2017-19 Biennial Request Executive Summary

Operating Request

Components of Operating Appropriations Submission

In accordance with the instructions of the Indiana Commission for Higher Education (ICHE) and State Budget Agency (SBA), Indiana University (IU) has submitted performance funding data that will enable ICHE to recommend a change in operating appropriations, rewarding IU for progress toward state goals and desired higher education outcomes. IU also requests fee replacement appropriations required for bond payments for the 2017-19 biennium. This submission also includes requests for modest increases for existing Special Line Item appropriations.

Performance Funding Formula

The performance funding metrics provide funding for changes in each measure over a three-year period rolling average (2010 through 2015). Funding is calculated by comparing the average of 2010 through 2012 to the average of 2013 through 2015. Increases in the three year average are shown in the table below. With the exception of the Master's degree in the 'Overall Degree Completion' and 'High Impact Degree Completion' metrics, IU has achieved positive results on all of the performance funding metrics. Indiana University has experienced declines in the three-year averages of the performance funding metrics for the Master's degree in 'Overall Degree Completion' and 'High Impact Degree Completion' metrics. Generally, fewer individuals are pursuing a Master's degree due to the stronger economic outlook, and, specifically, there are fewer candidates for Master's in Education degrees due to lower enrollments in IU education programs:

- Overall degree completion: this metric rewards increases in the number of degrees completed by resident students.
- At-risk degree completion: this metric provides funding for the change in degrees conferred to at-risk resident students, defined by Pell grant eligibility.
- High impact degree completion: this metric provides funding for increased production of degrees that are granted in Science, Technology, Engineering and Math (STEM) fields as defined by national standards set by Complete College America (CCA).
- Student persistence incentive: this metric applies to all non-research campuses and funds the change in resident undergraduate completion of credit hours at specified intervals.
- On-time graduation rate: this metric provides funding for the change in the graduation rate achieved in four years by resident, undergraduate, first-time, full-time students.

Total Performance Funding Metric Values Submitted for Indiana University

	Overall I	Overall Degree Completion			At-Risk Degree Completion			High Impact Degree Completion		
	2010-12	2010-12 2013-15 Change in 2		2010-12	2013-15	Change in	2010-12	2013-15	Change in	
	3-Year	3-Year	3-Year	3-Year	3-Year	3-Year	3-Year	3-Year	3-Year	
	Avg	Avg	Avg	Avg	Avg	Avg	Avg	Avg	Avg	
Bachelor's	9,609	10,904	1,295	2,569	3,717	1,148	1,387	1,700	313	
Master's	2,475	2,195	(280)				288	273	(15)	
Doctoral	481	496	15				17	23	6	

	Student P	ersistence	Incentive	On -Time Graduation Rate			
	2010-12	2013-15	Change in	2010-12	2013-15	Change in	
	3-Year	3-Year	3-Year	3-Year	3-Year	3-Year	
	Avg	Avg	Avg	Avg	Avg	Avg	
30 Credit Hours Completed	2,729	2,963	234				
60 Credit Hours Completed	2,752	2,850	98				
Bachelor's				2,844	3,481	637	

Note: figures presented in the table above are for all campuses of IU combined; they include negative campus results and, for the on-time metric, total degrees awarded, not the adjusted per unit value used in the Performance Funding Formula.

IU Schools of Medicine and Dentistry

In response to a request by Indiana University and as part of its recommendations for the FY 2013-15 biennium, appropriations for the IU Schools of Medicine and Dentistry were moved "outside" the performance funding formula. The appropriation for these schools was increased by the same percentage increase in total state funds appropriated under the performance funding formula for both the 2013-15 and the 2015-17 biennia. IU requests that this precedent and funding mechanism again be applied for the FY 2017-19 biennium.

Fee Replacement Appropriation

Changes in the total amount of fee replacement requested result from 1) new money debt service for projects authorized by prior General Assembly action and 2) refunding savings on existing debt service. Further changes could result in debt service for projects IU included in its 2017-19 Capital Appropriation Request that are authorized by the General Assembly in the biennial appropriations bill. Estimated debt service for projects authorized by the General Assembly in the biennial appropriations bill or authorized by prior General Assembly action for which debt issuance has not yet occurred, if any, should be taken into account.

Special State Appropriations

IU also receives special state ("line item") appropriations for activities providing unique services to the state. For the existing special line items, IU requests a 2.5% increase in each year of the biennium.

Special State Appropriations

Line Item Schedules BRS XI

^{*}Calculation based on per credit hour formula

Funding for Dual Credit

As a result of the work of the first Dual Credit Advisory Council in 2010, the state provided funding of \$50 per credit hour in return for university's charging no more than \$25 per credit hour in tuition (no tuition for students eligible for free and reduced lunch). Inflation, and especially increased numbers of participants eligible for free tuition, have resulted in greater difficulty meeting costs with \$75 per credit revenue. Indiana University respectfully requests that consideration be given to adjusting the state's funding level upward.

Capital Request

Special R&R Projects

Bloomington Campus - Old Crescent Renovation - Phase III

The top priority for Indiana University is Phase III of the Old Crescent (Academic Core) Renovation on the Bloomington campus. This project, a primary component of the IU Bloomington Master Plan, is the third phase of a multi-phase effort to modernize and rejuvenate the older buildings on the Bloomington campus, commonly referred to as the Old Crescent.

Indiana University proposes to renovate Ballantine Hall, one of the largest academic buildings in the U.S., and as such, a critical part of the Bloomington campus' academic mission. Ballantine

Indiana University EXECUTIVE SUMMARY Page iii

was completed in 1959. Also included will be renovations to Geological Sciences, constructed in 1962, with the Geological Survey portion completed in 1964. Due to their age, these buildings are in need of new, energy-efficient building systems (heating/air conditioning, electrical, plumbing, elevators) and improvements to building envelopes (roof, windows, etc.), as well as accessibility upgrades. Classrooms will be refurbished with the latest technologies and seating arrangements to be as effective as possible.

This project is estimated at \$78,500,000 and is the university's highest priority for 2017-2019.

IU School of Medicine Health Sciences Renovation

Indiana University proposes a renovation of the Health Sciences Building Complex (formerly Wishard Regenstrief) located on the IU School of Medicine Health Science campus in Indianapolis. This project consists of updating administrative space and renovating clinical space into state-of-the art areas with new labs and classrooms for programs in the Fairbanks School of Public Health and the Department of Pediatrics within the IU School of Medicine.

This complex, consisting of Health Sciences (completed in 1975) and Dunlap (completed in 1978), is in need of new interior infrastructure, including energy efficient mechanical systems, upgraded building systems (electrical, plumbing, computer data, and fire suppression), and accessibility upgrades. The exterior of the building will have new energy efficient windows added and the roof repaired. The building façade will be repaired where it previously connected to other buildings.

With proximity to other critical medical practice and research facilities, the Health Sciences Building Complex positions students and faculty in a prime location for a combination of traditional and practical, hands-on learning experiences without losing instruction time to travel. The Fairbanks School of Public Health will benefit from collaborations with nearby IU Health University Hospital, Eskenazi Health, and the Richard L. Roudebush VA Medical Center. Placing the Department of Pediatrics near the Riley Hospital for Children also will educate students most efficiently on how to provide the best possible care for their future patients.

This project is estimated at \$45,000,000 and is the university's second highest priority for 2017-2019.

Regional Campus Deferred Maintenance – Phase III

Indiana University proposes to address deferred maintenance issues currently affecting its regional campuses. The regional campuses at Indiana University (East, Kokomo, Northwest, Southeast and South Bend) have deferred maintenance projects of approximately \$28,500,000. These projects, that will ensure safe and effective learning and work environments for students and faculty, are the university's fourth highest priority for 2017-2019, and include replacements/repairs of building exteriors, campus systems/building systems, and code updates for accessibility and campus safety.

Bloomington Campus – Lab Renovations – Phase II

This project proposes upgrades and renovations to bring Jordan Hall and the Chemistry Building on the Bloomington campus up-to-date with modern standards for lab space and overall building efficiency, as well as occupant safety. This is a continuation of phased renovations of labs on the Bloomington campus that began with the Life Sciences Lab Renovation project.

Jordan Hall was completed in 1955, and Chemistry in 1931 with an addition in 1964. Several laboratories in these buildings are in need of comprehensive infrastructure upgrades and replacements for building efficiency and occupant safety. Mechanical, electrical, and plumbing upgrades, as well as fume hoods and air exchange equipment, are necessary to ensure a modern and safe learning environment. Teaching and research labs will be reconfigured to support multidisciplinary rather than specialized research. These open, noncompartmentalized, shared spaces will allow flexibility in use and encourage collaborative efforts. New technologies, research equipment, and flooring also will assist faculty and students with their objectives.

The university hired a consultant to analyze lab conditions on the Bloomington campus. That assessment determined that many of the older labs are in need of refurbishment in order to better accommodate current technology and equipment, and address issues associated with aging infrastructure. Upgrades and renovations of these facilities would provide a place where students and faculty could realize the university's full vision for collaborative science research in state-of-the-art facilities. These renovations will allow programs in Chemistry and Biology to continue to attract high-caliber research faculty along with their initiatives and funding.

This project is estimated at \$20,000,000 and is the university's fifth highest priority for 2017-2019.

New Construction

IU School of Medicine Research V

The university's third highest priority for 2017-2019 is construction of an approximately 120,000 gsf research facility for the IU School of Medicine near the Methodist Hospital campus in Indianapolis. This project is in conjunction with planned expansion by IU Health at Methodist and is part of the university's continuing life sciences initiative, as well as the Bicentennial Strategic Plan calling for growth in research capacity and generation of external research funding.

Consisting primarily of clinical research labs, with flexible lab space and related support areas, the facility will enable researchers to work across disciplines. This, in turn, can increase funding opportunities and overall academic growth and discoveries. The facility's location near Methodist will support the School of Medicine's goal of creating synergies between research and real-life applications and practice as researchers will be close to patients and their doctors for ease of communication and collaboration.

This project is estimated at \$65,000,000, of which the university is requesting \$40,000,000 in State appropriations support. The remaining \$25,000,000 will be funded by philanthropy and IU School of Medicine Funds.

State Formula R&R Funds

State formula R&R funds, in combination with university funds, are crucial to proper maintenance and repair of Indiana University academic facilities and infrastructure. The following chart summarizes current asset values at each of IU's campuses.

2017-2019 CHE R&R Formula - TOTAL

	R&R Asset Total	
	(based upon Academic	
Indiana University	Space)	Infrastructure Asset Total
Bloomington	\$2,291,456,440	\$284,096,658
East	\$70,353,197	\$8,092,868
Kokomo	\$97,484,130	\$6,019,288
IUPUI (includes IUPU-CO)	\$1,864,442,033	\$66,791,249
Northwest	\$158,563,871	\$12,482,996
South Bend	\$190,469,930	\$12,459,566
Southeast	\$169,522,361	\$19,246,736
IU TOTALS	\$4,842,291,962	\$409,189,361

For the FY 2017-2019 biennium, IU requests state formula R&R funding calculated at 50% of what the formula generates, which would total \$52,514,813 for the biennium. These funds would be matched by university funds.

Project Summary

This project, a primary component of the IU Bloomington Master Plan, is the third phase of a multi-phase effort to modernize and rejuvenate the older buildings on the Bloomington campus, commonly referred to as the Old Crescent. Indiana University proposes to renovate Ballantine Hall, one of the largest academic buildings in the U.S., and as such, a critical part of the Bloomington campus' academic mission. Ballantine was completed in 1959. Also included will be renovations to Geological Sciences, constructed in 1962, with the Geological Survey portion completed in 1964. Due to their age, these buildings are in need of new, energy-efficient building systems (heating/air conditioning, electrical, plumbing, elevators) and improvements to building envelopes (roof, windows, etc.), as well as accessibility upgrades. Classrooms will be refurbished with the latest technologies and seating arrangements to be as effective as possible.

Summary of the Impact on the Educational Attainment of Students

This project will reinvigorate these aging buildings by connecting students with the campus core in newly-renovated facilities that speak to the unique character of the Bloomington campus. Renovations will provide state-of-the-art learning spaces with appropriate safety and infrastructure.

Detail Description of Project

This project, a primary component of the IU Bloomington Master Plan, is the third phase of a multi-phase effort to modernize and rejuvenate the older buildings on the Bloomington campus, commonly referred to as the Old Crescent. Indiana University proposes to renovate Ballantine Hall, one of the largest academic buildings in the U.S., and as such, a critical part of the Bloomington campus' academic mission. Ballantine was completed in 1959. Also included will be renovations to Geological Sciences, constructed in 1962, with the Geological Survey portion completed in 1964. Due to their age, these buildings are in need of new, energy-efficient building systems (heating/air conditioning, electrical, plumbing, elevators) and improvements to building envelopes (roof, windows, etc.), as well as accessibility upgrades. Ballantine Hall relies on numerous window air conditioning units to cool the upper floors; this renovation will eliminate those units and install a centralized, building-wide system. Classrooms will be refurbished with the latest technologies and seating arrangements to be as effective as possible.

Relationship to Other Capital Improvement Projects: This project does not affect any other capital improvement projects.

Historical Significance: This project focuses on Phase III of the Old Crescent (Academic Core) Renovation. This area is the traditional center of campus and contains the oldest buildings in the Indiana University system.

Alternatives Considered: Due to the nature of the project and the specific needs of these buildings, no alternatives have been selected.

Relationship to Long-Term Capital Plan for Indiana University: Renovating the buildings of the campus core is a central component of the 2009 IUB Campus Master Plan and the 2011 Old Crescent Report. These renovations also are part of the university's 10-year plan.

Project Summary

Indiana University proposes a renovation of the Health Sciences Building Complex (formerly Wishard Regenstrief) located on the IU School of Medicine Health Science campus in Indianapolis. This project consists of updating administrative space and renovating clinical space into state-of-the art areas with new labs and classrooms for programs in the Fairbanks School of Public Health and the Department of Pediatrics within the IU School of Medicine.

Summary of the Impact on the Educational Attainment of Students

Renovation of these facilities will further the overall development of the IU Health Science campus on the former Wishard site, and will allow students and faculty to work collaboratively and in close proximity to other critical practice and research facilities. The Interprofessional Education model is an important component in healthcare education, and spaces such as this project proposes provide the best combination of traditional and practical, hands-on learning experiences. This project also will allow the IU School of Medicine to respond to increasing demand for highly-skilled health professionals.

Detail Description of Project

Indiana University proposes a renovation of the Health Sciences Building Complex (formerly Wishard Regenstrief) located on the IU School of Medicine Health Science campus in Indianapolis. This project consists of updating administrative space and renovating clinical space into state-of-the art areas with new labs and classrooms for programs in the Fairbanks School of Public Health and the Department of Pediatrics within the IU School of Medicine.

This complex, consisting of Health Sciences (completed in 1975) and Dunlap (completed in 1978), is in need of new interior infrastructure, including energy efficient mechanical systems, upgraded building systems (electrical, plumbing, computer data, and fire suppression), and accessibility upgrades. The exterior of the building will have new energy efficient windows added and the roof repaired. The building façade will be repaired where it previously connected to other buildings.

Relationship to Other Capital Improvement Projects: This project is part of the overall development of the IU Health Science Campus on the former Wishard site.

Historical Significance: Indiana University does not consider any of the buildings or structures affected by this project to be historically significant.

Alternatives Considered: Renovation of this existing facility in its centralized location on the former Wishard campus was determined to be a more efficient use of space and resources than new construction.

Relationship to Long-Term Capital Plan for Indiana University: This project is consistent with the master plan for the IU Health Sciences Campus in Indianapolis to serve the School of Medicine and related disciplines, and directly supports the university's life sciences initiatives.

Need & Purpose

To continue to recruit and retain top students and faculty, as well as respond to increasing demand for highly-trained health professionals, the IU School of Medicine Health Science campus must have modern facilities and the latest equipment. With proximity to other critical practice and research facilities, the Health Sciences Building Complex positions students and faculty in a prime location for a combination of traditional and practical, hands-on learning experiences without losing instruction time to travel, and supports the Interprofessional Education (IPE) model, an important component in healthcare education. IPE cultivates a team-based approach to patient care in which individuals bring their own specialized knowledge to the group. In collaborative facilities, students are better able to learn about their own as well as other related disciplines to provide the best possible care to their future patients, and establish synergies with peers that will benefit the organizations in which they work through improved delivery of services and patient outcomes. The Fairbanks School of Public Health will benefit from collaborations with nearby IU Health University Hospital, Eskenazi Health, and the Richard L. Roudebush VA Medical Center. Placing the Department of Pediatrics near the Riley Hospital for Children also will educate students most efficiently on how to provide the best possible care for their future patients.

Project Summary

Indiana University proposes to construct an approximately 120,000 gsf research facility for the IU School of Medicine near the Methodist Hospital campus in Indianapolis. This project is in conjunction with planned expansion by IU Health at Methodist and is part of the university's continuing life sciences initiative, as well as the Bicentennial Strategic Plan calling for growth in research capacity and generation of external research funding.

Summary of the Impact on the Educational Attainment of Students

Consisting primarily of clinical research labs, with flexible lab space and related support areas, the facility will enable researchers to work across disciplines. This, in turn, can increase funding opportunities and overall academic growth and discoveries. The facility's location near Methodist will support the School of Medicine's goal of creating synergies between research and real-life applications and practice as researchers will be close to patients and their doctors for ease of communication and collaboration.

Detail Description of Project

Biennium:

Indiana University proposes to construct an approximately 120,000 gsf research facility for the IU School of Medicine near the Methodist Hospital campus in Indianapolis. This project is in conjunction with planned expansion by IU Health at Methodist and is part of the university's continuing life sciences initiative, as well as the Bicentennial Strategic Plan calling for growth in research capacity and generation of external research funding.
Relationship to Other Capital Improvement Projects: This project does not affect any other capital improvement projects.

Historical Significance: This project does not have historical significance.

Alternatives Considered: Due to the nature of the project and the specific needs of this building, no alternatives have been selected.

Relationship to Long-Term Capital Plan for Indiana University: This project is consistent with the master plan for the IU Health Science campus in Indianapolis to serve the School of Medicine and related disciplines, and is included in the university's tenyear plan.

General Project Information

Project Name/Title: Regional Campus Deferred Institutional Priority: 4

Budget Agency Project No: A-0-17-2-04 Project Type: Major Repair and Rehabilitation

Previously Approved by General Assembly:

No Previously Recommended by CHE:

Project Summary

Indiana University proposes to address the continuation of work begun in Phases I and II of the Regional Campus Deferred Maintenance projects approved in 2013 and 2015. The regional campuses of Indiana University (East, Kokomo, Northwest, South Bend, and Southeast) have deferred maintenance projects of approximately \$28,500,000. This funding request will address critically-needed repairs and renovations on these campuses. Building systems on the regional campuses are reaching the end of their useful life and envelopes are in need of maintenance. Projects to ensure safe and effective learning and work environments for students and faculty include replacements/repairs of building exteriors, campus and building systems, and code updates for accessibility and campus safety.

Summary of the Impact on the Educational Attainment of Students

All of these facilities are vitally necessary to the teaching and research mission of these campuses and must be kept functioning at a high level to ensure safe and effective learning and work environments for students and faculty.

Detail Description of Project

Indiana University proposes to address deferred maintenance issues currently affecting its regional campuses. The regional campuses at Indiana University (East, Kokomo, Northwest, South Bend, and Southeast) have deferred maintenance projects of approximately \$28,500,000. Projects to ensure safe and effective learning and work environments for students and faculty include replacements/repairs of building exteriors, campus and building systems, and code updates for accessibility and campus safety.

This project includes:

IU East - [\$2,200,000]

Multi-Building Mechanical Systems Controls Replacement - [\$800,000]

Raper & Hayes Halls Roof Repair & Replacement - [\$1,400,000]

IU Kokomo - [\$4,200,000]

Library Cooling Tower Replacement - [\$200,000]

Main Building Roof Repair & Replacement - [\$1,500,000]

Kelley Student Center Mechanical, Roof, & Windows Replacement - [\$2,500,000]

IU Northwest - [\$12,500,000]

Anderson Library/Conference Center Mechanical & Interior Renovation - [\$12,500,000]

IU South Bend - [\$3,350,000]

Northside Hall Renovate Mechanical System (Units 5 & 6) & Elevator - [\$850,000]

Library Restroom Accessibility Upgrades - [\$1,000,000]

Administration & Wiekamp Exterior Masonry Repairs & Sealing - [\$1,500,000]

IU Southeast - [\$6,250,000]

Chiller 1 & 2 Replacement - [\$2,800,000]

Life Sciences Replace Mechanical System & Controls - [\$2,400,000]

University Center Window Replacement & Roof Repairs - [\$450,000]

Hardscape Sidewalk & Lighting Improvements - [\$600,000]

Relationship to Other Capital Improvement Projects: Each of these projects stands alone. They are not dependent on one another to be effective solutions for addressed building or infrastructure problems. However, these projects are vitally necessary on each campus to provide infrastructure, safety, utility, or other needs.

Historical Significance: This project will have no impact on the historic nature of the buildings or structures.

Project No: A-0-17-2-04

Submitted: Yes Last Updated: 9/2/2016 8:31 AM

Biennium:

2017-2019

Alternatives Considered: All of these projects have options. As design work begins, all alternatives will be considered, and the most appropriate and cost efficient design will be selected. It is the practice of Indiana University to use proven technology to meet challenges of facilities management.

Relationship to Long-Term Capital Plan for Indiana University: This project is part of the university's ten-year plan.

Biennium: 2017-2019 **Project No:** A-0-17-2-04

Submitted: Yes Last Updated: 9/2/2016 8:31 AM

Need & Purpose

·
Building systems on the regional campuses are reaching the end of their useful life and envelopes are in need of maintenance to continue to be effective. All of these facilities are vitally necessary to the teaching and research mission of these campuses and must be kept functioning at a high level. Projects to ensure safe and effective learning and work environments for students and faculty include replacements/repairs of building exteriors, campus and building systems, and code updates for accessibility and campus safety.

Biennium: 2017-2019 **Project No:** A-0-17-2-04

Space Utilization

This project will not change the utilization of space.	

Comparable Projects

Regional Campus Deferred Maintenance - Phase I was estimated at \$29,000.000. Regional Campus Deferred Maintenance - Phase II was estimated at \$27,875,000.

This project is unique. There is no cost per square foot to use as a comparison as most of these projects involve building systems where some components of the systems can be re-used while other components need to be replaced. Also, with the building envelope projects, the buildings are evaluated on a case-by-case basis to determine how much repair must be done.

Background Materials

The Indiana University Board of Trustees approved this project as part of the 2017-19 Capital Appropriation Request at the August 2016 meeting. Indiana University is requesting State cash funding for this project.

Institution: Indiana University-Bloomington Project: Lab Renovations - Phase II

Biennium: 2017-2019 **Project No:** A-1-17-2-05

Submitted: Yes Last Updated: 9/2/2016 8:38 AM

General Project Information

Project Name/Title:	Lab Renovations - Phase II	Institutional Priority:	5
Budget Agency Project No:	A-1-17-2-05	Project Type:	Major Repair and Rehabilitation
Previously Approved by General Assembly:	No	Previously Recommended by CHE:	No

Project Summary

Indiana University proposes upgrades and renovations to bring Jordan Hall and the Chemistry Building on the Bloomington campus up-to-date with modern standards for lab space and overall building efficiency, as well as occupant safety. This is a continuation of phased renovations of labs on the Bloomington campus that began with the Life Sciences Lab Renovation project. Jordan Hall was completed in 1955, and Chemistry in 1931 with an addition in 1964. Several laboratories in these buildings are in need of comprehensive infrastructure upgrades and replacements for building efficiency and occupant safety. Mechanical, electrical, and plumbing upgrades, as well as fume hoods and air exchange equipment, are necessary to ensure a modern and safe learning environment. Teaching and research labs will be reconfigured to support multidisciplinary rather than specialized research. These open, non-compartmentalized, shared spaces will allow flexibility in use and encourage collaborative efforts. New technologies, research equipment, and flooring also will assist faculty and students with their objectives.

Summary of the Impact on the Educational Attainment of Students

The university hired a consultant to analyze lab conditions on the Bloomington campus. That assessment determined that many of the older labs are in need of refurbishment in order to better accommodate current technology and equipment, as address issues associated with aging infrastructure. Upgrades and renovations of these facilities would provide a place where faculty and students could realize the university's full vision for collaborative science research in state-of-the-art facilities. Current lab spaces are designed for one researcher in one lab space; renovations will allow multiple researchers to collaborate on projects in a more flexible, modern, and safe environment. In addition, multidisciplinary research funding requests are strengthened by investigators' ability to cite appropriate, existing lab space in proposals.

GLOBAL NETWORK OPERATIONS CENTER

(Formally known as Abilene Network Operations Center)

Origins and Purpose of the Program

The Global Network Operations Center (GlobalNOC) was formed in 1998 to help Internet2 build a new network to serve the Research and Education community. Indiana University has been delivering high quality network operations center services for Internet2's Abilene network (renamed the Internet2 Network) ever since. Building on the continued investment the state had made in this effort the Network Operations Center has grown from a three-person staff to an organization of more than 85 people who provide carrier grade operations, tools, and network expertise for advanced research and education (R&E) networks.

Today the Global Research Network Operations Center (GlobalNOC) at Indiana University is the premier operational partner for many of the world's most advanced research and education networks. As a member of the very community it serves, the GlobalNOC focuses on the particular requirements of R&E networks. This concentration helps drive science, learning, and humanities developments so its partners can solve the challenges of tomorrow and today. The GlobalNOC teams work to ensure reliability, performance, and advanced capabilities for more than 20 projects.

How the Program Serves Indiana

The appropriation helps support the effort of Indiana University in its support of local and national research and education networking projects. In Indiana, I-Light and all its member institutions, including State Government, are direct recipients of services provided by the GlobalNOC. Network monitoring, security services, troubleshooting, problem resolution and capacity planning are included in these services.

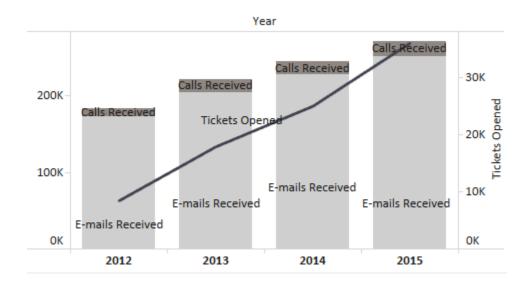

Primary beneficiaries include I-Light, state government, Indiana colleges and universities, national research network organizations, and regional optical networks. Access to reliable network services is critical to providing information in nearly every aspect of business, education and community engagement for the institutions the GlobalNOC supports. In a recent report from the Department of Homeland Security, the data networks which support higher education and state government, is now classified as critical infrastructure. IU understands this, and from our work with national level networks, including the NOAA science network, the GlobalNOC is well prepared to respond to any event which threatens the operation of the state network which supports higher education and state government. The importance of understanding security threats is becoming more critical; the GlobalNOC operates networks which have medium security level and is able to translate those requirements to Indiana universities and colleges. Security analysis and denial of service mitigation is unfortunately a necessity nearly every day at many of our state institutions.

Initiatives & Accomplishments for the Current Biennium

Initiatives and accomplishments of the current biennium include:

- The GlobalNOC was selected to support the National Science Foundation International Research
 Network Connections project. This award (IRNC-NOC) is a 5 year award and is designed to
 support end-to-end performance assurance and researcher support. In addition many of the
 GlobalNOC tools will be utilized to provide a common view of network operational data, usage
 and performance.
- Staffed a second redundant site in Bloomington on the IU campus. This site is able to assume full
 responsibility of all GlobalNOC functions if the Indianapolis location is unable to continue
 operation.
- Supported I-Light in the deployment of the 100GB backbone network upgrade. Created additional monitoring tools and reporting tools.
- Undertook an extensive evaluation for a new Information Management System. ServiceNow was selected as our new product and will be implemented over the next 12 months.

The total headcount within the NOC is 91, with more than 12 open positions. This represents a 15% growth rate since July 2013. An accurate measure of the GlobalNOC growth and activities are clear from a few statistics from our 7X24 service desk which are included in the graph and table below:

	2012	2013	2014	2015
Calls Received	10,624	17,146	17,997	18,972
E-mails Received	173,034	204,510	227,817	251,995
Tickets Opened	8,380	17,835	24,916	35,915

Program Goals for the 2017-19 Biennium

Program goals for the 2017-19 biennium include:

- Review all process and procedures and follow industry ISO/ITL frameworks to create an improved service management effort. This includes vendor/supplier management, change management, process improvement goals and other performance goals.
- Continue to leverage the ongoing investment by the State of Indiana to draw additional support contracts and attract highly skilled staff to the state. With the improving economic conditions, especially in the tech sector, hiring and retention has become one of our largest challenges.
- Add one major new support client.
- Improve quantifiable measures of process and procedures such that the organization could obtain process improvement certification in ISO or other certifying standards.

2017-19 Biennial Operating Appropriation Request

Indiana University requests a 2.5% for each fiscal year of the biennium. This increase will cover increased staffing and operational costs.

CLINICAL AND TRANSLATIONAL SCIENCES INSTITUTE

Origins and Purpose of the Program

The Indiana Clinical and Translational Sciences Institute (CTSI), established in 2008, is a statewide institute created to significantly enhance and coordinate the biomedical research infrastructure in Indiana, providing a statewide laboratory to experiment with innovative methods aimed at transforming life sciences research. The Indiana CTSI is led by the major health science schools at Indiana University (IU), with its two research campuses (Indianapolis – IUPUI; Bloomington - IUB), Purdue University (PU), and the University of Notre Dame (ND).

How the Program Serves Indiana

The mission of the Indiana CTSI is to provide an integrated home for clinical and translational research that creates a statewide infrastructure to provide resources, services, and training to conduct research dedicated to improving the health and economy of Indiana and beyond.

All state residents benefit from the discovery and adoption of biomedical discoveries that promote health, prevent disease, support early diagnosis, and provide effective interventions efficiently. The Indiana CTSI partnerships with clinical and translational investigators, health care organizations, biomedical companies, state agencies, and communities foster the identification of priority health issues to address and provide opportunities and resources to address those issues through evidence-based policies, programs, and services.

New biomedical discoveries at the basic science level are occurring at an extremely rapid pace, but the progression of these new ideas to the market as therapeutic products and the implementation of new findings into routine disease management face significant delays. To overcome this translational gap, Indiana CTSI has built new models to support multidisciplinary research teams with expertise in clinical and translational sciences. Sustaining these models requires streamlined resources, efficient services, and an institutional environment that fosters innovative clinical and translational research (CTR).

Initiatives & Accomplishments for the Current Biennium

The Indiana CTSI opened the Indiana Center for Biomedical Innovation (ICBI) in March 2016. The ICBI is one of a kind in the country that provides fully equipped research laboratories, animal facilities, conference rooms, and office space for the startup companies. Eight companies have projects underway in the ICBI. The Indiana CTSI Patient Engagement Core (PEC) provides services to investigators developing and implementing proposals that need patient engagement or input. The PEC supported 18 research projects for research that has engaged community members across Indiana in the design of research to address high-priority community health needs in the state. The Indiana CTSI partnered with the Indiana State Department of Health to support community-based research projects. The Indiana CTSI Center for Health Innovation and Implementation Science (CHIIS) developed a successful grant from the Centers for Medicare and Medicaid Services (CMS) to implement the Great Lakes Practice Transformation Network (GLPTN). This four year \$46.4 million grant provides assistance to medical practices to identify and implement evidence-based medical care. The GLPTN has recruited over 15,000 physicians serving over 10 million patients. The goal of this nationwide initiative is to improve care and

reduce Medicare, Medicaid, and CHIP expenditures by \$1 billion over the next four years. In addition to the ICBI and CHIIS initiatives, the state funds have continued to support the statewide clinical trials infrastructure, including the Phase I clinical trials unit, which assists the university and business partners pursue commercialization pathways. The funds also support collaborations with Indiana Health Industry Forum (IHIF) to develop mentoring programs for Indiana startups.

During the year, the Indiana CTSI provided service to nearly 1,400 individuals including 116 investigators at IUB; 795 at IUPUI/IUSM; 176 at Purdue, and 44 at Notre Dame. In addition, the Indiana CTSI provided services to over 250 other individuals, organizations, and businesses. Service utilization for CY 2015 was over 2,200 units of service. Indiana CTSI institutions and supported investigators were responsible for over \$184 million in NIH funding to support research and programs to advance health and medical science. Additional data for services provided are included in the appendix.

The Indiana CTSI is partnering with the Indiana Biomedical Research Institute (IBRI) to support the expansion of high-quality research into metabolic disorders over the next several years. The Indiana CTSI has also established a partnership with Parkview Hospital, Fort Wayne involving a project development team like process to review proposals to use institutional pilot grant funds, increased opportunities to participate in clinical studies, and access to Indiana CTSI core services. Additionally, the partnership can provide enhanced research opportunities for faculty and students at the IUSM campus at IUPU Fort Wayne.

Program Goals for the 2017-19 Biennium

The Indiana CTSI plans initiatives to start, expand, or enhance program services in the following areas over the next biennium:

- The Indiana CTSI will continue to expand experiential training opportunities for new clinical and translational investigators and support for entrepreneurship to facilitate the movement of research discoveries into medical practice and commercializable products and services.
- Efforts to streamline the support process for clinical and translational research will continue to minimize delays to and costs for the conduct of research.
- The Community Health Engagement Program will continue to expand its partnerships with communities seeking to address local health issues. These efforts will include expanded use of Cooperative Extension community educators from Purdue.

Utilization of Indiana CTSI services is investigator driven and service utilization has increased nearly every year since inception of the Indiana CTSI. The CTSI will expand efforts to facilitate movement of best practices into clinical practice through the GLPTN and expanded innovation seminars in CHIIS.

2017-19 Biennial Operating Appropriation Request

Indiana University requests a 2.5% for each fiscal year of the biennium. This request will cover cost increases in compensation and general expense.

INDIANA GEOLOGICAL SURVEY

Origins and Purpose of the Program

Indiana Geological Survey (IGS), codified in IC 21-47-2, has the mission of providing unbiased, authoritative, and reliable geological information to the state's citizens. The IGS generates and disseminates information about the energy, mineral, and water resources of Indiana, as well as promoting their sustainable use. To accomplish this mission, the Indiana Geological Survey engages in:

- Focused research initiatives and cooperative investigations with governmental agencies, municipalities, businesses and industries, and education organizations at all levels;
- Geologic sample and data collection that are processed, summarized, and archived for continued and future reference; and
- Dissemination of information in many forms and media, including published research, print, digital, and online interactive maps, reports, databases, and education outreach programs.

These activities fulfill a crucial part of the public service mission of Indiana University by addressing Indiana's need for geologic data and geological information in light of complex and evolving economic and societal needs. Moreover, the IGS mentors and employs students to prepare them to be the next generation of earth scientists.

How the Program Serves Indiana

The work of the IGS serves Indiana's citizens directly or indirectly by contributing to the orderly development and use of the state's water, mineral, and energy resources, by providing answers to environmental questions or via educational programs that reach all age groups of Hoosiers. Businesses, municipalities, and governmental agencies receive geological information vital to their operations. These groups include land and minerals owners; coal, petroleum, aggregate and building-stone industries; city and county administrators and planners, and various Indiana governmental agencies, including the Departments of Natural Resources, Environmental Management, Homeland Security, and Transportation; the Board of Health; and State Chemist. Thousands of information requests from the general public are handled personally with reference to available maps, reports, and data.

Outreach efforts include assisting with IU's undergraduate and graduate instruction and advising, the Mini University program, Indiana Master Naturalist Program, and various events that occur throughout the year, such as the Hoosier Association of Science Teachers annual convention, Science Olympiad, Indiana GIS Conference, and Earth Science Week. As one measure of the success of IGS outreach, the average annual number of visitors to the IGS website now totals nearly 300,000, where these individuals download approximately one million page views of information. A website managed by the IGS, *IndianaMap.org*, generates nearly 1,000 custom maps per day.

Initiatives & Accomplishments for the Current Biennium

Among its many and diverse activities, the following provides a sample of the range and depth of IGS efforts:

• The IGS Indiana Shallow Geothermal Monitoring Network, a test bed for facilitating the optimization of geothermal heat pumps in the Midwest was re-christened "the Indiana Water

Balance Network" and repurposed to monitor long-term trends for multiple components of the hydrologic budget (e.g., evapotranspiration, soil moisture, and groundwater elevation) for 12 sites in Indiana. This information gives Indiana a better understanding of the state's water resources

- The IGS continued its mapping excellence in the state with the release of *Indiana*—a new 1:500,000-scale state map that features the latest high-resolution LiDAR elevation data. The map provides a highly detailed depiction of the diverse landscapes of Indiana. Two new statewide-scale maps were developed that show the relative risk of Indiana's aquifers to contamination and identify the locations where water, and therefore, potential contaminants applied at or near the ground surface, are expected to rapidly infiltrate into the subsurface. And lastly, two maps were created that show the elevation of the bedrock surface and the thickness of unconsolidated deposits overlying the bedrock. All of these maps are now part of the collective suite of *IndianaMAP* and *IGSMap* digital products. A cooperatively funded project between the IGS and USGS continues IGS mapping efforts northward from Lawrence and Monroe Counties to join completed mapping in Marion County. The decision to map this area was, in part, prompted by the northward construction of U.S. Interstate 69 through Morgan County.
- The IGS Earthquake Simulator completed its fourth and fifth years of operation, educating more than 10,000 Hoosiers about the risk of earthquakes in Indiana and preventable measures to take in the event of an earthquake,

Program Goals for the FY 2017-19 Biennium

Plans include continuing many ongoing programs of directed research and education. Among them, the following projects display the depth and variety of activities of the IGS scientists and staff:

- If appropriated, establish a Water Resources Division in the IGS. Water resource needs of the state of Indiana that were legislated in the Water Resource Management Act of 1983 are not being fulfilled. The IGS will take on the effort to assess water resource availability by mapping aquifer basins and adding long-term monitoring of water quality and quantity.
- IndianaMAP, one of the nation's leading Web-based geographic information systems is supported almost entirely by IGS appropriation. Efforts will be redoubled to find a funding mechanism to sustain this valuable Indiana resource and revamp its public interface.
- Geologic and computational mapping of Indiana at appropriate scales, where such information
 will be immediately used to protect surface and groundwater from contamination, plan
 transportation corridors and infrastructure, identify geologic hazards, and sustainably develop
 the state's mineral, energy, and water resources.
- Expanded outreach in the form of K-12 and undergraduate classroom presentations, continuing education programs, short courses, and public lectures.
- Rapid and convenient dissemination of geological information to individuals who use it in support of Indiana's economy and workforce, accomplished by providing access to geologic samples and collections, onsite visits, and Web-accessed databases.

2017-19 Biennial Operating Appropriation Request

Indiana University requests a 2.5% for each fiscal year of the biennium. This request will cover cost increases in compensation and general expense.

I-LIGHT NETWORK

Origins and Purpose of the Program

I-Light, codified in IC 8-1-32.7-3, celebrated its 10th anniversary of operations this year. While the State of Indiana initially built the I-Light fiber network to connect its primary research universities of Indiana University Bloomington, Purdue University West Lafayette, and the joint campus in Indianapolis, today nearly all colleges and universities in the state are connected to the I-Light network. The network has proven its value in helping to grow research and education funding through high performance computing, competitive research grant success in Life Sciences and Engineering, connections to the Internet2, NOAA, and the National Lambda Rail networks, and favorable economics with the Indiana GigaPOP for the State to efficiently pool network traffic. Connected schools have access to the same resources at the same pricing structure as every other school; the playing field is level in this regard.

How the Program Serves Indiana

I-Light, operated solely for the good of its membership, is a dedicated high performance data network which supports advanced applications, access to national and international research resources. Members use I-Light to directly connect to other members for research or to advance academic opportunities. Members have also successfully used I-Light to reach peer institutions nationally and internationally to partner on federally funded research projects. I-Light member institutions who have not traditionally received federal funding to support networking infrastructure received approximately \$500,000 to improve campus network infrastructure. The success of the awards was directly attributed to being connected to the I-Light network.

I-Light is limited by state statute to support only higher education, related research, and State Government. Connected locations include: 71 institutions of higher education; 28 Ivy Tech locations; 18 State Government, including the State Police, FSSA offices, BMV locations; and 5 Public Broadcasting Stations. Details are contained in the tables below.

Higher Education needs for high performance network resources are different than those available by common carriers. In addition to an overabundance of bandwidth on an as needed basis, the Research and Education community need for specialized end to end technologies such as multi-cast, IPV6, perfSONAR test facilities and OpenFlow enabled networks are not commonly available from the commercial sector. As more institutions vie for federal research funding, having an advanced network is a requirement to be competitive. We have been told by our membership not having I-Light services available to their campus would be a competitive disadvantage. Conservative estimates show the initial I-Light network connecting Indiana University, Purdue and IUPUI has directly contributed to over \$250M in grant activity. The continuing and active goal of I-Light is to have more institutions participate in grant opportunities. We know this improves the educational opportunities for students and facility and draws talented individuals to Indiana to study and teach.

Initiatives & Accomplishments for the Current Biennium

- All Indiana PBS stations are all connected to I-Light directly by fiber or through campus connectivity.
- Notre Dame has upgraded to 100G on I-Light to support their High Performance Computing (HPC) initiative.
- A New Albany to Evansville 10GB link has been completed and is in production. This link will be upgraded to 100GB in the upcoming budget cycle.
- Multiple "above the network" services are available to members of the I-Light network. A partial list includes:
 - Disaster recovery services
 - Cloud data hosting
 - VOIP/SIP voice services
 - Redundant connections
 - IPv6 wireless network implementation

- Capacity planning services
- BGP Peering
- Router and firewall upgrade consulting
- Video conferencing solutions
 - Science DMZ and perfSONAR data performance monitoring

Program Goals for the 2017-19 Biennium

Program goals for the 2017-19 Biennium include:

- Complete the 100GB backbone upgrade 100G direct member connections over the new network.
- Finalize a direct network relationship with the Energy Sciences Network (EsNet), which will allow
 institutions in Indiana to have access to the Large Hadron Collider (LHC) in Switzerland. I-Light is
 working with OARnet, the Ohio State Research and Education network to set up direct
 peering/connection relationship. This will greatly improve connectivity between the two
 networks.
- Since the colleges and universities are already connected, new connections will come from any additional needs that IOT has or as we find diverse connectivity options for our members.
- I-Light is deploying 6 perfSONAR nodes at selected member locations (Butler, Notre Dame, Ivy Tech, Oakland City, DePauw and Indiana State University). If this trial goes well, we plan to deploy these management nodes at all I-Light college and university member locations.

2017-19 Biennial Operating Appropriation Request

Indiana University requests a 2.5% for each fiscal year of the biennium. This increase will support the increased cost of staff and initiatives like perfSONAR deployment and data privacy/security training.

INDIANA GIGAPOP

Origins and Purpose of the Program

With state financial support, the Indiana GigaPOP was created in 1999 by Indiana University and Purdue University to support the growth, access and connectivity of Indiana institutions to national research and education networks and to other universities in Indiana and across the country. Since its inception, available resources have expanded to include direct access to international research networks, federal science networks supported by the Department of Energy, National Oceanic Atmospheric Administration (NOAA) and to every state education network in the US.

The Indiana GigaPOP maintains a physical connection to the largest research and education network in the US, the Internet2 Network, at their node in Indianapolis utilizing the I-Light fiber infrastructure. This configuration provides direct access to the Internet2 network and for qualifying participant institutions access to multiple Commodity Internet Service providers.

How the Program Serves Indiana

Not only does the Indiana GigaPOP support access to research networks for the Indiana large research universities but it does so for every education institution in Indiana. The smallest private college has essentially the same access to national and international networking resources as Purdue or Indiana University. Cost for services are geographic independent, that is to say every school pays the same rate regardless of where in Indiana they are located.

In addition, the Indiana GigaPOP provides extremely cost effective access to commodity Internet services. As a member of the largest national organization of regional network operators, the GigaPOP has direct access to group purchase pricing. Direct connectivity to local service providers in Indianapolis provides redundant services for all users of the service.

Connecting to the national research networks and the community they support allows Indiana universities and colleges to be competitive in grant funded opportunities. There is a direct correlation to network capacity and the ability to apply for specific funding opportunities. The Indiana GigaPOP recognizes this, and was the first in the nation to build and operate a 100GB state network connection to the national research infrastructure. The Monon100 connection operates today for the benefit of every institution in Indiana.

Initiatives & Accomplishments for the Current Biennium

Initiatives and accomplishments of the current biennium include:

• In 2013, the Indiana GigaPOP launched the Monon100 project, a new 100Gigabit per second link from Indianapolis to the Internet2 network. This was the first 100G connection to Internet2, and provided a 10x performance increase, available for all of the Indiana GigaPOP connected institutions, including IU, Purdue, Notre Dame, NCAA, and all I-Light connected universities.

- In the last year, Indiana GigaPOP engineers also helped several of the state's PBS stations, providing expert network consulting help so that they could take advantage of the state's networking options.
- GigaPOP core routers were upgraded to allow for 100G connections for Notre Dame, IU, Purdue and I-Light.
- Through increased use of new cost-free peering agreements with Google, Netflix, and Akamai, along with improved private commercial internet agreements, the GigaPOP oversaw a 65% drop in commodity internet pricing for all of its members.
- In FY 2015-2016, two colleges, along with IU Regional campuses, all received National Science Foundation awards to improve campus networking infrastructure. The relationship with I-Light was cited by National Science Foundation reviewers as key to these successful awards.

Indiana GigaPOP service metrics include the following:

- Total available Bandwidth (Internet2): 210Gigabits per second
- Total available Bandwidth (CIC) 100Gigabits per second
- Total available Bandwidth (Commercial Internet): 80Gigabits per second
- Total connections: 29

Program Goals for the 2017-19 Biennium

- To improve reliability, cost, and performance of resources for Indiana universities, the Indiana GigaPOP will be exploring additional fiber paths from South Bend into Chicago. This will open up reliable access to additional low cost commercial internet providers and allow for more collaboration with other schools in the Big Ten, who have networking into Chicago.
- We will also explore new additional connections with like institutions in Ohio and Kentucky. These new connections would allow for additional collaboration or sharing of resources.
- Indiana GigaPOP Engineers will continue to offer network design consultation for schools in the state, to help them with high performance networking.

Quantifiable Service Goals include:

- Additional 10% drop in commercial internet pricing
- Growth of 30% in bandwidth usage

2017-19 Biennial Operating Appropriation Request

Indiana University requests a 2.5% for each fiscal year of the biennium. This increase will be used to cover increased hardware maintenance contract costs, materials and travel associated with this service.

INSTITUTE FOR THE STUDY OF DEVELOPMENTAL DISABILITIES

Origins and Purpose of the Program

The Indiana Institute on Disability and Community (IIDC) was established by the Trustees at Indiana University in 1969 and its facilities built in 1970 with funding from the U. S. Department of Health and Human Services. This was the result of the Developmental Disabilities and Assistance Act of 1963, signed by President John F. Kennedy. The Institute has been recognized with an appropriation from the Indiana Legislature since 1969. The Institute's plans fully align with the Indiana University Bloomington Campus Strategic Plan in particular related to interdisciplinary graduate studies, applied research, and new collaborations especially in health sciences.

The Mission of the Indiana Institute on Disability and Community is to work with communities to welcome, value, and support the meaningful participation of people of all ages and abilities through research, education, and service.

How the Program Serves Indiana

The IIDC primarily exists to serve the state and its residents regarding disability issues. As a result of current economic shifts, schools and communities are being called upon to do more – with fewer financial resources. People with disabilities, of all ages, are a part of these communities, yet the costs associated with students and adults with disabilities have come to public attention and concern.

The Institute provides information, training, research and other services to schools, government agencies and organizations statewide (see attached). These activities are aimed at helping make schools, businesses, and communities inclusive of people of all ages and abilities.

As a result, schools and communities are seeking to "do better" with less funding and the Institute is meeting the challenge to respond to such needs. Specifically, IIDC is helping increase the employment rate of people with disabilities, addressing the learning needs of the large increase in the number of students with autism, and evaluating teacher effectiveness in terms of student growth and learning.

It is the work of the Institute to engage in the research, education, and service that benefits Indiana. The following is a list of services being asked of the IIDC:

- Schools would like to deliver effective early education for all children, to develop methods for including children with autism, and to insure that all young people transition from high school to post-secondary education or employment.
- Schools would also like to develop methods of universal design in teaching that benefits all, train teachers to be fluent in the best technologies and instructional methods known, and evaluate teacher performance in light of student achievement.
- Communities are asking how to use technological advances to eliminate barriers to learning and employment, to fully integrate all people with disabilities in all aspects of community life, and to address health disparities of people with disabilities.
- Employers and non-profit agencies are asking how to include people with disabilities in their work force and train staff to deliver the best known supports.

Policy makers are asking for research from other states and countries on creative and effective
policy and practice for cost effective community structures, outcome data systems for
improving quality of life, and methods of funding outcomes beyond funding for services.

The Institute's training and technical assistance activities touch thousands of Hoosiers, conducting more than 625 training events involving more than 48,900 people during 2014-15. The Institute provided nearly 6,200 hours of training and technical assistance to schools, community agencies, and government agencies and its website has over 4,000 pages viewed by over 705,000 users (attached to this report is a listing of organizations and agencies served in Indiana).

The Institute's scholarly and knowledge translation publications record demonstrate its research in these areas. The pre-service and in-service education and coursework, and graduate student mentoring (19 students just this year), and including more than 1,093 student credit hours in teaching graduate and undergraduate courses, show the Institute's education role in Indiana and at Indiana University. Finally, participation in policy work committees and implementation with government and state leaders in education and community demonstrates the Institute's state service.

Initiatives & Accomplishments for the Current Biennium

Recently the Institute has established needed and innovative leadership in several ways, including:

- A quality review system of Indiana's First Steps Early Intervention Program for infants and children with disabilities, addressing 51 programs statewide.
- The Indiana Teacher Appraisal and Support System, a way to evaluate the effectiveness of all teachers related to improving student outcomes, is being implemented in 15 school districts.
- The creation of Positive Behavior Intervention and Supports in 5 school districts for students with autism and intellectual or developmental disabilities.
- Establishing post-secondary education opportunities for students with intellectual disabilities in Institutions of Higher Education in Indiana. Seven colleges and universities in Indiana have such programs.
- The creation of Autism Education Training Teams in 41 school districts in Indiana, adding to the 428 teams statewide.
- The creation of the Indiana State Professional Development Grant: Indiana Center on Teacher Quality soon to be working in school districts across Indiana.

Program Goals for the 2017-19 Biennium

In addition to the expansion of initiatives noted above, the Institute will:

- Develop new collaboration for personnel development in health sciences, through the Health Sciences Council and the (to be developed) Regional Academic Health Center.
- Address Indiana's database and data analysis needs in early childhood programs and needs in employment and home supports

The Indiana Institute on Disability and Community is designed for "research to practice" with its mission defined in both knowledge development and practical application of human service ideas. Finally, the Indiana Institute on Disability and Community addresses issues of concern to the Legislative Commission on Developmental Disabilities and the Legislative Commission on Autism.

2017-19 Biennial Operating Appropriation Request

Indiana University requests a 2.5% for each fiscal year of the biennium. This increase will cover increased staffing and operational costs.

INDIANA ADVISORY COMMISSION ON INTERGOVERNMENTAL RELATIONS

Origins and Purpose of the Program

The Indiana Advisory Commission on Intergovernmental Relations (IACIR) was established by the General Assembly to provide a forum for discussion and planning in light of increasing demands made on state and local governments. IC 4-23-24.2-12 names the Indiana University Center for Urban Policy and the Environment (Center) to staff and administer the Commission. The Center, as part of the IU Public Policy Institute and the School of Public and Environmental Affairs, brings to the IACIR a strong reputation for merging policy analysis research with the experience of practitioners to develop pragmatic solutions for state and local governments in Indiana.

How the Program Serves Indiana

Since its inception in 1995, the IACIR has undertaken numerous efforts to improve intergovernmental decision-making and to provide an ongoing forum for discussion and resolution of intergovernmental problems and concerns. The commission's work has included a periodic survey of local governments and series of studies and public forums on several important issues facing Indiana's local governments and citizens, including: annexation, the implementation of the new property tax assessment and appeals procedures, estimates of needed investments in water and wastewater infrastructure, and progress in reforming 911 funding and county level service consolidation.

Initiatives & Accomplishments for the Current Biennium

IACIR's most recent work includes the following projects begun in the first year of the current biennium (2015-16):

- Preparation for the 2016 survey of local governments.
- Study of tools to ensure tax fairness and the ability of local government to provide and fund local services, including discussion of minimum property taxes, adjusting property assessment rules for nonprofits, enhancing the ability of local government to assess service fees/payments in lieu of taxes, and review of the Classified Forest Program.
- Study of the current tools available to local governments for improved efficiency and effectiveness and way to encourage utilization, including inter-local agreements, joint purchasing, local government structural and service consolidation, contracting, and public private partnerships (P3).
- 2015 Water and Wastewater Financial Needs Update (Phase I).
- Study of Local Fire and EMS Services with a focus, in part, on the challenges facing the volunteer fire service.

Projects for the second year of the current biennium (2016-17) will include:

• Continued discussions of tools to ensure tax fairness and the ability of local government to provide and fund local services.

- 2016 Water and Wastewater Financial Needs Update (Phase II).
- Completion of Local Fire and EMS Services study.
- Any additional priorities identified by legislative leadership and the commission chair and membership.

Program Goals for the 2017-19 Biennium

As in its first 21 years, the IACIR is poised to provide research as well as a discussion forum for complex issues affecting state and local government. The IACIR anticipates several initiatives during the upcoming biennium (2017-19), including:

- Providing a forum for research and discussion of current intergovernmental and local government issues, particularly those identified by legislative leadership and the commission chair and membership;
- Continuing work on additional issues regarding local public safety structure and service costs;
- Conducting the biennial survey of local governments in summer 2018.

In the current and upcoming biennia, the commission and its staff remain available to complete work assigned by the Indiana General Assembly and the Legislative Council. In years past, the commission completed an extensive study on annexation requested by the Legislative Council, and more recently, the commission was assigned to study local government responsibilities for 911/e-911 services.

2017-19 Biennial Operating Appropriation Request

Indiana University requests a 2.5% for each fiscal year of the biennium. This increase will cover increased staffing costs.

SPINAL CORD AND HEAD INJURY RESEARCH

Origins and Purpose of the Program

The Spinal Cord and Head Injury Research Center administered by the Department of Neurological Surgery of the IU School of Medicine was created in 1999 with an appropriation from the State of Indiana. The program collaborates with the Purdue Veterinary School Center for Paralysis Research, which also received the same appropriation. The two Centers have expanded their ongoing collaborations in recent years with the addition of new researchers and projects.

How the Program Serves Indiana

The program supports basic, translational, and clinical research programs in spinal cord and head injury which advance knowledge of the fundamental mechanisms of injury and recovery as well as exploring potential new therapeutic and recovery strategies for citizens of Indiana who have suffered traumatic brain and/or spinal cord injury and their families. With approximately 20,000 documented traumatic injuries occurring in Indiana per year, new approaches to prevention, mitigation, and rehabilitation leveraged through research efforts of the program are critical. Furthermore, the IU School of Medicine (IUSM) has gained a national reputation as a premiere center of excellence for brain injury and concussion research and treatment and, as the only academic medical center in the state, is vital to the health of its citizens.

Initiatives & Accomplishments for the Current Biennium

Major program accomplishments include:

- Infrastructure and Leadership: Indiana University Health (IUH) and Indiana University (IU) have established a groundbreaking Neuroscience Center. The center is a two building complex housing outpatient clinics and faculty for the Departments of Neurology, Neurological Surgery, Psychiatry, Otolargyngology, Radiology, and Physical Medicine & Rehabilitation (Goodman Hall) and a unique translational laboratory building (Neurosciences Research Building) with novel design features specifically purposed for neurotrauma research. Nicholas Barbaro, MD, the Chair of the Department of Neurological Surgery also serves as Medical Director of the Neuroscience Center. Bruce Lamb, PhD, an internationally recognized researcher in both neurodegenerative disorders and neurotrauma mechanisms was recently recruited from the Cleveland Clinic as the new Executive Director of the Stark Neurosciences Research Institute (SNRI), the lead unit in the research building. The Spinal Cord and Brain Injury Research Group in the SNRI headed by Xiao-Ming Xu, MD, PhD, Hulman Research Chair of Neurological Surgery, leads basic research efforts in neurotrauma. Over this biennium the group has grown to 20 investigators plus several fellows and graduate students and has published over 60 peerreviewed research articles. Finally, Tom McAllister, MD, recruited from Dartmouth Medical School as the Chair of the Department of Psychiatry is an international expert in research and treatment of concussion, and has secured major new extramural research funding in this highprofile issue in team sports.
- <u>Clinical Program Update</u>: **Richard (Ben) Rodgers, MD,** in Neurological Surgery heads our clinical research effort in Traumatic Brain Injury (TBI) involving advanced imaging and biomarker

- discovery in partnership with **Andy Saykin**, **PsyD**, in Radiology. Imaging and biospecimens are collected from neurotrauma patients at IUH sites throughout the state. **Eric Horn**, **MD**, **PhD**, and Rodgers also advanced a clinical study of the efficacy of progesterone in Spinal Cord Injury (SCI). In partnership with Biomedical Engineering at Purdue, clinicians in the Department of Neurological Surgery are exploring implantable programmable microcircuits for potential therapeutic applications in patients with a variety of brain and spinal cord disorders.
- <u>Return on Investment:</u> The state support is important for building and expanding this program through associated core facilities and personnel which are leveraged for extramural support. The investigators in the program have secured \$6.5M in extramural funding from the NIH. Additionally, Dr. McAllister was recently awarded a \$30M grant from the Department of Defense and the NCAA to lead a multi-institutional study of concussion mechanisms including advanced imaging and molecular genetics. Finally, Dr. Xu has recently secured a prestigious IUPUI Signature Center in Spinal Cord Injury Research which adds to another Signature Center on Brain Recovery and Imaging.

Program Goals for the 2017-19 Biennium

Program goals for the 2017-19 Biennium include:

- <u>Basic and Translational Science</u>: Maintenance of critical core facilities (e.g. Rodent Surgical Core, Behavioral Core, Multi-Photon Imagine Core, Histology Core) utilized by all investigators in the center. Implementation of an additional core - *In Vivo Electrophysiology Core*. This new core will facilitate detailed assessment of recovery of neurological activity and accelerate the assessment of brain injury and recovery.
- Clinical Research Program: Dr. Rodgers will continue to lead the clinical research initiative that seeks to gather functional, neurochemical, imaging, and genomic data from all neurotrauma patients seen by the Goodman-Campbell neurosurgical practice of IU Health. This initiative will provide both data and coordinated access to clinical researchers throughout Indiana and, in particular, the IU Health network of hospitals. Research involving this emerging dataset will be coordinated with the basic science group to focus on the most promising avenues for therapeutic discovery in human neurotrauma.
- Education: Our goal is to increase the number of IU School of Medicine students and resident trainees involved in research on brain and spinal cord injury. A recently authorized increase the number of neurosurgical residents in the program reflects the strong clinical and educational environment provided in the IU Health system. In addition, a relatively large number of IU School of Medicine students enter the field of neurosurgery each year. All of these trainees are encouraged to work in research laboratories. Also planned is an advanced graduate level elective course in neurotrauma and concussion.

2017-19 Biennial Operating Appropriation Request

Indiana University requests a 2.5% for each fiscal year of the biennium. This increase will cover increased staffing and operational costs.

Indiana University System: Spinal Cord and Head Injury Research
