained them. Other areas, such as the west side of Ninth just south of the Norfolk and Southern tracks, are tightly developed with large homes. Maps cannot adequately show the dramatic nature of the hill, and the unique character it imparts to district. Vistas to the downtown are framed looking down Ninth and west on Hitt (photo 45). Rooftops or side walls come to view as one looks down or up the hill. State Street starts at a diagonal at

United States Department of the Interior  
National Park Service

National Register of Historic Places  
Continuation Sheet

Section number 7 Page 3

---

*Ninth Street Hill Neighborhood Historic District  
Tippecanoe County, Indiana*

Ninth, and it too creates unexpected views of homes. Lots are often high above the sidewalk level, adding to the precarious feeling of houses on Ninth.

A number of estates and estate structures began to disappear due to the costs associated with upkeep and development pressures after 1930. The demolition of the impressive mansion of Robert Sample in the late 1950s was the most serious loss (now the site of apartment buildings, see photo 9). Richard B. Wetherill's large house on the hill was demolished in the 1940s. Another significant loss was that of the James Fowler house at the corner of 9th and Hitt Street in 1938. With the loss of the main structure, the estate was subdivided into 16 lots in the 1940's and structures were constructed in the ranch style.

The very low number of non-contributing buildings adds greatly to the historic feeling of the district. Only sixteen of the 97 primary buildings in the district are non-contributing. Only four of the sixteen are altered old houses, the remainder are post World War II construction. The rest of the other 37 non-contributing buildings are garages built in recent decades. The other 15 garages or carriage houses date from the period of significance and contribute to the district.

*Note: Properties number 1, 2, 28, and 29 were already listed on the National Register of Historic Places as part of the Ellsworth Historic District. These properties were not included in this district. To retain the numbering sequence, however, they are mentioned in this document and remain numbered on the map.*

**All properties listed below are described in the following format:**

) = Number corresponding to number on sketch map  
ADDRESS, DATE, PHOTO # (where applicable), STATUS (contributing or non-contributing)  
DESCRIPTION

South Ninth Street (east side)

1) 9th Street at South Street (901 South Street), c. 1960, **PHOTO 1**  
*In Ellsworth Historic District, not included in resource count or boundary.* One story, brick commercial building with flat roof.

Tippecanoe County, Indiana*

2) 9th Street at South Street (909 South Street), 1851-52, **PHOTO 2**

*In Ellsworth Historic District, not included in resource count or boundary.* The Moses Fowler House was also individually listed on the National Register on 8-5-71. Now a house museum, the building and its estate was once home to one of Lafayette's most powerful persons. It is a two and one-half story Gothic Revival style house, in the manner of Downing or Vaux. Exterior walls are stuccoed, with the carved wooden trim highlighting the steep gabled roofs. A wrap-around porch extends from the north side of the house to the west side. A later, 20th century addition is to the rear, enclosing a patio area with fountain and balustrade to the south.

3) 101 S. 9th, 1959, **PHOTO 3**, non-contributing

Built in 1959 as the Greater Lafayette Museum of Art, this one story painted concrete block building stretches along South Ninth. The facade is composed of plain and decoratively molded block. A projecting entrance area has a low brick planter with flagpoles. Still used by the Greater Lafayette Museum of Art, this building does not contribute to the district.

4) 111-113 S. 9th, c. 1900, contributing

2 story, wood frame. Brick foundation and wood clapboard siding. 2 story porch with brick piers on the 1st story and wood piers on the second level obscures its simple design. A projecting bay window is to the side. The roof has soffit brackets.

5) 115 S. 9th, c. 1910, contributing

Queen Anne with Colonial Revival detailing. 2 stories. Brick foundation, wood clapboard siding. Hip roof, asphalt shingles, metal finial. Porch is supported on slender wood columns, pediment stands over the front porch steps.

6) 203 S. 9th, 1891, **PHOTO 4**, contributing

Samuel Moore had this house built in 1891. Two and one-half to three stories high, this house epitomizes the Queen Anne style in its highly ornamented surfaces. The first floor is rock-faced limestone, while upper floors are fishscale shingle clad. The plan features projecting gables to the west and north with a prominent circular corner tower capped by a conical roof covered in slate. The rest of the main roof is covered in asphalt shingles. The front porch follows the contours of the plan, including a dramatic circular sweep at the northwest corner. Second story rooflines have simple scroll corbels. Other decorative features are the multi-paned transoms and third floor windows of the tower, patterned masonry chimney, and border paned windows. At the rear of the

United States Department of the Interior

---

*Ninth Street Hill Neighborhood Historic District  
Tippecanoe County, Indiana*

lot is a contributing relocated garage with slate roof, c.1935. A historic cast iron fence marking the front yard also contributes (structure) to the district.

7) 207 S. 9th, 1895, **PHOTO 5**, contributing

The Moore-Porter-Boswell House is an unusual two and one-half story wood frame house. Its nearly vertically pitched gambrel roof produces the feeling of a two and one-half story house. Its first story walls are weatherboard-sided and the tall gable ends are wood-shingled. A one story flat roofed porch with paired slender columns and balustrade railing runs across the front of the house. The main entry has transom window. To the south is a cross gable (gambrel) with a bowed bay underneath on the first story. The attic story has a leaded glass Palladian window.

8) 213 S. 9th, 1890, contributing

Stanley Coulter House, 2-1/2 story Queen Anne, vinyl siding covered, some brick walls, fishscale shingles in gable ends, 3 story square tower. Attic story half round windows. Frame construction, fishscale shingles. Limestone foundation. 3 story square tower. Attic story half-round windows. Multi-pane front door with sidelights.

9) 221 S. 9th, c.1895, **PHOTO 6**, contributing

Although this house has been covered with an artificial shingle-like siding, it still has much of its Queen Anne character. It is of frame construction, with a brick foundation. The projecting gabled areas and complemented by large gabled dormers, and a central hip roof. A sun room was added to the south probably in about 1920. The front porch has been altered and enclosed at some point. Another room or enclosed porch is to the north. Several multi-paned transom windows and an half-round gable window with leaded glass reveal some of the original appearance of the house.

10) 301 S. 9th, 1895, **PHOTO 7**, contributing

301 South Ninth is a Queen Anne style house which was modified in the late 1920s with the addition of stucco to all exterior elevations and a replacement porch. The typical Queen Anne massing was retained, including the gable-on-hip style roof and projecting cross gable with Palladian window. The house is two stories high, has a brick foundation and is of frame construction. The front windows are Queen Anne border light type.

11) 303-305 S. 9th, 1965, **PHOTO 9**, non-contributing  
Apartment House, two-story, brick, modern style, non-contributing carports.

12) 403 S. 9th, 1890, contributing  
Anna Sample Johnson/Ashley Johnson House. 2-1/2 story. Queen Anne.  
Frame construction. Hipped roof/lower cross gable with 3 story octagon tower.  
Brick foundation. Front 2-story bay. Non-contributing garage c. 1980. Contributing 3-bay garage  
c.1930.

13) 409 S. 9th, 1909, **PHOTO 10**, contributing  
The Edward Bohrer House is a two and one-half story home combining interests in the Tudor  
Revival and Craftsman style. The foundation is brick, as is the first story. The upper levels are  
covered in stucco accented with false half-timbering. The main roof has a side gable configuration  
with an offset cross gable to the front. A similarly detailed dormer window stands beside the gable.  
A one story, flat roofed porch covers much of the front of the house. It has a brick base and railing,  
while wood posts support the roof. The main entry, with leaded glass sidelights and transoms, is  
under the front porch. The south side of the house has a similar porch. The first floor windows have  
leaded glass transoms. Other windows are three over one sash. The garage is non-contributing.

14) 415 S. 9th, c. 1920, **PHOTO 11**, contributing  
A typical formula for Colonial Revival homes of the 1920s was gable front type. Homes of this type  
are three to five bay side gabled homes, with the plan rotated forty-five degrees to fit narrow city  
lots. The entry typically remained at the side, as in this case. This two story wood framed house has  
wood clapboard walls. The front facade has a one story porch with Tuscan style wood columns and  
an upper level balustrade. Paired French doors lead to the porch. The chimney is exposed and rises  
between the French doors, and at the attic level, by quarter-round vents. The main entry at the side  
has small porch similar in style to the front porch. Most windows are six over one double hung units.  
The garage is contemporary with the house and is contributing.

15) 421 S. 9th, 1993, non-contributing  
One story, brick and frame house, Contemporary style, attached garage.

16) 453 S. 9th, 1871-72, **PHOTO 12**, contributing  
The Wilson-Nargi House has a stone foundation; brick walls rise two stories high. In plan, it is

United States Department of the Interior  
National Park Service

National Register of Historic Places  
Continuation Sheet

Section number 7 Page 7

*Ninth Street Hill Neighborhood Historic District  
Tippecanoe County, Indiana*

simple type of Italianate house, with cube-like, symmetrical form with a two and one-half story projecting central gabled section. The low pitched hip roof has a central deck. An early twentieth century flat roofed porch with fluted Tuscan columns has a central broken pediment. Windows have stone sills and lintels; the sills have corbel blocks underneath and the lintels rest on scroll corbels. Lintels are segmental arched on the intrados, and pedimented on top. Each opening on either side of the central section frames a pair of tall windows. The central section has a paired round arch windows with stone hoods on the second story and the attic level has a single round arched window. The entablature of the house has dentils and scroll brackets. The brick garage to the north side rear is non-contributing.

17) 511 S. 9th, 1894, **PHOTO 13**, contributing

Recently rehabilitated, this two and one-half story wood framed house now reveals many original Queen Anne elements. The raised checkerboard stickwork pattern in the porch and main gables shows some Eastlake influence, as do the incised bargeboards of the main roof. The overall massing is cross plan, with intersecting asphalt shingle-clad gabled roofs. Rafter tails are exposed and scroll-cut. The wrap-around double gabled porch has square posts and lattice work between the posts and as a balustrade railing. The front upper gable has a stringcourse of corbels underneath and three windows with Queen Anne border sash. A front window repeats the Queen Anne sash motif. Richard Sample, son of Robert W. Sample, lived here for a time. The garage contributes to the district.

18) 515-17 S. 9th, 1895, contributing

Duplex, 2-1/2 story, aluminum siding. Queen Anne, with 20th century alterations, frame construction. Hipped roof with cross gables Brick foundation. Sleeping porches added c. 1930. Decorative fascia board, exposed decorative rafters, multi-pane windows in front attic gable. Non-contributing garage.

19) 519 S. 9th, 1895, contributing

House, 2-1/2 story, Queen Anne. Brick foundation. Frame construction with aluminum siding. Hipped roof with cross gables. Double entry door. Queen Anne sash windows.

20) 521 S. 9th, c.1910, contributing

House. 2 story. Brick foundation. Frame construction. Hipped roof full front porch. Non-contributing

garage.

21) 523-25 S. 9th, c.1910, contributing

Duplex. Two story. Free Classic. Frame construction. Cornerboards. Hipped roof with lower cross gables. Full double deck porch. 2 story side bay with Eastlake detailing. 2nd floor oriel window. Non-contributing garage.

22) 529 S. 9th, c.1920, contributing

House. Two story. American Foursquare. Frame construction. Shed dormer. Brick foundation. Full brick front porch. 4 over 1 windows.

23) 533 S. 9th, c. 1929, **PHOTO 14**, contributing

A nearly identical house to this one stands nearby in the Highland Park neighborhood at 814 Highland (outside of this district). Both homes have the dual oriel bays on the first story side elevation. The overall feeling of the exterior combines Craftsman with Tudor Revival elements. The foundation is brick. The oriel bays and upper floor are stuccoed with false half timbering. While the half timbering on the house proper is plain, the timbering on the bay is scalloped and placed in multiple diagonals. The hip roofed front porch is full width and has brick knee walls and plain posts. Between the paired or corner triple posts, toward the tops of the posts, are Gothic tracery panels with arches and circles. Several windows have diamond paned upper sash. The main hip roof has exposed rafters and a double gabled dormer with bargeboard and bracketing. The garage is of the same age as the house and contributes to the district.

24) 601 S. 9th, c.1885, contributing

House. 2-1/2 story. Free Classic

Gable front. Frame construction with full brick front porch. Cantilevered wall extension with cutwork brackets. Decorative single-diamond-pane windows on front 2nd story.

Non-contributing garage.

25) 605 S. 9th, 1880, **PHOTO 15**, contributing

605 S. 9th is a one and one-half story vernacular gable-front house, dating from about 1880. The foundation is masonry, the structure is wood framed with wood clapboard siding. The house is now a duplex; it is unclear if it was originally. The main entry is recessed between flanking sunrooms

Tippecanoe County, Indiana*

which were added, or perhaps enclosed from an earlier porch. Narrow French doors at the attic level echo the main French doors of the first story main entry. Two hip roofed dormers face north. A fragment of bargeboard tracery remains along the front roof line; perhaps giving an indication of the home's original character.

26) 609 S. 9th, 1922, contributing

House. Two story. American Foursquare. Brick. Full front porch. Exposed decorative rafter ends. 6 over I windows. Thin muntin strips form a border in upper sash windows. Original contributing brick garage.

32) 110 S. 9th, 1870, **PHOTO 20**, contributing

A typical middle class Italianate style house stands at 110 S. Ninth. This wood framed, wood clapboard sided house rests on a brick foundation and is roughly cubical in massing. Three bays of openings are across the front, with a transomed and double door side entry to the north on the first floor. All openings have wooden surrounds with plinth blocks and shouldered lintels with raised keystones. The cornerboards are chamfered. The frieze once had brackets; several remain on the south side of the house. The plain frieze has scallops at the point of attachment for the brackets. The deep eaves and heavy cornice remain intact. The house is capped by a shallow asphalt shingle clad hip roof.

33) 116 S. 9th, c.1890, contributing

Duplex. Two Story. Cross plan. Queen Anne. Frame construction. Stick porches with curved cut supports. Double side entries. Some Stick Style detail is under siding.

34) 118 S. 9th, c.1870, contributing

House. Two story. Italianate. Brick with later (c. 1920) brick porch. Low hipped roof with wide overhanging eaves. Paired decorative brackets. Arched widows with elaborate stone hoods.

35) 122 S. 9th, c.1850, **PHOTO 21**, contributing

The Thomas Wood House is a one and one-half story brick gable front house. The first story is three bays across, with the transomed entry set to the south. The attic level has two windows. All front windows are two-over-two double hung units set into a segmental arch. The cast iron fence is original and is a contributing structure. This house is also known as the Hueston-Rosewood-Thomas House. Thomas Wood, Lafayette postmaster in charge of the first attempted air mail delivery in 1859 (via hot-air balloon), lived here, and at 202-204 S. 9th.

36) 202-204 S. 9th, 1859, contributing

Job M. Nash House. Two story. Italianate. Frame construction, aluminum siding. Brick foundation. Wide overhanging eaves with decorative brackets. Wide projecting cornices. Paired entry door. Attic oculus window. Original iron fence. Non-contributing garage.

37) 212 S. 9th, 1899, **PHOTO 22**, contributing

The William W. Johnson House is an outstanding and early example of Colonial Revival domestic

architecture in Lafayette. Massing is cubical, recalling Georgian era houses. The limestone foundation supports wood framed walls sided in wood clapboard. Attention is focused on the entry by placement of the entry in a slightly projecting central section sheltered by a one story, bowed portico. The portico has fluted Doric columns, a full entablature, and a balustrade railing. The entry door has a heavy beveled glass light and sidelights. The entry section of the house and the main corners are marked by pilaster cornerboards. Further marking the entry section is a Palladian dormer window with steep central gable. The central arched window has Georgian pointed arch tracery muntins. The main roof is hipped; a flat deck is in the center. The first floor front windows are paired and have a surround with full entablature. Some windows are of art glass. The garage is non-contributing.

This impressive example of French Second Empire design was listed on the National Register of Historic Places on May 3, 1984. It was built for Judge Cyrus Ball. The brick and stone trimmed house takes full advantage of its prominent location near the crest of the Ninth Street Hill. The house is two stories high, with a centrally placed tower pavilion which rises three stories high. The tower is capped by a heavy mansard roof. The main entrance is framed in limestone pilasters with decorative incising, from which spring massive consoles to support the cast iron balcony. A console bracketed hood shelters the balcony. Yet another hood marks the third level of the tower. The symmetrically placed front windows have pedimented stone hoods. A massive, bracketed entablature marks the roof line of both house and tower. The carriage house is historic as well.

52) 516 S. 9th, c.1946, **PHOTO 26**, contributing  
Like its neighbor to the north, 516 S. Ninth blends well with the architecture of the district, even  
though it is from a later period than most of the homes. Local builders Lawrence and James R. Thise  
also built this house. Essentially, 516 is a Cape Cod design, relieved by the projecting gabled entry  
area and prominent chimney. Walls are of brick veneer with limestone blocks highlighting the front  
door. The garage is contributing.

53) 520 S. 9th, c.1895, contributing  
House. 2-1/2 story. Free Classic. Hipped roof with cross gables. Frame construction, aluminum  
siding. Brick foundation. Gothic cutwork gable trim and window at attic peak. Full brick porch  
with single entry door with sidelights and transom. Non-contributing garage.

Duplex. 2-1/2 story. Free Classic. Frame construction. Brick foundation. Hipped roof with cross gables. Sleeping porch. 6 over 1 windows. Non-contributing garage.

58) 602 S. 9th, c. 1890, **PHOTO 29**, contributing  
This house is a two and one-half story wood framed dwelling in the Free Classic style. The exterior is cube-like in form, with each facade having a projecting gabled section. The main roof is hipped. A large hip roofed porch with square columns and a spindled balustrade runs across the front of the house. The porch has a stone veneered foundation, while the rest of the house has a brick foundation. The second floor front has an oriel window centered in the projecting gabled section; a pent roof with modillions is across the top. In the gable end of the front gable is a Palladian window. This house has been divided into apartments. The garage is non-contributing.

59) 604 S. 9th, c.1890, **PHOTO 30**, contributing  
A typical late Queen Anne house stands at 604 S. Ninth. Rising two and one-half stories from a brick foundation, this plain wood framed house has wood clapboard exterior walls. The roof is a steeply pitched hip roof with an offset gable to the south. The porch has wood Tuscan columns resting on wood plinths, with a simple straight-railed balustrade enclosing the porch. The porch roof is hipped. Portions of the second floor are jettied out from the main portion of the house. The front gable end has corner pent returns. Several brick chimneys with corbel work protrude from the roof. The garage is non-contributing.

60) 610-612 S. 9th, c.1890, **PHOTO 31**, contributing  
This unusual house combines influences from the Queen Anne and Shingle Styles. It is a two story wood frame house with a limestone foundation and wood clapboard siding. The main portion of the house has a hip roof, but a jerkin headed section is placed to the front. The corner porch is two stories high and the upper porch balustrade is covered in fishscale shingles. The side elevation has

Kossuth Street (north side)

63) 902 Kossuth, c.1930, **PHOTO 16**, contributing

The only commercial building in the district built for that purpose originally is shown here. This small yet well detailed Spanish Eclectic style building blends well with the residential properties around it. It housed businesses which served the surrounding neighborhoods. Occupying the corner of Kossuth and Ninth, the one story brick building has a curved, diagonal facing entry, and other store fronts along both streets. A series of brick piers extend through the roof. Many of the store fronts have been altered by infilling the glass areas. Many of the store fronts have a marble like material (possibly glazed terra-cotta) for the kick panels. The false pent roof is covered in terra-cotta Spanish roof tiles, with copper guttering along the lower edge.

64) 822 Kossuth, 1916, **PHOTO 32**, contributing

The Marshall-Lahr House has an unusual Craftsman bungalow format consisting of two connected parallel gabled wings. Walls are dark stained wood shingle sided and the house has a brick foundation. Over the front French doors is a shed dormer. The open eaves have exposed rafters and purlins. Each wing has a triple band of casement windows with overlapping header. The garage is detailed to match the house and contributes to the district. Local architect George Halstead designed this house. Halstead, a civil engineering professor at Purdue, was also involved in the design of the Main Street Bridge in Lafayette.

State Street (East Side)

67) 904 State Street, c.1890, **PHOTO 33**, contributing

Among the most impressive homes in the district is this massive two and one-half story brick mansion. Known as the Blackstock-Nargi House, its design includes elements of Queen Anne and Free Classic style. The complex massing and picturesque feeling are Queen Anne; the classical detail is Free Classic in inspiration. The massing of the house conforms with the dual frontage on the sixty degree corner of State and Ninth. A prominent forward projecting gabled section faces each. A front porch with brick plinths on which rest Ionic columns and a full entablature with dentil molding. The porch roof deck has a balustrade railing. The porch extends from one side of the gabled projection to center line of the house, one bay beyond the other side of the gabled projection. This bay is the sidelighted entry on the first story, and is a recessed balcony enclosed by the porch deck railing on the second level. A single column supports the roof corner under the balcony. The gable is enclosed by a raking cornice with modillions. A course of modillions surrounds the entire main roof line as well. A large oval arched gable end window has a balconette of wood shingle facing. The Ninth Street gabled section is fronted by a porte-cochere. A semi-hexagonal sunroom with transomed windows extends over the porte-cochere. It may have been added, as it cuts into the modillion course of the main roof. The Ninth Street gable end is detailed similarly to the other gable. Between the two gables, on the main roof, is a dormer-like feature extending from the main roof. Terminating the dormer is an open octagonal tholos of Doric columns with bellcast roof and metal finial. The main part of the house has a steep pitched hip roof. Several solar energy collector panels have been added to the roof.

70) 920 State Street, 1904, **PHOTO 34**, contributing  
State Street continues the theme of large lots and large single family dwellings, especially on the north / east side of the street. The William Potter House is among the largest homes in the district. Potter was a prominent real estate investor and attorney. He removed several existing homes to build this house. The house was actually built from the remnants of three Connecticut Colonial era dwellings, including the Norwich House and the Hubbard-Slater Mansion. The houses were first connected and displayed as part of the St. Louis Louisiana Purchase Exposition of 1912; Potter bought the building and moved it to 920 State Street in Lafayette. The brick veneer was likely reapplied to the building after the move. Though it has no significance as a Colonial era building, the house is an outstanding example of Georgian Revival design. In a composition reminiscent of Hoban's design for the White House south facade, the main facade of the Potter House has a centered forward projecting pavilion with semi-elliptical two story Ionic portico. Square windows of the attic level of the centered pavilion are concealed by a classical balustrade. A round arched entry opening is centered under the portico and features Ionic columns *in antis*. The stepped back flanking wings have six light triple hung sash windows with shutters and plain stone lintels. A matching balustrade covers the roof line of the flanking wings. Each wing has a balustraded terrace in front. An Ionic porte-cochere with balustrade projects from the north corner of the house.

This early house belonging to John Godfrey Sample was substantially remodeled by the Marshall family in about 1900. This impressive and early example of Tudor Revival design combines brick, limestone, stucco and half-timbering. The overall massing is "L" shaped, with multiple gables on the northwest and southwest elevations. The front (southwest) elevation has a one story projecting portico of brick and stone construction. The porch is entered through two Doric columns *in antis* supporting a full entablature with Doric frieze of triglyphs, metopes and mutules under a broken pediment with centered cartouche. Over the pediment is an arched parapet, which becomes a plain parapet as it wraps around to the sides. Doric *antepa* support corners of the porch. To the right (southeast) of the porch is the brick first story and crenelated stone bay window. A terrace with brick wall is alongside this bay. Most windows have plain lower sash and multi-paned upper sash. Large portions of the upper walls are stucco clad, except for short wall sections at corners, which have brick quoining. The second floor windows on the front have decorative hoods which may have survived from the original house. Perhaps where an Italianate frieze once ran, the house has several belt courses and half timbering in some areas. The front gable is jettied with wooden corbels underneath, and has false half-timbering. A band of four casements is centered in the gable. The roof line is flared at the eaves and has a wide bargeboard. Plain heavy brackets support the gable edges. The roof is covered in terra-cotta tile. Beside the main gable, on the side of the side facing gable, is a through-the-cornice gabled dormer with paired casements and half-timbering. The side (northwest) elevation has a polygonal sunroom on the first story. Large multi-paned windows are set in Tudor arches. Just northeast of the sunroom is an other polygonal bay on the first story. The second story has two gables, one within the other, each similar in appearance to the front gable. The garage is non-contributing.

The Brockenbrough-Murdock House or "Elmhurst" is a two story brick Italianate style house. The complex plan is roughly "T" shaped. A forward projecting block with three bays across the front has the main entrance at the left corner. A small portico with broken pediment and fluted square posts shelters a round arched doorway with fanlight transom. The two windows beside the doorway are tall and narrow segmental arched openings with pedimented and keystone hoods. Most of the first floor windows are treated in this manner. The second floor windows, aligned above the first floor openings, are rectangular sash, but the hoods are segmental pediments. Most second floor windows repeat this motif. A small bay to the northwest corner has corner pilasters and a single round arched window with recessed brick arches. The southeast side of the house has a two story semi-hexagonal bay window. The main roof is hipped, and has uncharacteristically shallow eaves with small modillions. The house now serves as the United Way office for Lafayette.

Although extensively altered in about 1890, the James Wallace House has much of its Greek Revival spirit left in its stately proportions and temple front massing. This view shows the original temple front portion of the house to good advantage. The original portion is of brick construction, painted white, and is three by three bays. The openings on the first floor front are elliptical arched. One is an entry with fanlight and sidelights, the other is a window grouping. It is unclear if these openings are original to the house or were part of the 1890s remodeling. The three symmetrically placed windows on the second story of the front capture the original feeling of the house. The sash are surely replacements from the 1890s; each has sixteen over one sash. Each has a flat lintel with keystone. The front corners have Ionic pilasters. A full pediment with plain frieze and modillion course completes the front. Several side openings match the second story front windows in treatment. The front porch and several additions to the south are part of the remodeling. The front porch has Ionic columns, a full entablature and a full pediment over the porch entry steps. A classical balustrade encircles the porch roof. The porch wraps around to the east side. An section on the east side, abutting to the south of the original portion of the house, has a balustrade railing. An unusually finely detailed bay on the west side of the house, toward the rear, is semi-circular in plan with a sunroom section on the first level and a open portico with Ionic columns on the second story. The windows of the sunroom have curved glass to fit the plan of the room. A course of modillions and balustrade top this bay. Taking advantage of the steeply terraced site, a basement level garage was added to the west side, just north of the previously described bay, in the early 1900s.

84) 919 State Street, c.1860, **PHOTO 40**, contributing

Another early brick house in the district stands next door to the Wallace House, this one and one-half story dwelling reflecting the next style in vogue-the Gothic Revival. The plan is roughly "T" shaped; a steeply pitched gable projects forward, side facing gable section is across the rear. The transomed front door is in the center of the front gable, with a tall window above it. The front door is glazed,

United States Department of the Interior  
National Park Service

Continuation Sheet

Section number 7 Page 21

*Ninth Street Hill Neighborhood Historic District  
Tippecanoe County, Indiana*

and has Gothic tracery. The one story hip roofed porch wraps around to the sides of the front gable. Paired wood posts with wood tracery between them support the porch. The tall windows beside the gable have stone sills and lintels. The front gable is trimmed in a jigsawn cusped bargeboard. The flanking through-the-cornice dormers are similarly trimmed. The side facing gables of the main roof also have ornate bargeboards. A set back wing to the west with slightly lower side gable roof has a small porch and a similar dormer window. Judge DeWitt Wallace was an early owner of the house. The garage is non-contributing.

85) 925 State Street, c.1900, **PHOTO 41**, non-contributing

Comparatively few old houses in the district have been altered enough to be rendered non-contributing. This two story wood framed house has lost virtually all of its detail and much of its massing and feeling. The wrap around porch has been entirely converted into spare rooms. The garage is non-contributing as well.

86) 1003 State Street, c.1890, **PHOTO 42**, contributing

1003 State Street is a fine example of large scale late Queen Anne style house. It has a brick and limestone foundation. Walls are of wood clapboard. The plan is basically cubical, with the corner tower and front projecting gable creating a picturesque silhouette. A broad front porch with low pitched gable and hip roof is carried on slender columns. The main entry has glazed double doors. Above the porch to the left (east) is a gabled section. The walls are chamfered underneath the gable, creating an oriel bay. The gable has a Palladianesque window group at the attic level, with a taller central window flanked by smaller ones. A fixed window is between the gable and the three story polygonal tower. The main asphalt shingle roof is a steeply pitched hip roof. Another polygonal bay is located on the west wall toward the rear. This house was recently extensively rehabilitated. Asphalt shingle siding was removed, and the truncated steeple roof of the tower was rebuilt to its proper design.

House. Two story. Queen Anne cottage, Upright and wing type. Frame construction. Brick foundation. Gabled dormer. Classical columns on front porch with diagonal cut support braces. Non-contributing garage.

**Section 8-Statement of Significance**

The Ninth Street Hill Neighborhood Historic District is significant in the history and growth of Lafayette. Expansion of the city in the railroad era starting in 1853 included residential development by wealthy and influential men who built "country estates" on Prospect Hill (Ninth Street Hill). Streetcar travel in the late 19th century made the area more accessible. The construction that resulted was a blend of a wide range of good examples of the major architectural styles from the 1850s to the mid 1940s. No where else in Lafayette does such a unique and significant mix of styles occur in such a finite area. The district meets Criterion A as a physical record of the development of Lafayette during the streetcar era (community planning and development). As a historically linked collection of domestic architecture, Ninth Street Hill Neighborhood meets Criterion C as well.

Platted in 1825, Lafayette town founder William Digby likely thought his settlement would prosper because of river commerce. Slowly at first, Lafayette did become a significant port on the Wabash River. The coming of the Wabash and Erie Canal in the mid 1800s brought greater commerce than imagined. One of the early industries at this time was the Lafayette Plow Works, owned by John Sample. Several of Sample's family members owned homes in the Ninth Street Hill area.

Lafayette's population hovered around 2,000 during the mid 1800s. In 1856, the Lake Erie, Wabash and St. Louis Railroad was completed through Lafayette, using the Wabash and Erie Canal towpath as a right of way. Just several years before this, the Monon Railroad was completed to Michigan City, passing through Lafayette.

The Monon later announced plans to move their locomotive works to Lafayette from New Albany, Indiana, adding 1,000 workers to the population. Lafayette entered the rail age and became the most important rail hub between Indianapolis and Chicago. By 1870, the population of Lafayette had jumped to over 13,000.

The topographic conditions of Lafayette shaped its growth in the 19th century. Most of the city remained confined to the level low lands near the river, due to the need for access to the downtown for essential goods and services. The Centennial neighborhood, to the north and east of the original downtown plat, was within the low lands and developed with churches, schools, and a variety of homes. The wealthy lived in close proximity to the average citizens. The riverfront area was given over to heavy industry and rail shipping, with the resulting coal soot settling over the low lying areas of most of the city.

To the south and east of the immediate downtown area, the terrain rose to a level plateau of farmland. The rise was sharp to the south, where a hill overlooked the fertile Wabash River. Certainly desirable for residential use, but not easily accessible, the hill remained sparsely developed before the Civil War. Prior to 1860, Ninth Street was known as Clark Street and what today is known as Ninth Street Hill was originally Prospect Hill. State Street was a country lane originally. A hollow which defines the east side of Prospect Hill necessitated that the street run diagonally. In the 19th century, State Street connected to a country road and served to connect Lafayette to rural areas to the south. Ninth Street continued to the city limits and terminated. Rather than developing new streets, suburban residential growth in this part of Lafayette followed established roads-Ninth and State. The first to construct homes in the Ninth Street district were the wealthy and prominent people

of Lafayette such as Cyrus Ball (#44, 402 S. Ninth, 1865-69); Judge Dewitt Wallace (#84, 919 State St., c.1860) and James Wallace (#83, 907 State St., c.1860). Of course, Lafayette businessman Moses Fowler had built his palatial residence facing South Street, part way up the hill, in 1852 (just north of the district). No doubt, Fowler's choice influenced public perception. Other early homes along State and Ninth were number 16 (453 S. 9th), built in about 1871-2 for the Wilson family, and number 76 (1114 State), built in 1873-4. Even in the mid 1800s, some middle class families sought the refuge of the hill. The houses at 122 South Ninth and 410 S. 9th are thought to date from about 1850, and are typical middle class houses of that period for Lafayette.

Without a doubt, the most dramatic event which transformed the hill into a fully developed suburb was the construction of street railways in Lafayette. The city holds the claim for the first electrified street railway system in Indiana. In 1883, the Lafayette Street Railway Company was formed and three lines were contemplated. One would extend east on Main Street, out of the river valley, another north on Ninth to the Monon Shops on the edge of town, and the other would run on Main Street, then turn south on Ninth, up the hill. These three lines were electrified in 1888.

Most of the families who lived on the Ninth Street Hill before the trolley line came were upper class families who chose to live in a less urban setting. The coming of the trolley transformed the hill into a streetcar suburb with broader appeal. Naturally, development tended to stay on the already established streets of Ninth and State. In the early 1890s, Highland Park neighborhood was platted just southwest of the Ninth Street Hill Neighborhood Historic District. It too took advantage of the trolley line to make the area accessible. The opening of the hill to residential suburban development signaled the expansion of Lafayette beyond the confines of the valley.

The Ninth Street Hill area attracted prominent persons and families. The following is a sampling some of the prominent and influential people who called this area home:

Judge Cyrus Ball (402 S. 9th), who came to Lafayette as early as 1827, was a prominent merchant, attorney and justice of the peace. His wife was a published author, wrote poetry and was the author of anti-slavery stories published in eastern magazines. A descendent of Cyrus was Cable Gorden Ball. Cable Ball served in the Indiana House of Representatives from 1951 to 1960. He attained the rank of Lt. Col. in World War II while serving in the Air Corps in China, Burma and India.

Dean Stanley Coulter (213 S. 9th) served as a member of the Purdue faculty for 39 years, retiring

in 1926. A one time missionary to China for the Presbyterian Church, he was a professor of biology and director of the biological laboratories. In 1907 he was made the first dean of the school of science at the university and from 1919 to his retirement he also served as dean of men. It was in this later position that he particularly endeared himself to the student body. Stanley Coulter Hall on Purdue's main campus is named for him.

David Linn Ross (221 S. 9th) President and Chairman of the board of Ross Gear and Tool Company. Known and admired for his loyalty to Lafayette, he was born here, amassed a fortune and was a generous contributor to local charities.

Evaleen Stein (708 Hitt) Artist and author, Stein's most noted works were writings of poetry and a number of short books for and about children. In 1907, Miss Stein was honored at a rare and historic literary event at Purdue University. Among the notable guests at the reception in the Stein House was George Ade, James Whitcomb Riley, Meredith Nicholson and Charles Major.

Henry W. Marshall (1014 State) Founder of the Lafayette Journal & Courier newspaper, served as the paper's editor-in-chief and publisher. He also served for 16 years as a state legislature and acting president of Purdue University. As a wedding present to his son, Marshall built the house at 822 Kossuth Street which also contributes to the district.

Gordon Haig Graham (528 S. 9th) Graham was the Lafayette Journal & Courier's sports editor as well as night editor and the author of the nationally syndicated sports column "Graham Crackers." Gordon was the son of Dr. William Renwick Graham, who was pastor of Central Presbyterian Church for many years.

Other prominent residents include; Thomas Wood (122 S. 9th) Postmaster of Lafayette who in 1859 orchestrated the nation's first air mail flight, Col. Howard Ayres (907 State) aide-de-camp to General MacArthur during WWII, Joseph Andrew (1007 State) national President of the American Red Cross and Richard B. Sample (511 S. 9th), was Mayor of Lafayette from 1902-3 and president of Lafayette Savings Bank.

While several areas of Lafayette reflect the influence of transportation on the development of Lafayette, few have comparable resources to the Ninth Street Hill Neighborhood Historic District. The most comparable is Highland Park neighborhood, now listed on the National Register of

Historic Places. Because Highland Park was a meadow until 1892, its homes mostly date from the late 19th to early 20th centuries. The homes are more consistent in style, setback, and massing. Ninth Street Hill, however, developed gradually over a longer period of time. Therefore, Ninth Street Hill includes a wider array of domestic architectural styles.

In fact, the Ninth Street Hill area includes examples of nearly every style (as well as vernacular types) of domestic architecture from the mid nineteenth century to the mid twentieth century. A c.1850 brick gable front vernacular house at 122 S. Ninth represents the earliest home in the district. The Gothic Revival style is well represented by the Judge Wallace place at 919 State, c. 1860. Fine Italianate homes of both moderate and large scales were built in the district in the 1870s. The Ball House is a landmark example of Second Empire style on the hill. The advent of trolley transportation and an influx of new well-to-do families are represented by homes of the 1880s and 90s. Few homes in Lafayette can match the Victorian exuberance of the Samuel Moore House (203 S. Ninth) or the Blackstock-Nargi House (904 State), not to mention some of the typically scaled examples of Queen Anne in the district. Arts and Crafts homes also sprang up on the hill, as well demonstrated by the Marshall-Lahr House at 822 Kossuth. This double gabled bungalow contrasts with the showy houses of earlier decades. Even into the 1940s, fine homes were being built on the hill. Lawrence and James These were well-known local builders in Lafayette at the time and constructed several homes in the district. Some These-built homes cannot be considered contributing buildings due to the 50-year requirement for periods of significance. They do illustrate the continued appeal of this section of Lafayette, however.

Ninth Street Hill is also distinct from other streetcar suburbs of Lafayette in another way. Because the hill developed gradually, a number of its homes evolved over time, creating unique architectural statements. For example, the Wallace House at 907 State was originally an 1850s Greek Revival home. In the 1890s, it was significantly remodeled and Colonial Revival features were added, including a semi-circular bay and classical front porch. The Marshall House at 1014 State was originally an Italianate style house, but was completely transformed into a fine example of Tudor Revival architecture in about 1900. Both homes demonstrate the founding of the hill as a leading suburban area of Lafayette, and its continued popularity. Less dramatic remodelings in the district also show the evolution of the hill from its early years as a refuge from the city to its heyday in the late 19th and early 20th centuries.

Restoration activities in the Ninth Street Hill Historic District are ongoing. The Ball Mansion, for

example, has been well maintained since construction in 1865-69. Descendants of Cyrus Ball still reside in the house. Other homes have received attention in more recent years, after a period of neglect. Removal of artificial siding on some homes has revealed original materials and has improved the quality of resources in the district. Most property owners in the district are well aware of the significance of their property. Ninth Street Hill Neighborhood is the first and only residential district in Lafayette protected by local ordinance. The neighborhood sees National Register designation as the next logical step in fostering the improvement of the area.

Beginning at a point where the south edge of the Norfolk and Southern Railroad right-of-way intersects the west curb of S. 9th Street, then proceed northeast along said right-of-way to the east curb of S. 9th St. Then proceed south along said curb to a point in line with the north property line of 101 S. 9th. Then proceed east along said north property line to the rear property line of 101 S. 9th St., then turn south and follow all the rear lot lines of the properties on the east side of S. 9th St. to a point where the rear lot lines of properties on the north/east side of State St. intersect. Then proceed southeast along the rear lot lines of the properties on the north/east side of State Street, to the northeast corner of the property at 1142 State St. Then proceed southwest along the south/east lot line of 1142 State to the north/east curb of State St. Proceed to the south curb line of Kossuth Street. Then turn west along said curb line to a point in line with the west boundary of 1125 State Street. Then proceed north along said west boundary to a point in line with the north edge of the east-west alley between Elliot, Kossuth, 11th and State. Then turn west and follow said alley edge to the east curb line of 11th St. Then follow said curb line north to a point in line with the north curb line of Elliot St. Then turn west and follow said curb line to a point in line with the west lot line of 1007 State St. Then follow said west lot line north to the rear lot line of 1003 State Street. Then turn west along said rear lot line and follow to the east curb of 10th St. Then proceed north to a point in line with the north edge of the east-west alley between 10th, Elliot, 9th, and State. Follow said alley edge to the west edge of the southern leg of the alley as it turns due south. Then turn south and follow said west edge of said alley south to the north curb of Kossuth Street. Then turn west and follow said north curb line west to a point in line with the west lot line of the property at 714 Kossuth St. Then proceed north along said west lot line to the north lot line of the same property. Then turn east and follow said north line to the east edge of an alley which runs north-south between 7th and 9th. Then proceed north along said east alley edge to the southern dead-end edge of S. 8th Street. Then turn east and proceed to the west lot lines of the properties on S. 9th St. Then turn north along said west lot lines, following to the north curb of Hitt St. Then proceed west along said curb line to the east curb of S. 7th St. Then turn north and follow said curb to the north lot line of 708 Hitt St. Then turn east along said north lot line and follow the north lot lines of properties on Hitt St. to a point in line with the west lot line of 402 S. 9th. Follow the west, and as necessary, north lot lines of properties on S. 9th St. north to the Norfolk and Southern Railroad right-of-way. Then turn northeast and follow said right-of-way to the point of beginning.

**Boundary Justification**

Preliminary recommendation for the establishment of the district's boundaries came from the SHPO-

Tippecanoe County, Indiana*

sponsored Tippecanoe County Interim Report, 1990. The report did suggest that the southern portion of Ninth Street from State to Kossuth be included in another district, called Hilltop. However, the homes along that portion of Ninth have more in common with the larger homes further north on Ninth and on State than with the more typically scaled homes of the Hilltop proposed district. Further south on Ninth Street, the Highland Park Neighborhood Historic District is encountered (NR, 3-14-96). The Ellsworth Historic District (NR, 12-30-86) abuts the north edge of the district. A "hollow" or valley defines the angle of State Street and precluded development along the entire east edge of the district. In short, the district includes as many resources as possible within the theme of development of the hill in Lafayette, without including already listed resources or portions of other listed districts.
