**Subject:** RE: Storm water and silt in front of mailbox again!

Good afternoon,  
Mr. Copas,

It was great to see you at the construction site this afternoon. As I mentioned to you before as well as today, we are agree from day one that stormwater and runoff at and from the construction site is an issue and it is has been an issue for several years. What is different now is all the silt coming out from the uncover ground that is eroded out and migrate to the existing ditches and the road. This situation, show us a really poor construction site management practice. Since the erosion at the site has not been controlled professionally, it has filled up the existing ditch along the road and goes to the road itself. So, excuses for the road not having a ditch line is not accepted, since it was there but now is filled up with mud and silt. Likewise. the existing driveway for ingress and egress to the site is very poor constructed and needs more rocks/gravel to prevent your vehicle carrying mud to the road as well. The requested pipe to be placed at the second entrance has not been installed yet. The existing pipe at the driveway entrance has a not been properly installed for drainage, it needs to be placed properly.

Mr. Copas, you have been notified about the situation in several occasions, can you please take care of all these issues? It is my intention to request to the Stormwater Board a STOP WORK order to be set in place until you take care of all of the county concern expressed to you on this e-mail and previous e-mails.

Should you have any question, do not hesitate to let us know.

Sincerely,

Horacio Urieta, PE.
