## **EXECUTIVE SUMMARY**

---

## EXECUTIVE SUMMARY

This Boat Ramp Site Study for Harrison County provides information necessary for Harrison County to determine the location and economic feasibility of two public boat ramps and possible further site development along the Ohio River. Approximately 9 miles of riverfront parcels along the Ohio River were analyzed for potential boat ramp sites.

Two areas of interest were the main focus because of their proximity to passing motorists and population centers. This narrowed the number of prospective sites to a reasonable amount, while still allowing the County to consider a variety of sites.

The County's main focus is to create a site that is conveniently located with suitable facilities that will encourage boaters from the surrounding area and passers-by to utilize the proposed facilities and potentially stimulate the local economy. By choosing two sites in different areas, and developing the site beyond a boat ramp, the County hopes to reach a variety of citizens.

Two sites are recommended for a public boat ramp. An opinion of probable cost was developed for each of the recommended sites. Section 6 provides a breakdown of the opinion of probable cost by feature.

The first site is located immediately south of the Junction of State Road (SR) 211 and SR 111. The site's location and large land area make it an appealing site for a boat ramp with multiple added facilities. The cost for this site was broken down in to two parts, the boat ramp side and the campground side. The boat ramp side would feature angled/pull-through parking spots, a make-ready/tie-down area, a wide boat ramp, two sports fields with additional parking, restrooms, a shelter house, a playground area, and room for concessions. The opinion of probable cost for this area is \$1,874,835 including land acquisition costs. The campground portion of this site would have a campground and restrooms. The opinion of probable cost for this area is \$910,085

The second recommended site is just upstream of the existing boat ramp in the Town of Mauckport (Mauckport). With the site's location in the Town of Mauckport and smaller land area, this site would do well with a boat ramp and a few smaller facilities. This site would feature pull-through parking spots, a wide boat ramp, additional parking, a shelter house, a playground, and restrooms. The opinion of probable cost is \$620,629.

One site is recommended for campground use only, which is Site 11. Site 11 is approximately 0.25 miles downstream from the existing boat ramp in Mauckport. The site contains ample area for a nice sized campground, and is just outside Mauckport. The site design includes a restroom, a small parking lot, an access road, and camping sites. The opinion of probable cost is \$1,173,264.

**SECTION 1  
PROJECT LOCATION**

---

## 1.01 PROJECT

Harrison County's southern border consists of 45 miles along the Ohio River. The Town of Mauckport (Mauckport) Boat Ramp is the only public boat ramp along this stretch of river and is currently not well maintained. Harrison County wants to build two boat ramps along the river to promote County citizens and those in the surrounding metropolitan area to utilize the recreational resources of Harrison County. The County also wants to consider further developments along with the boat ramp that will encourage people other than boaters to utilize the facilities.

## 1.02 LOCATION

Harrison County is located along the southern border of Indiana halfway between the eastern and western borders of the state. It is bordered by the Ohio River all along the southern edge. Figure 1.02-1 shows the location of the county in relation to the state.

Based on major roads, towns, river flow, and tourist attractions, two areas of interest were chosen to focus the site investigation, which are shown in Figure 1.02-2.

The northern area is focused at the junction of State Road (SR) 211 and SR 111 in Posey Township. This area contains approximately 4.5 miles of shore extending north to include the area just south of Horseshoe Southern Indiana Casino (previously Caesars Indiana Casino).

The southern focus area is around Mauckport in Heth Township. This area contains approximately 4.25 miles of shore extending southeast to Morvins Landing Road. SR 135 crosses over the Ohio River into Kentucky just southeast of Mauckport.

## 1.03 PROJECT DESCRIPTION

The project is located within Posey and Heth Townships. The study is focused on two areas with the potential for two boat ramps.

Harrison County wants to develop beyond just a boat ramp in the northern project area. Other amenities considered include a fishing area, a shelterhouse, a playground, restroom facilities, a walking path, sports fields, an amphitheater, a concessions area, and a camping area. Sites of 20 acres and over would be sufficient.

Harrison County is looking for a smaller development in the southern project area. Possible amenities would include a boat ramp, parking area, shelterhouse, and playground. Sites that are 20 acres in area and smaller should be sufficient.

## 1.04 PROJECT AREA

In the northern project area, Site 5 is recommended. Site 5 is 67.9 acres located immediately south of the intersection of SR 211 and SR 111. The parcel contains land area on the east and west side of SR 111 in Posey Township. The site has approximately 0.22 miles of shoreline and 0.22 miles of road frontage (SR 111).

In the southern project area, Site 10 is recommended. Site 10 is located in Mauckport off the corner of Main Street Southwest (SW) and 2nd Street SW. Three parcels make up this site: 0.9 acres, 0.9 acres and 1.0 acres. The site has approximately 0.13 miles of shoreline and 0.04 miles of road frontage (Main Street SW).

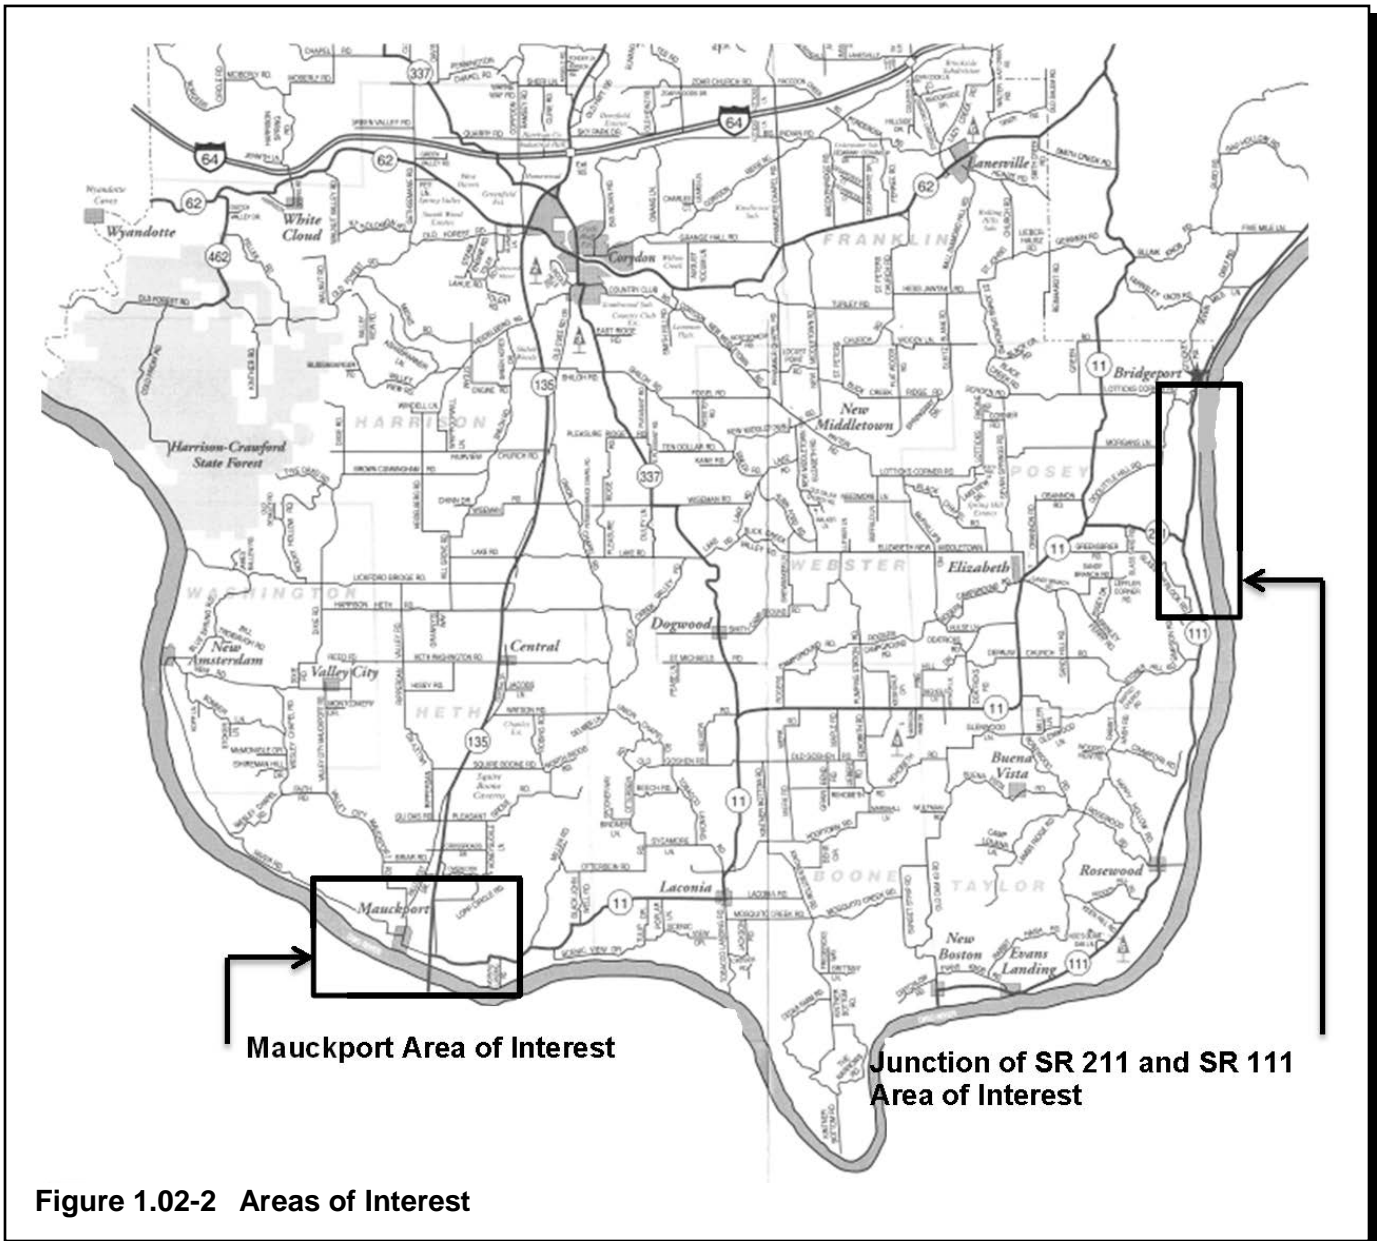

Figure 1.02-2 Areas of Interest

**SECTION 2  
EXISTING CONDITIONS**

---

## 2.01 EXISTING CONDITIONS

Harrison County has 45 miles of shoreline along the Ohio River with only one public boat ramp for citizens to use. With 4,198 registered fishing licenses in Harrison County in 2010, and an additional 9,305 boaters registered in the immediate area (Floyd, Washington, and Crawford counties), a public boat ramp would not only grant river access to Harrison County citizens but also encourage those from the surrounding counties to visit.

Harrison County has seen an increase in population over the last decade and is expecting this trend to continue. With this trend in population comes a need for Harrison County to provide adequate outdoor recreational facilities for its citizens. In the Harrison County Parks and Recreation Master Plan for 2009 to 2013, one of the objectives is to study the feasibility of creating a park/boat ramp along the Ohio River.

In a study conducted by the Harrison County Economic Development Corporation and the Chamber of Commerce of Harrison County, 947 registered Harrison County businesses were asked to complete a community development and economic growth survey. The results from this survey showed that of the businesses surveyed, 23 percent strongly agreed and 34 percent agreed with the following statement:

“Harrison County Boat Ramp: I would support the development of a public access boat ramp on the Ohio River in Harrison County.”

Horseshoe Southern Indiana Casino is located just north of one proposed project location. This casino river boat has brought a large influx of tourists to the county and consequently increased commerce to the surrounding area.

## 2.02 EXISTING ACCESS FACILITIES

There are several public boat ramps within 50 miles of the project location on the Indiana and Kentucky side of the Ohio River. To gain a better understanding of what amenities and design considerations should be taken into account, an existing site study was made. Seven site visits were conducted on November 23, 2011, based on this study. Appendix B contains a copy of the study results.

From this study, positive and negative aspects were discovered. A ramp of adequate width and length in a nonturbulent area and oriented downstream is preferred. Loading and fishing piers, shelterhouses, and playgrounds/waterparks add to the enjoyment and aesthetic appeal of the facility. Many of the ramp locations were not well-maintained and appeared to be in poor shape. This often detracted from the overall experience, though people still used the facility because of a lack of other options.

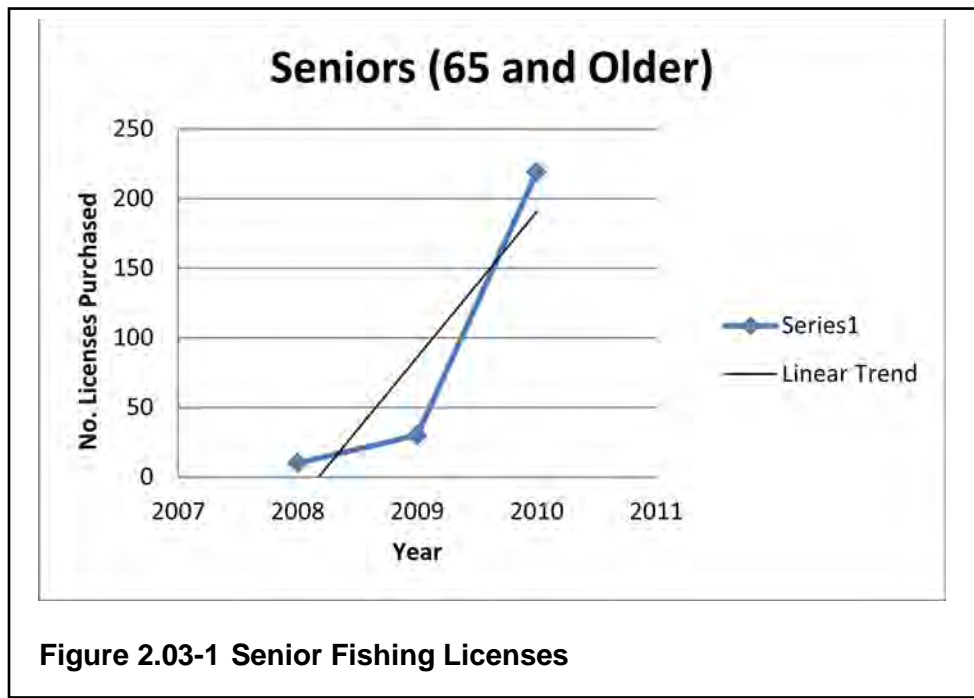

The current boat ramp in Mauckport appears to suffer from debris buildup and lack of maintenance. There is not a sufficient parking lot, the existing boat ramp is narrow and too short, and no other amenities are available for boaters to use. Because of these inconveniences, this boat ramp is seldom used. More acreage would be required to develop it into a fully functioning boat ramp.

### 2.03 HISTORICAL DATA

The population of Harrison County was 39,364 in 2010, which is a 14.7 percent increase in population since 2000. The population shift from the Louisville Metropolitan area to Harrison County is the main reason for the population increase. Approximately 65 percent of Harrison County’s population reside in its four northernmost townships. Another factor is the opening of Horseshoe Southern Indiana Casino. With these population increases, parks along the river would help improve the overall quality of life for Harrison County residents and could lead to an increase in tourism dollars for the southern one-half of Harrison County.

In 2011, 4,305 watercraft were registered in Harrison County and its surrounding three counties (Crawford, Washington, and Floyd). Floyd County had the most registrations with 1,801 watercraft. Harrison County was second with 1,281 watercraft registered. Washington and Crawford counties were third and fourth with 758 and 465 watercrafts, respectively. These numbers show the demand Harrison County has for a boat ramp in respect to its neighboring counties.

Fishing licenses sold in Harrison County declined in the past five years, according to historical license sales from 2006 though 2010. License sales to seniors (65 and older) and to Disabled Veterans (DAV) rose (see Figures 2.03-1 and 2.03-2). In 2010, seniors were able to buy a “Fish-For-Life” pass, meaning there will be a great decline of seniors purchasing licenses, but this will not likely change the amount of people who will utilize the boat ramp. License sales to youth (17 and under) and to adults (ages 18-64) declined (see Figures 2.03-3 and 2.03-4). However, starting in 2010, youth are not required to have a fishing license when fishing in Indiana public waters.

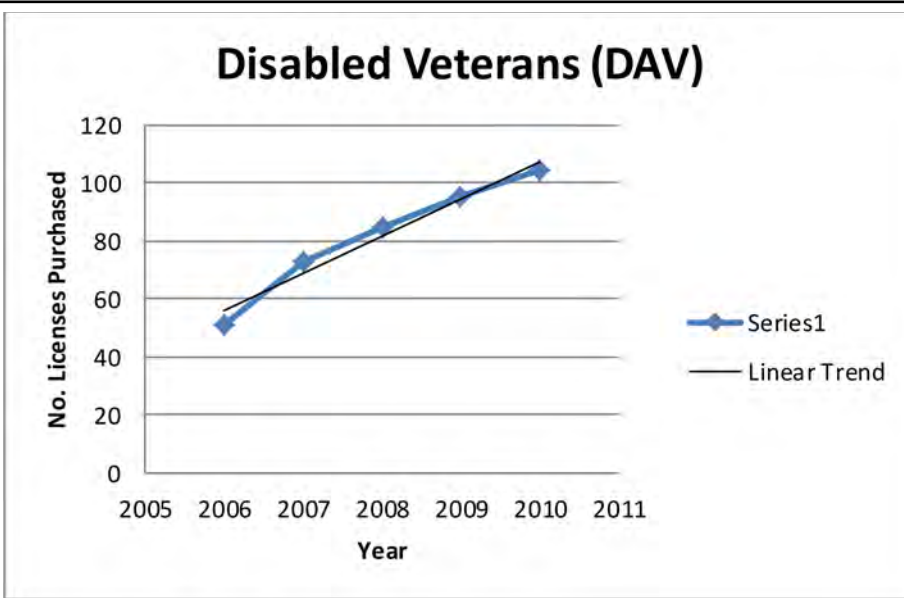

Figure 2.03-2 DAV Fishing Licenses

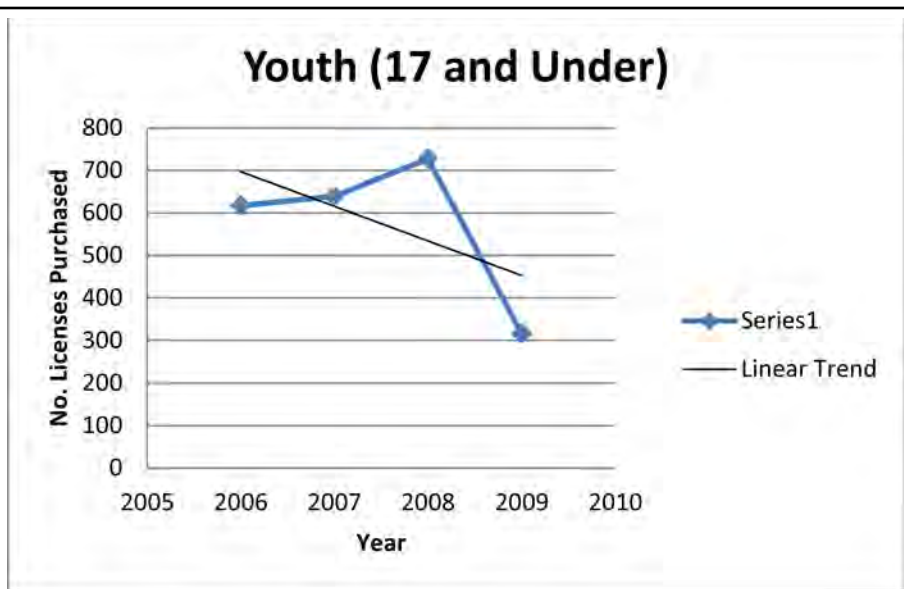

Figure 2.03-3 Youth Fishing Licenses

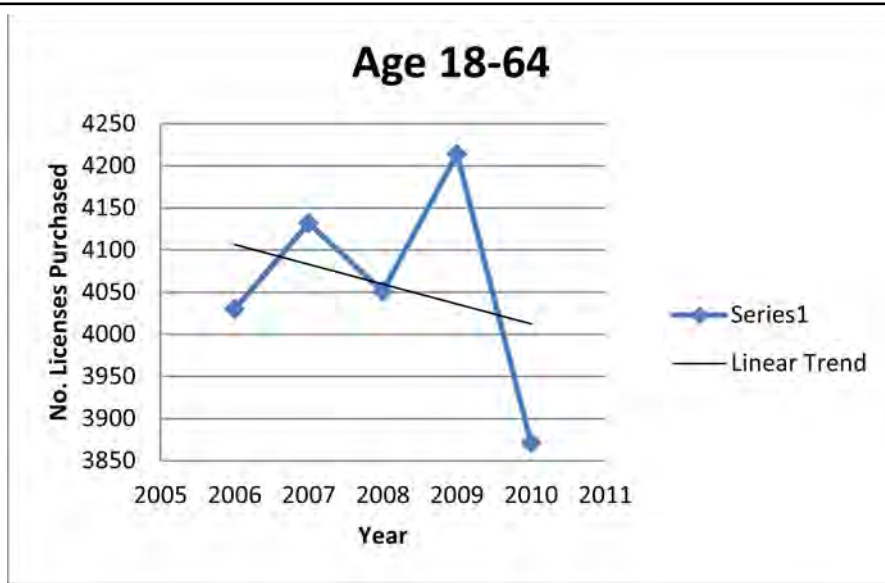

Figure 2.03-4 Adult Fishing Licenses

**SECTION 3**  
**EVALUATION OF ELEMENTS**

---

### 3.01 EVALUATION OF ELEMENTS

Two areas of interest were evaluated to find potential public boat ramp sites. Within these areas, 29 sites were chosen based primarily on land area. It is desired that there be room for a parking area along with other amenities. See Appendix C for the initial sites.

Harrison County would like to develop beyond more than a boat ramp in the northern project area. Other amenities considered include a fishing area, shelterhouse, playground, restroom facilities, walking path, sports fields, an amphitheater, concessions area, and camping area. A camping area is especially significant as it could generate potential revenue. Campgrounds require more acreage and, therefore, a site with more than 40 acres is preferred. A campground in this area is especially nice because it is close to the Horseshoe Southern Indiana Casino and could possibly attract tourists traveling to and from the Casino to utilize the park and its facilities. A larger park would potentially attract more than boaters to the park and would provide a spot for community activities and events.

Harrison County is looking for a smaller development in the southern project area. Possible amenities would include a boat ramp, parking area, shelterhouse, and playground. This would provide citizens in this area a place to bring smaller children and to those traveling farther it would provide a boat ramp closer than those in Kentucky. Harrison County would also like to explore the option of a campground around the Mauckport area. The campground could help stimulate the local economy of Mauckport and encourage economic development in the area.

Accessibility requirements will need to be included for both the landside and waterside facilities in the design. Refer to the Americans with Disabilities Act (ADA)–Architectural Barriers Act (ABA) for the current design requirements.

As with all parks, there is the potential for vandalism. This issue could improve by building in a place that sees more traffic, adding lighting, and using vandal-resistant materials.

### 3.02 PROPERTY OWNER INPUT

Harrison County sent letters to property owners adjacent to the Ohio River. This letter invited property owners to provide feedback and indicate whether they wanted their property considered in the boat ramp site study. See Appendix D for a copy of the letter.

Harrison County received numerous responses, and the information was used to help narrow down the sites. Appendix D contains a summary of the responses. Citizens who responded that did not want their property considered were removed. Citizens that agreed to have their property considered were noted.

### 3.03 PROPOSED FACILITIES

The *SOBA Design Handbook for Recreational Boating and Fishing Facilities* was used to help understand the types of proposed facilities and their design constraints. *The Recreation Facility Design Guidelines*, published by the United States Department of the Interior, Bureau of Reclamation was also used to define recreational facilities.

#### A. Boat Ramp

A boat ramp is the main proposed facility for the two developments. One lane is generally enough to accommodate 50 launchings and 50 retrievals a day. Using SOBA as the main design manual, many design choices exist.

#### B. Loading Pier

Loading Piers can help expedite the loading and retrieval process. They provide a convenient place for users to load and unload their boats without blocking others from using the ramp. These add an aesthetic appeal to the location and are valued by users.

#### C. Make-Ready/Tie-Down/Wash-Down Area

A make-ready/tie-down area is meant to help expedite the boat launching process while being convenient for the user. Boaters have an area where they can prepare their craft for launch or tie it down for travel from the site. A wash-down area allows the boater to rinse the boat to help prevent transportation of invasive species from one waterway to the next. These facilities are generally recommended for sites that have parking for 25 vehicles or more and are generally appreciated by users.

#### D. Parking

Parking for the boat ramp should be situated as close to the ramp area as possible to make it easy and convenient for boaters using the facility. For facilities that see a high turnover with boaters parking for only part of a day, 20 to 30 parking spaces per launching lane are usually adequate. For facilities that see a lower turnover, 30 to 50 parking spaces per launching lane should be adequate. Pull-through spaces are more convenient for vehicles with trailers and, are therefore, preferred. The *SOBA Design Handbook for Recreational Boating and Fishing Facilities* provides design information on size and spacing of parking spots.

#### E. Restrooms

As a general rule, one toilet fixture for every 30 parking spaces should be provided. This number can differ based on state and local health regulations. There are several types of toilets. The county currently prefers vaulted toilets. The toilets should be located close to the ramp and parking area for ease of use and efficiency. Restrooms are often the target of vandals and, therefore, should be built using vandal-resistant material.

F. Lighting

Lighting discourages vandals and adds to the overall safety of the site. Users will appreciate these fixtures if they are using the facilities after dark. Lights have a continuing operating cost, and a photo eye would be needed to turn them on and off.

G. Shelterhouse/Picnic Table

Shelterhouses provide boaters and visitors with a place to eat, rest, and enjoy the environment. They add to the appeal and convenience of a location.

H. Camping

Campsites are a potential revenue source and allow visitors to stay longer. Campgrounds usually have two types of sites: (1) primitive (tent camping) and (2) modern (RV/motorhome camping). Primitive campsites are smaller and usually have a tent pad and living area, while the modern campsites do not necessarily need the tent pad and often include water and electricity hook-ups. The living area usually consists of a picnic table and firepit. Angled/pull-through parking for modern campsites is desired for ease of use. A combination of one-half primitive camping sites and one-half modern campsites would provide variety to users and is, therefore, preferred.

One cost-reducing approach is to designate one campsite for a “host camper.” The host camper would not pay a campsite fee in exchange for providing information and assistance to other campers and completing small cleaning tasks, therefore, eliminating the cost for full-time staff.

Restrooms located throughout the grounds are necessary, and an entrance station is generally favored. A centrally located dump station would be a necessary addition for RV/motorhome campers and would stop campers from dumping their waste in random areas and creating unpleasant places.

I. Playground/Spray Park

Playgrounds/spray parks provide a place for younger children to play while parents/guardians relax. A spray park is especially valuable in the summer when the weather is hot. This could also provide a boater with children on board a place to rest.

J. Sports Fields

Sports fields encourage healthy and active lifestyles and provide a place for communities to hold sporting events. This addition can be added after the construction with the help of the community. Soccer, football, basketball, tennis, softball, and sand volleyball are examples of common sports played.

K. Amphitheater

An amphitheater provides a place for community events and concerts to take place. These events often encourage community involvement. Green design elements such as grass seating are encouraged to limit Operation and Maintenance costs.

L. Trail

A trail, especially through a wooded area, encourages people with dogs and children to visit. This addition can be added after construction with the help of the community. There is the possibility of constructing a nature trail with informational signs.

M. Concessions

Incorporating concessions in the development could potentially stimulate the local economy. There is the potential for mobile vendors and possibly a privately funded restaurant. Having food available for those using the facilities can make their experience more convenient and more enjoyable.

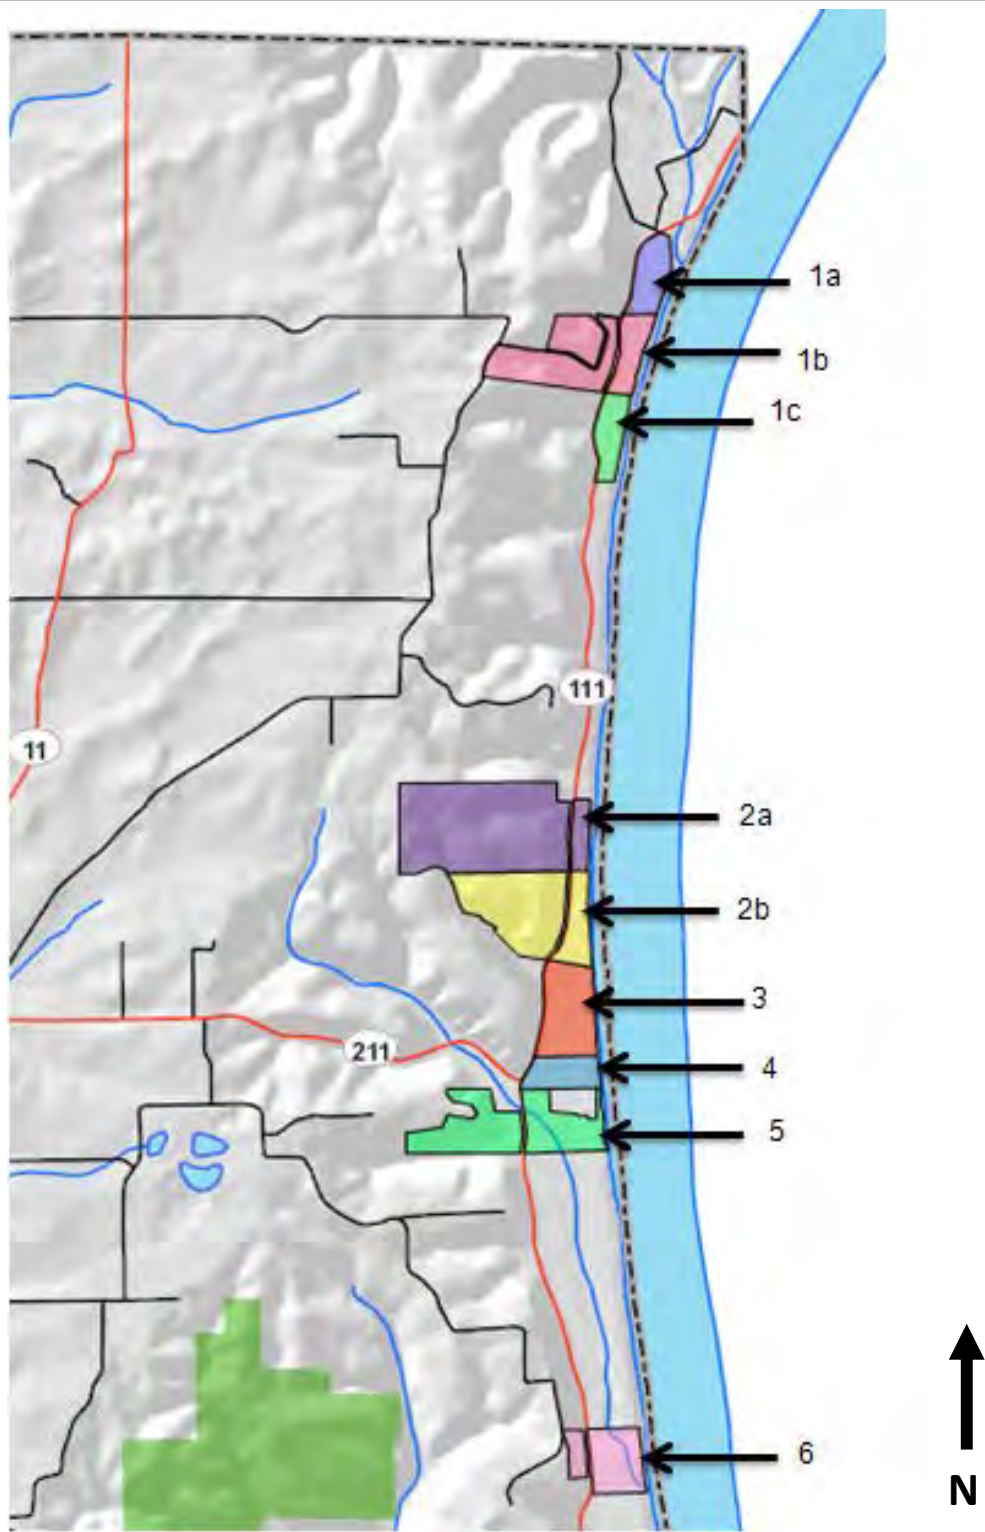

### 3.04 SITES AT THE JUNCTION OF SR 211 and SR 111

This interest area was chosen because of its proximity to major roadways. Elizabeth, Indiana, a town of 146 people, is about a four-mile drive. Horseshoe Southern Indiana Casino is located along SR 211 at the northern end of the project area. The casino is a main attraction in Harrison County, and visitors pass through the project area on their way to the casino. Also, the area is located at the end of a curve on the cutting side of the Ohio River. According to SOBA, in terms of current, this is the best location for a potential site.

Within the area of interest, every property that was over the necessary 20 acres was reviewed. Twelve sites were chosen to further investigate. See Figure 3.04-1 for a map of the sites.

Information was gathered to help gain a full understanding of the potential sites. Using geographical information system (GIS) maps and environmental resources, a study was done for each site focusing on things that would cause a site to have construction issues and maintenance problems. Wetland locations, floodplains, historic sites, river features, and mussel bed locations are examples of items investigated. See Appendix C for a summary of the results gathered.

Using the responses from the letters, land area, environmental impacts, and location of each site, the results were narrowed down.

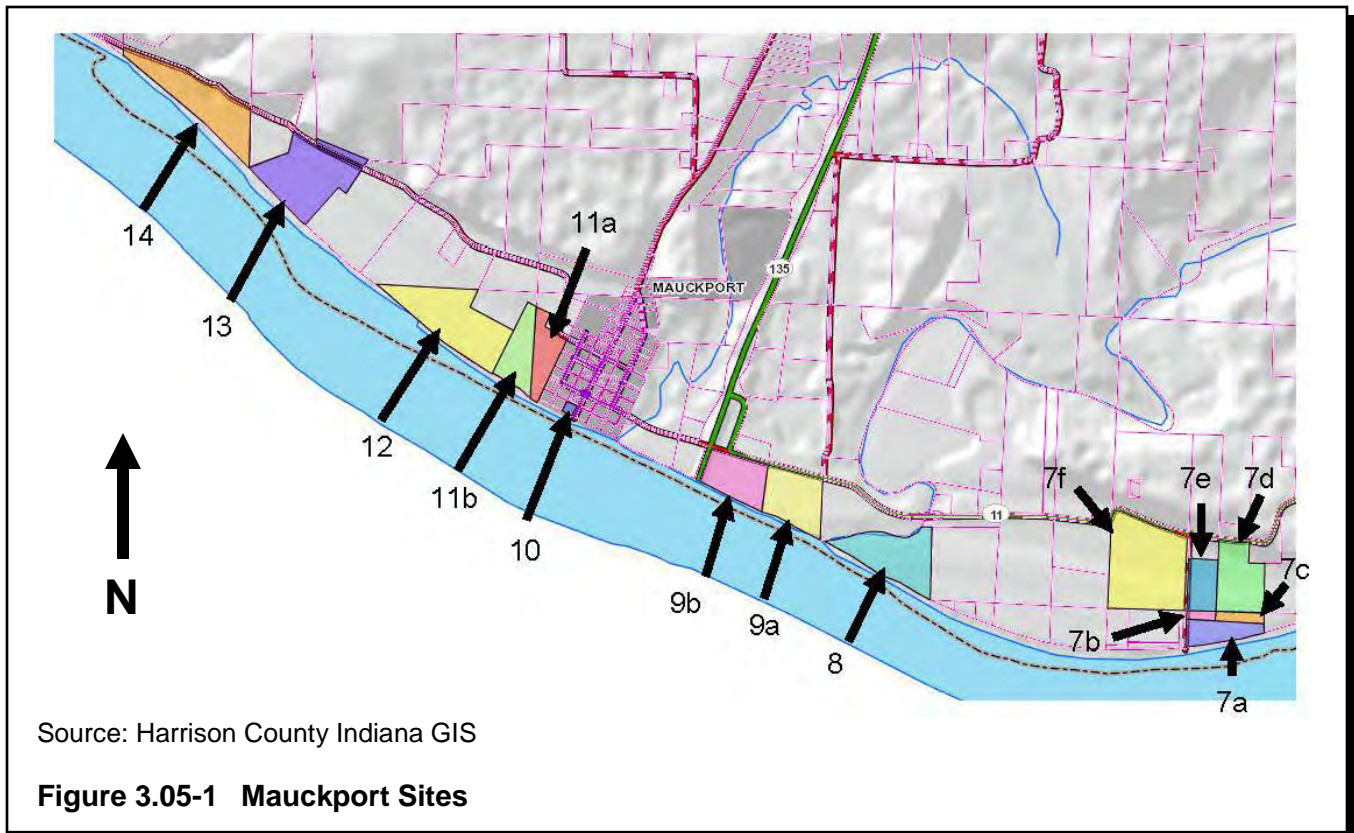

Harrison County Indiana GIS

**Figure 3.04-1 Junction SR 211 and SR 111 Sites**

### 3.05 SITES AT MAUCKPORT

This interest area was chosen because of the population in Mauckport and the bridge along SR 135 traveling to Kentucky. Mauckport, a town of 83, could see economic benefits from increased traffic if a boat ramp were located in the vicinity. The area is located along a relatively straight portion of the Ohio River.

Within the area of interest, properties that were 40.0 acres and under were investigated. Nine sites were chosen to investigate further. See Figure 3.05-1 for a map of the sites.

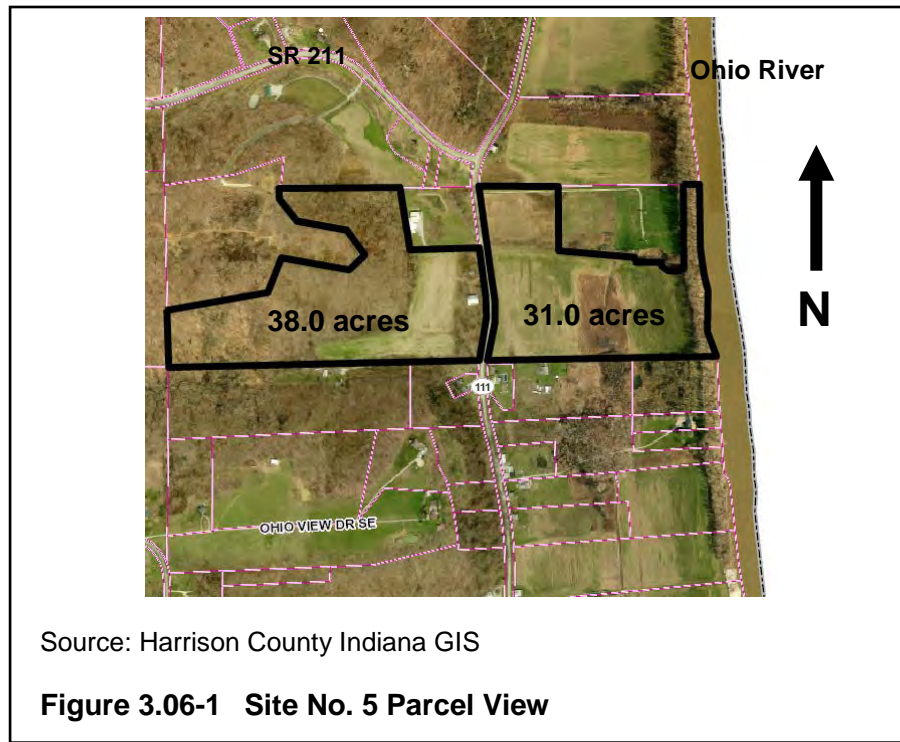

Information was gathered about the sites to help gain a full understanding of the potential sites. Using GIS maps and environmental resources a study was done for each site focusing on things that could cause a site to have numerous construction issues and maintenance problems. Wetland locations, floodplains, historic sites, river features, and mussel bed locations are examples of items investigated. See Appendix C for a summary of the results gathered.

Using the responses from the letters, land area, environmental impacts, and location of each site, the results were narrowed down.

### 3.06 SITE RECOMMENDATIONS

The recommended site for the Junction of SR 211 and SR 111 project area is Site No. 5. Site No. 5 is located immediately south of the intersection of SR 211 and SR 111. The parcel is split by SR 111 leaving 31.0 acres directly along the river and 38.0 acres on the other side of SR 111. The acreage is classified as 85.6 percent woodland and 14.4 percent is tillable land. The site has approximately 0.22 miles of shoreline and 0.22 miles of road frontage (SR 111). Therefore, the site contains ample footage of both road access and river access. See Figure 3.06-1 for a view of the parcel.

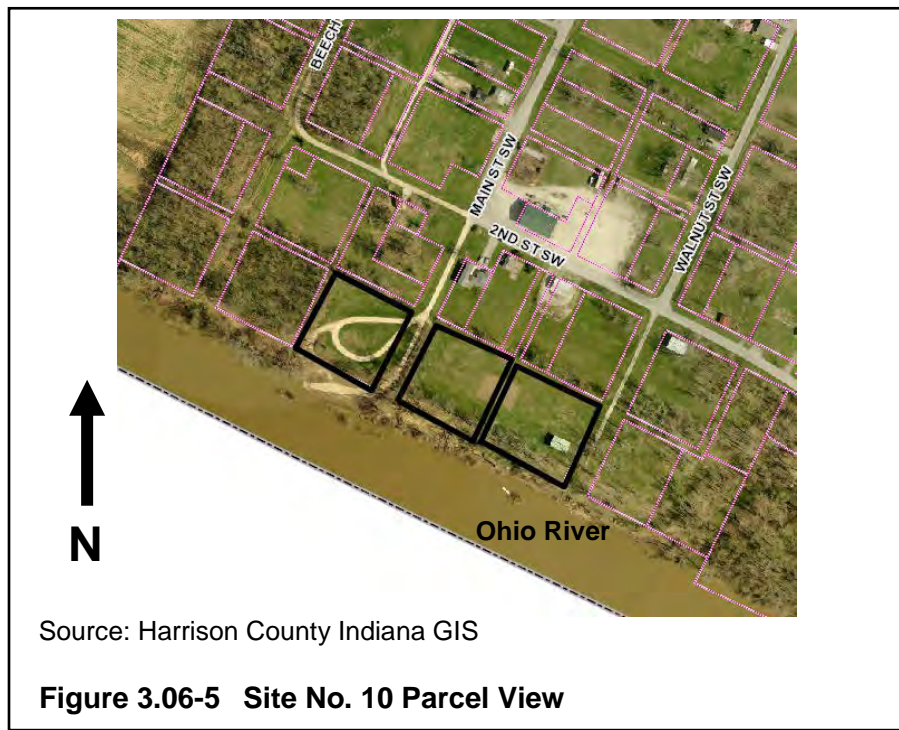

The owners, Burl, Doris, and Sandy Hoke, will consider selling their property. Electricity is currently the only public utility servicing this property. There are four buildings, one but possibly two that Harrison County would like to consider restoring. There are no known wetlands through this site or other environmental impacts. Site No. 4, located immediately north of Site No. 5, would be available for future planned improvements, if necessary.

The 38.0 acres of property on the other side of SR 111 would be a good area to add a campground and possible concessions area. It would separate the activity of the boat ramp and the campground. The back one-half of the parcel rises rapidly and would not be practical for camping. However, about a one-mile-long trail could potentially be added and would provide recreation for campground users. The 31.0 acres next to the river would provide room for a boat ramp, parking area, shelter-house, playground, and any other planned facility.

A potential site design was designed to establish possible main facility locations. It features pull-through parking spots, a make-ready/tie-down area, wide boat ramp, two sports fields with additional parking, a camping area, restrooms, playground area, and room for concessions. There

is room for a walking trail behind the campground, though the path of the trail will depend on terrain and slope. See Figure 3.06-2 for a drawing of the potential site design. See Figures 3.06-3 and 3.06-4 for a closer look at the Boat Ramp portion and Campground portion of Site No. 5.

The recommended sites for the Mauckport project area are Site Nos. 10 and 11. Site No. 10 is located immediately in Mauckport and includes the existing public boat ramp. The site would potentially be comprised of three parcels: 0.9, 0.9, and 1.0 acres, creating a site of 2.8 acres; 53.6 percent of the acreage is classified as woodland, while the remaining 46.4 percent is tillable land. See Figure 3.06-5 for a view of the parcel. The site has approximately 0.13 miles of shoreline and 0.04 miles of road frontage (Main Street SW), providing sufficient river access; however, the road access is limited.

Stanley Kingsley is the owner of the southern two parcels. Mr. Kingsley expressed his support for the boat ramp. The southernmost property has water and electric public utility service and one structure. There are no known wetlands through this site or other environmental impacts.

The Town of Mauckport is the owner of the northernmost parcel. No public utilities are currently available for the property. There are no known wetlands through this site or other negative environmental impacts.

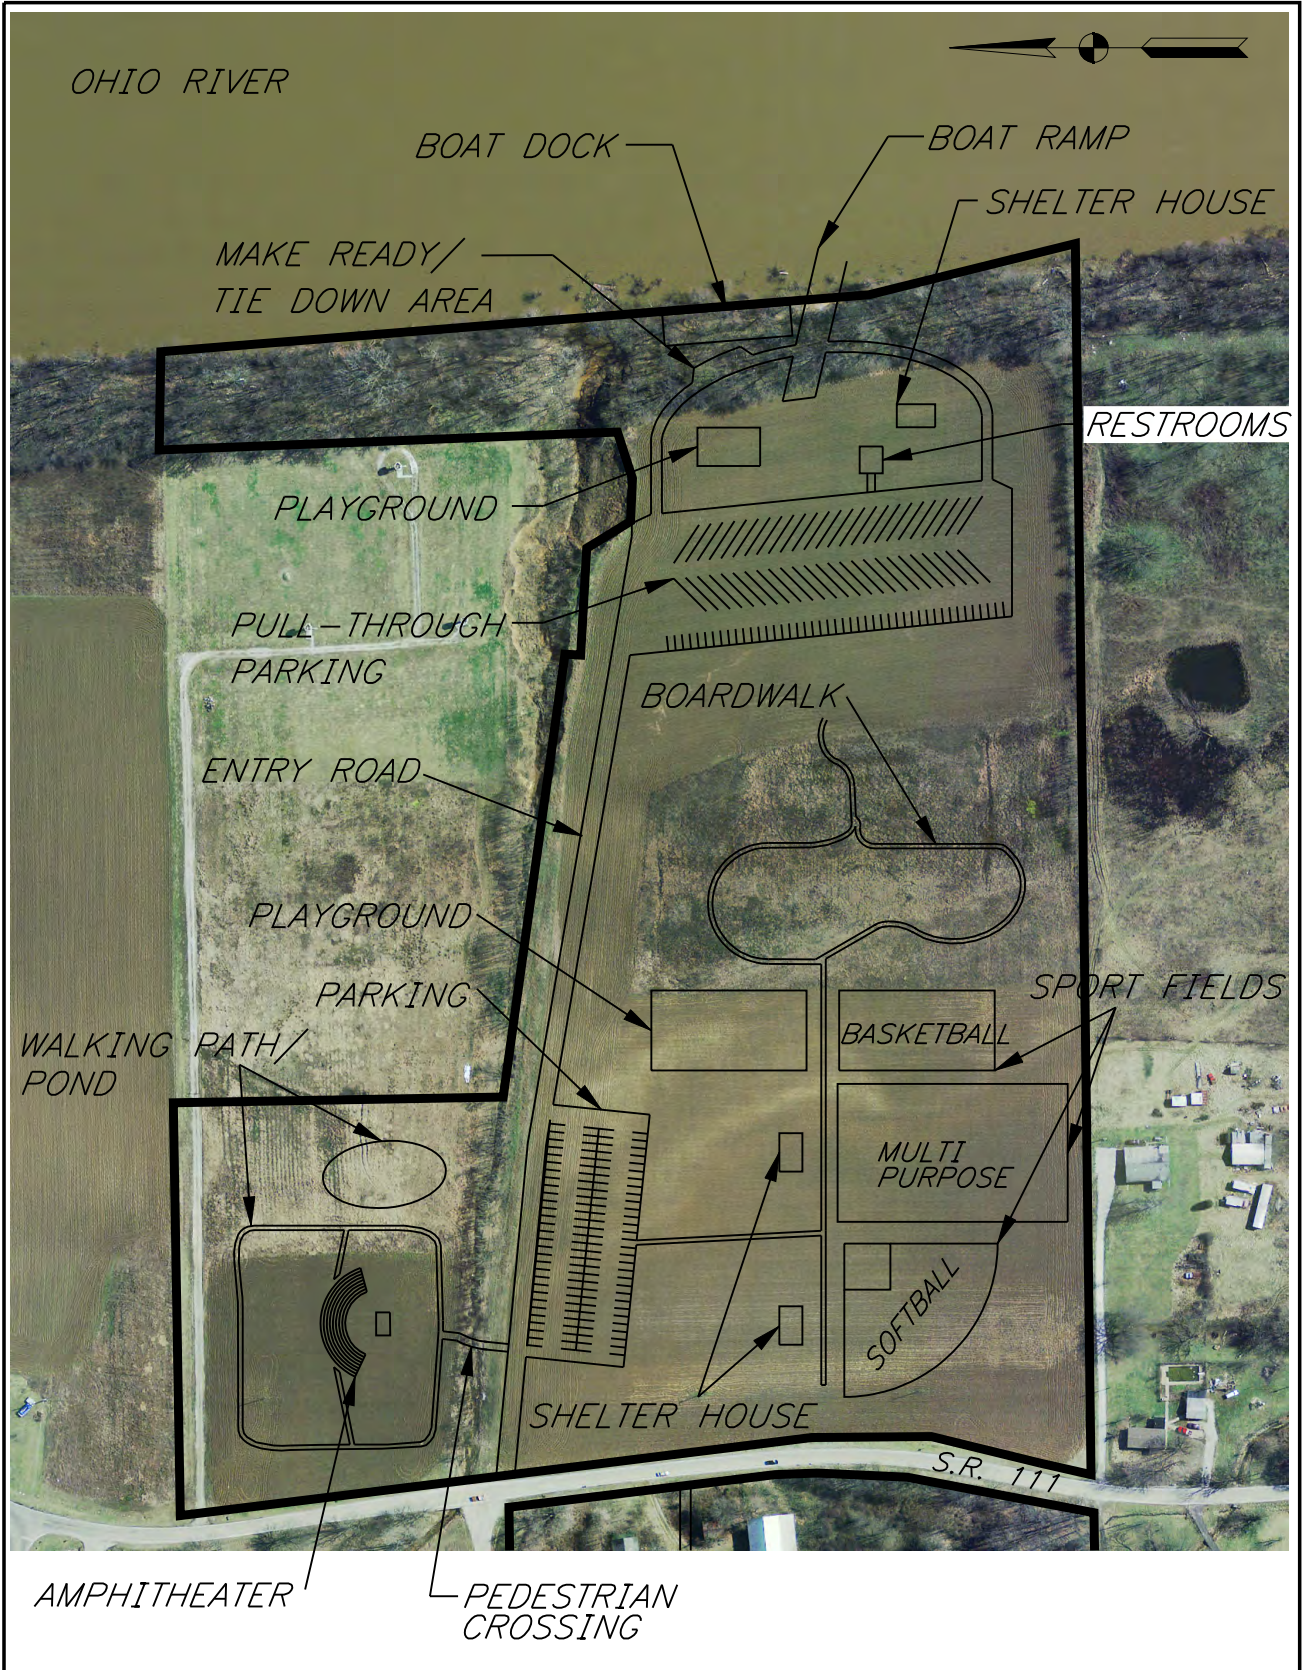

The area from this site would allow room for a boat ramp, parking lot, and possibly a few smaller developments. A potential site design was drawn to establish possible facility locations. It features pull-through parking spots, a wide boat ramp, additional parking, and restrooms. There is room for an addition such as a playground. See Figure 3.06-6 for a drawing of the potential site design.

 POTENTIAL SITE NO. 10 DESIGN  
 BOAT RAMP SITE STUDY  
 HARRISON COUNTY, INDIANA**

**FIGURE 3.06-6  
 4055.005**

Site Nos. 11 a/b are located immediately west of Mauckport. The site is comprised of two parcels: 13.0 and 14.8 acres, creating a site of 27.8 acres. The acreage is classified as 16.1 percent woodland, while the remaining 83.9 percent is tillable land. See Figure 3.06-7 for a view of the parcel. The site has approximately 0.18 miles of shoreline and 0.04 miles of road frontage (4th Street), providing sufficient river access; however, the road access is limited.

The owner, Joanne Timberlake, expressed interest in selling her property, which is recommended as a campground site. The site could feature campsites, a playground, a sports field, check-in area, restroom facility, dump station, small parking lot, and an access road. See Figure 3.06-8 for a drawing of the potential site design.

### 3.07 SITES OF NOTICE

Site Nos. 9 a/b are located southeast of Mauckport just after the bridge. With the proximity to Mauckport, and abundant shoreline, this would be an option for an Agricultural Park and Marina Site. This development is something that Harrison County would like to explore as a way to bring economic expansion to the area. See Figure 3.07-1 for a parcel view of Site Nos. 9 a/b.

**SITE 11**  
**POTENTIAL SITE NO. 11 DESIGN**  
**BOAT RAMP SITE STUDY**  
**HARRISON COUNTY, INDIANA**

**FIGURE 3.06-8**  
**4055.005**

Site No. 9 is comprised of two parcels, 19.0 and 22.0 acres, creating a site of 41.0 acres. The acreage is classified as 7.2 percent woodland, 92.5 percent tillable land, and 0.3 percent as farm pond. The site has approximately 0.46 miles of shoreline and 0.39 miles of road frontage (Old Hwy 11). There are currently no structures on the properties and no public utilities serve the parcels.

### 3.08 PUBLIC INFORMATION MEETING

A public information meeting was held on June 20, 2012, at 7 P.M. at the Harrison County Government Center. Harrison County residents, county officials and consultants from Strand Associates, Inc.® discussed the project and the findings as defined in the Boat Ramp Site Study Report. An informal question and answer session followed. The meeting was well attended and the presentation was met with positive reception and feedback. Appendix D includes the meeting agenda, the meeting register, a news article, and comments received from attendants.

**SECTION 4**  
**EVALUATION OF ENVIRONMENTAL IMPACTS**

---

#### **4.01 100-YEAR FLOODPLAINS**

The proposed boat ramp sites are located within the Ohio River's 100-year floodplain. In order to obtain the proper permits, a hydraulic model would need to be created to prove to Indiana Department of Natural Resources (IDNR) that the floodplains will not be affected by the proposed improvements. Appendix A includes copies of the appropriate Harrison County Flood Insurance Rate Map.

#### **4.02 WETLAND AND RIVER MANAGEMENT**

It is anticipated that there will be no negative impacts to wetlands during the construction of the proposed project. The appropriate permits from the Indiana Department of Environmental Management (IDEM), IDNR, and United States Army Corps of Engineers (USACE) would be needed for the proposed project.

The USACE has jurisdiction over any construction performed on the Ohio River. If the decision is made to construct a boat ramp along the river, a Section 404 permit must first be obtained from the USACE. The USACE will want to ensure that the proposed project will not have any negative impacts to the Ohio River.

Before construction can begin, a Construction in a Floodway permit will be needed from IDNR. As mentioned, the entire proposed project sites are located within the Ohio Rivers' 100-year floodplain. Therefore, a permit is needed to ensure that the proposed construction will not have any negative impacts on the floodplain. The permit's jurisdiction includes the river's watershed, the local fish and wildlife, and the historical significance of the area. The permit would have to be analyzed by the Divisions of Water, Fish and Wildlife, and Historic Preservation Departments of the IDNR.

A Section 401 Water Quality Certification permit would have to be obtained from IDEM as part of the Section 404 permit. The permit is required because the proposed project is located within the Ohio River watershed. The permit makes certain that the proposed project will not adversely affect the watershed or any water flowing into the river or water table.

A Rule 5 permit would be required from IDEM. This permit enforces erosion control. It ensures that land outside the project area will not be adversely affected by excessive runoff or excessive sediment deposits.

#### **4.03 HISTORICAL, ARCHITECTURAL, AND ARCHAEOLOGICAL SITES**

According to the Harrison County Interim Report, there are five known historical or architectural sites located in the vicinity of the project areas. Figures 4.03-1 and 4.03-2 illustrate these sites with respect to the proposed areas of interest on the appropriate historical map. Table 4.03-1 provides a description of each historical site. The significance of each inventory entry was evaluated in terms of its history, architecture, environment, and integrity, and then placed in one of three general categories: outstanding (O), notable (N), or contributing (C). This evaluation was taken from the Harrison County, *Indiana Historic Sites and Structures Inventory Interim Report of 1987*.

Region	No.	Rtg.	Description
Heth Township	017	C	<b>Cemetery</b> , River Road; 1837-1920
Heth Township	018	C	<b>House</b> , River Road; Carpenter-Builder, c. 1870
Posey Township	008	N	<b>McCarthy House</b> , SR 111; Italianate, c. 1875
Posey Township	009	O	<b>Riverside United Brethren Church</b> , SR 111; Greek Revival/Italianate, c. 1872
Posey Township	010	N	<b>Glazes School</b> , SR 111; Carpenter-Builder, c. 1880

**Table 4.03-1 Interim Report Listings**

There is always the potential for Native American artifacts on the site, which are often present along the river. A study must be conducted by an accredited archaeologist to ascertain the presence or nonpresence of such artifacts.

#### 4.04 ISSUES TO CONSIDER

The Indiana bat is known to roost in southern Indiana and, therefore, no trees suitable for Indiana bat roosting (greater than 3 inches in diameter at breast height, living or dead, with loose hanging bark) should be cut from April 1 through September 30. By minimizing the amount of trees that are to be cut down, this issue can be avoided.

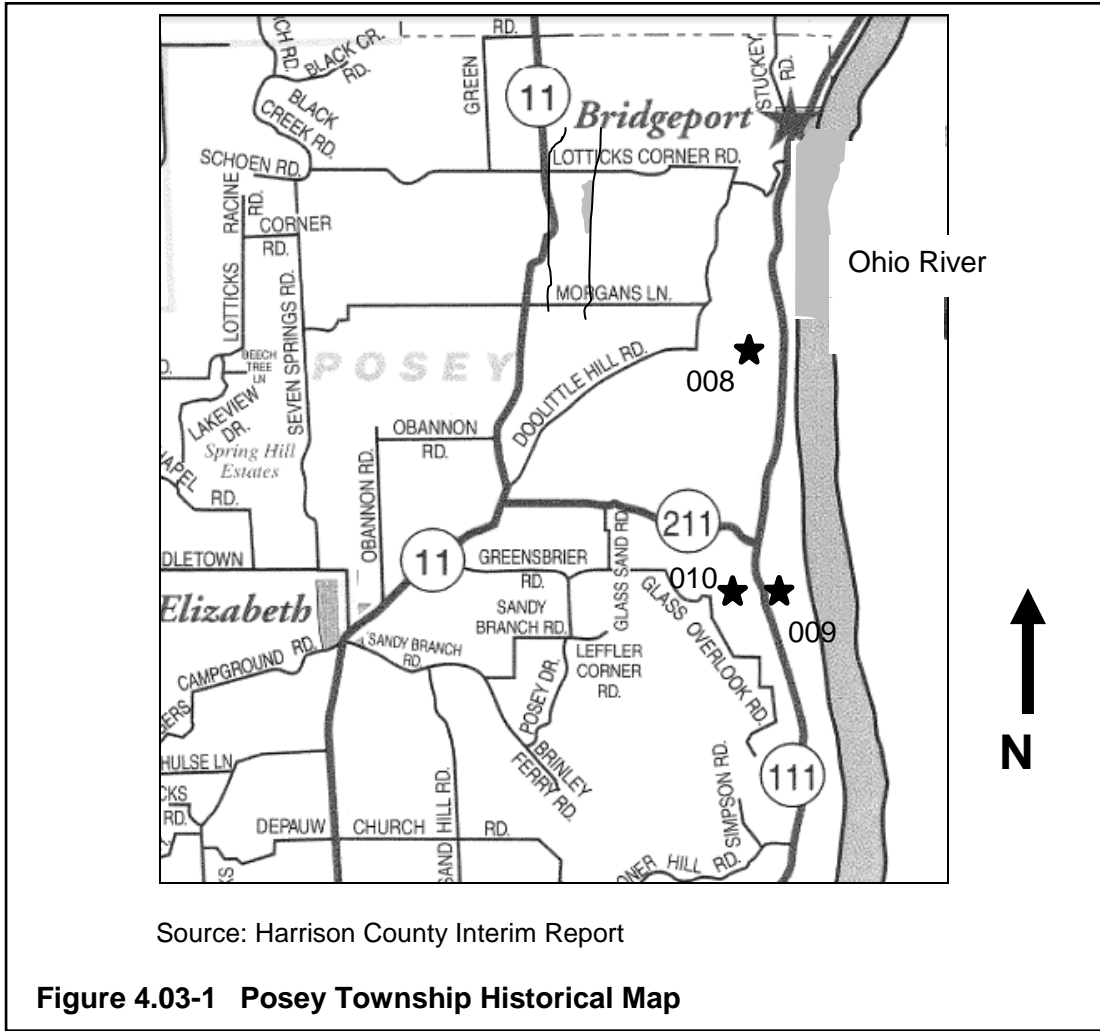

#### 4.05 COMMENTS FROM REGULATORY AGENCIES

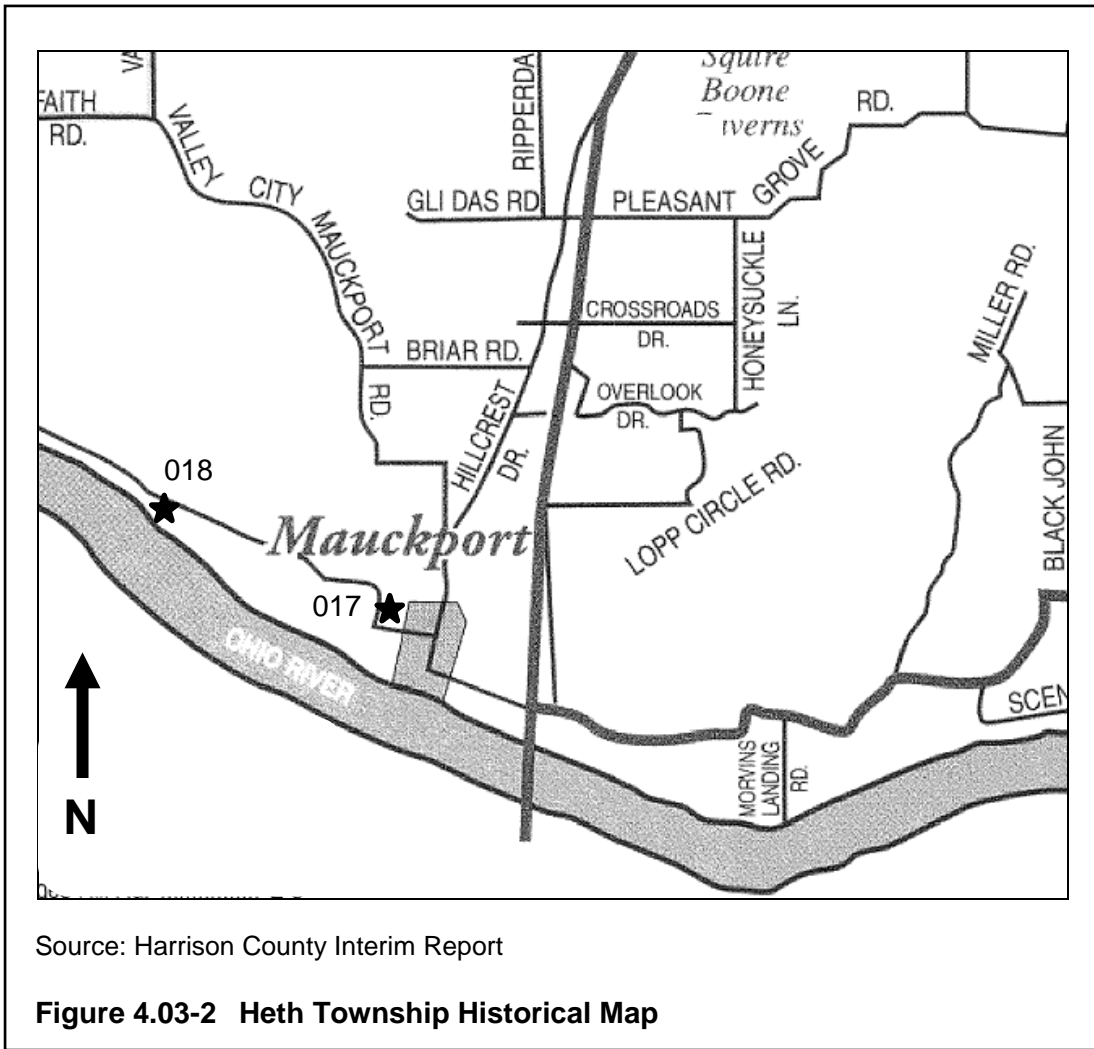

Early Coordination/Environmental Assessment through the IDNR has been completed for the recommended sites. Appendix C contains letters that were provided by IDNR and indicate the response to its evaluation of the environmental impacts associated with the proposed boat ramp.

According to the IDNR Early Coordination/Environmental Assessment, Site No. 5 has one animal species (Ohio Pigtoe) which is a special concern, three state endangered plant species (Illinois Blackberry, Downy Gentian, and Long-awn Hairgrass), and one state rare plant species (Golden Alexanders) documented within one-half mile of the site. The Division of Nature Preserves anticipates few impacts to these species resulting from the boat ramp. The United States Fish and Wildlife Service recommends avoiding impacts to the creek flowing through the site and minimizing impacts to the Ohio River’s forested riparian corridor.

Site No. 10 has two state endangered animal species (Peregrine Falcon and Allegheny Woodrat) and one state endangered plant species (Bottomland Broomrape) documented within one-half mile of the site. The Division of Nature Preserves recommends the proposed boat ramp be constructed on the previously disturbed site to reduce impacts. The United States Fish and Wildlife Service does not foresee any impacts to these species and recommends minimizing impacts to the Ohio River’s forested riparian corridor.

For both sites, a smooth surface along the banks could be provided by using open-celled concrete block mats instead of riprap for bank armoring, and revegetating the area with native herbaceous species.

**SECTION 5  
FUNDING**

---

## 5.01 FUNDING

One possible source of funding for this project is through the Land and Water Conservation Fund (LWCF). This program provides grants for 50 percent of the cost for the acquisition or development of outdoor recreation sites and facilities. The park board must have its matching share of the project available before project rating. This grant is available only to park and recreation boards established under Indiana Law with an approved current five-year master plan for parks and recreation. Harrison County has a current IDNR-approved master plan and is therefore eligible under that criteria.

The application must be postmarked not later than June 1 in order to be considered for the grant. The LWCF manual gives guidance for report completion. The rating criteria portion of the application is deemed the most important and should, therefore, be thorough and detailed.

The LWCF grant process usually takes one year to complete. Acquisition of land or construction of facilities cannot begin until federal approval is obtained.

The Harrison County Community Foundation is another possible source of funding. This organization is funded by contributions from Horseshoe Southern Indiana Casino and members of the community. These grants are available to not-for-profit agencies serving Harrison County. There is no limit on the amount of funding requested. However, grants over \$200,000 are considered “Signature Grants” and are processed differently than regular grants. These Signature Grant requests are only accepted between November 1 and December 15 for funding in the following calendar year.

The Sportfish Restoration Federal Grant Program contains money that is allocated each year for public access opportunities. According to the Public Access Coordinator of the Division of Fish and Wildlife, a boat ramp on the Ohio River would qualify for grants under this program.

The Harrison County Emergency Management Agency was also contacted regarding the project and possible funding. There is currently no available funding but the Harrison County Emergency Management Agency would support the addition of two boat ramps along Harrison County’s southern boarder.

**SECTION 6**  
**OPINION OF PROBABLE COST**

---

## 6.01 OPINION OF PROBABLE COST

Two sites are recommended for a public boat ramp. Site No. 5 is located immediately south of the Junction of SR 211 and SR 111. Site No. 10 is located immediately in the town of Mauckport. Site No. 11 is also recommended for a campground.

Site No. 5 features angled/pull-through parking spots, a make-ready/tie-down area, a wide boat ramp, two sports fields with additional parking, a camping area, restrooms, a shelter house, a playground area, and room for concessions. The parking area and roads were priced assuming 1-inch hot mixed asphalt (HMA) surface, 2-inch HMA intermediate, 10-inch compacted aggregate, and the necessary excavation. A summary of the costs for the Boat Ramp portion of site 5 is included in Table 6.01-1, a summary of the costs for the Campground portion of site 5 is included in Table 6.01-2.

Site No. 10 includes pull-through parking spots, a wide boat ramp, additional parking, a shelter house, a playground and restrooms. The parking area and roads were priced assuming 1-inch HMA surface, 2-inch HMA intermediate, 10-inch compacted aggregate, and the necessary excavation. A summary of the costs for this site is included in Table 6.01-3.

Site No. 11 will include a restroom, a small parking lot, an access road and camping sites. The parking area and roads were priced assuming 1-inch HMA surface, 2-inch HMA intermediate, 10-inch compacted aggregate, and the necessary excavation. A summary of the costs for this site is included in Table 6.01-4.

County representatives can review the probable costs, and have the ability to mix and match different facilities.

These facilities will see Operation and Maintenance (O&M) costs throughout their use. The boat ramp and other facilities will need to be maintained to ensure they remain useful to users. The restrooms and dumping stations will require pumping, and any trash receptacles need frequent pick-ups. A summary of the O&M costs for each site can be seen in Tables 6.01-5 to 6.01-7. Parking lots and roads will be included in the County Road System and will, therefore, be maintained by the County Highway Department.

<u>Cost Item</u>	<u>Units</u>	<u>Quantities</u>	<u>Unit Price</u>	<u>Total Price</u>
Boat Ramp	LS	1	\$50,000.00	\$ 50,000.00

# Example Boat Ramps:

## Mauckport Boat Dock (Mauckport, IN)

Access Type: Any Boat  
Type: Any Boat  
Water Body: Ohio River - Louisville  
Site Name: Mauckport Boat Dock  
Shoreline: Year-Round, All-Hours  
Boat Ramp: Year-Round, All-Hours  
Surface: Paved  
Water Body: Ohio River - Louisville  
Parking: Paved  
Capacity: 25 or Less, Approximately 2  
Acres  
Fee: Yes  
Picnic: Unknown  
Camping: Unknown  
Restroom: Unknown  
Marina: Unknown

## Riverview Park Ramp (Brandenburg, KY)

Access Type: Any Boat  
Type: Any Boat  
Water Body: Ohio River - Central  
Site Name: Riverview Park Ramp  
Shoreline: Year-Round, All-Hours  
Boat Ramp: Year-Round, All-Hours  
Surface: Paved  
Water Body: Ohio River - Central  
Parking: Paved  
Capacity: 26 to 50, Approximately 23 Acres  
Fee: No  
Picnic: Year-Round, Limited-Hours  
Camping: None  
Restroom: Year-Round, All-Hours  
Marina: Seasonal, Limited-Hours

## West Point Ramp-Salt River (West Point, KY)

Access Type: Any Boat  
Type: Any Boat  
Water Body: Ohio River - Louisville  
Site Name: West Point Ramp - Salt River  
Shoreline: Year-Round, All-Hours  
Boat Ramp: Year-Round, All-Hours  
Surface: Paved  
Water Body: Ohio River - Louisville  
Parking: Unpaved  
Capacity: 25 or Less, Approximately 10 Acres  
Fee: Yes  
Picnic: Unknown  
Camping: Unknown  
Restroom: Seasonal, All-Hours

## Greenwood Ramp (Greenwood, KY)

Access Type: Any Boat

Type: Any Boat

Water Body: Ohio River - Louisville

Site Name: Greenwood Ramp

Shoreline: Year-Round, All-Hours

Boat Ramp: Year-Round, All-Hours

Surface: Paved

Water Body: Ohio River - Louisville

Parking: Paved

Capacity: 26 to 50, Approximately 10 Acres

Fee: No

Picnic: Year-Round, All-Hours

Camping: Unknown

Restroom: Year-Round, All-Hours

Marina: None

## Middle Creek Boat Ramp (Floyd County, IN)

Access Type: Any Boat

Type: Any Boat

Water Body: Ohio River - Louisville

Site Name: Middle Creek Boat Ramp

Shoreline: Year-Round, All-Hours

Boat Ramp: Year-Round, All-Hours

Surface: Paved

Water Body: Ohio River - Louisville

Parking: Paved

Capacity: 26 to 50, Approximately 30 Acres

Fee: No

Picnic: Unknown

Camping: Unknown

Restroom: Unknown

Marina: Unknown

## Jaycees Boat Ramp (New Albany, IN)

Access Type: Any Boat  
Type: Any Boat  
Water Body: Ohio River - Louisville  
Site Name: Jaycees Boat Ramp  
Shoreline: Year-Round, All-Hours  
Boat Ramp: Year-Round, All-Hours  
Surface: Paved  
Water Body: Ohio River - Louisville  
Parking: Paved  
Capacity: 25 or Less, Approximately 10 Acres?  
Fee: No  
Picnic: Year-Round, All-Hours  
Camping: Unknown  
Restroom: Unknown  
Marina: Unknown

## George Rogers Clark Homesite (Clarksville, IN)

Access Type: Any Boat

Type: Any Boat

Water Body: Ohio River - Louisville

Site Name: George Rogers Clark Homesite

Shoreline: Year-Round, All-Hours

Boat Ramp: Year-Round, All-Hours

Surface: Paved

Water Body: Ohio River - Louisville

Parking: Paved

Capacity: 25 or Less, Approximately 3 Acres

Fee: No

Picnic: Year-Round, All-Hours

Camping: Unknown

Restroom: Unknown

Marina: Unknown

## Duffy's Landing (Jeffersonville, IN)

Access Type: Any Boat  
Type: Any Boat  
Water Body: Ohio River - Louisville  
Site Name: Duffy's Landing  
Shoreline: Year-Round, All-Hours  
Boat Ramp: Year-Round, All-Hours  
Surface: Paved  
Water Body: Ohio River - Louisville  
Parking: Paved  
Capacity: 51 plus, Approximately 10 Acres  
Fee: No  
Picnic: Year-Round, All-Hours  
Camping: Unknown  
Restroom: Year-Round, All-Hours  
Marina: Unknown

**Cox's Park (Riverwood, KY)**

Water Body: Ohio River - Louisville  
Site Name: Cox's Park  
Shoreline: Unknown  
Boat Ramp: Year-Round, All-Hours  
Surface: Paved  
Water Body: Ohio River - Louisville  
Parking: Paved  
Capacity: 26 to 50, Approximately 120 Acres  
Fee: No  
Picnic: Year-Round, All-Hours  
Camping: Unknown  
Restroom: Unknown  
Marina: Unknown

## Additional Examples:

### Westport (Westport, KY)

Water Body: Ohio River - Louisville  
Site Name: Westport  
Shoreline: Year-Round, All-Hours  
Boat Ramp: Year-Round, All-Hours  
Surface: Paved  
Water Body: Ohio River - Louisville  
Parking: Paved  
Capacity: 26 to 50, Approximately 5 Acres  
Fee: No  
Picnic: Year-Round, All-Hours  
Restroom: Year-Round, All-Hours

## Paul Ogle Riverfront Park (Vevay, IN)

Access Type: Any Boat  
Type: Any Boat  
Water Body: Ohio River - Below Cincinnati  
Site Name: Paul Ogle Riverfront Park  
Shoreline: Year-Round, Limited-Hours  
Boat Ramp: Year-Round, Limited-Hours  
Surface: Paved  
Water Body: Ohio River - Below Cincinnati  
Parking: Paved  
Capacity: 25 or Less, Approximately 20 Acres  
Fee: No  
Picnic: Year-Round, Limited-Hours  
Camping: Unknown  
Restroom: Year-Round, Limited-Hours  
Marina: Unknown

## Big Bone Creek (Boone County, KY)

Access Type: Any Boat

Type: Any Boat

Water Body: Ohio River - Below Cincinnati

Site Name: Big Bone Creek

Shoreline: Unknown

Boat Ramp: Seasonal, All-Hours

Surface: Paved

Water Body: Ohio River - Below Cincinnati

Parking: Paved

Capacity: 51 plus, Approximately 20 Acres

Fee: Yes

Picnic: Unknown

Camping: Seasonal, All-Hours

Restroom: Seasonal, All-Hours

Marina: Seasonal, All-Hours

Date: 11-23-11 Attendees: \_\_\_\_\_

THIS IS NOT A PERMIT

RQAW CORPORATION

State of Indiana  
DEPARTMENT OF NATURAL RESOURCES  
Division of Fish and Wildlife

DEC 30 2010

Early Coordination/Environmental Assessment

---

**DNR #:** ER-15113 **Request Received:** June 17, 2010

**Requestor:** RQAW Corporation  
Kelley M Aronson  
10401 North Meridian Street  
Suite 401  
Indianapolis, IN 46290-1158

**Project:** Development of recreational areas along the Ohio River consisting of a boat ramp, restrooms, picnic area, and playground (4 sites); onsite meeting request

**County/Site info:** Harrison  
  
The Indiana Department of Natural Resources has reviewed the above referenced project per your request. Our agency offers the following comments for your information and in accordance with the National Environmental Policy Act of 1969.

**Regulatory Assessment:** This proposal will require the formal approval for construction in a floodway under the Flood Control Act, IC 14-28-1. Please submit a copy of this letter with the permit application.

**Natural Heritage Database:** The Natural Heritage Program's data have been checked. To date, no plant or animal species listed as state or federally threatened, endangered, or rare have been reported to occur in the project vicinity.

**Fish & Wildlife Comments:** We were not able to adequately assess the potential impacts to fish, wildlife and botanical resources resulting from the project with the information provided. However, we offer the following preliminary recommendations based on the information that was provided:

We recommend that the Rosewood site be discarded as a potential boat ramp site due to a known mussel bed that exists near the Indiana side of the Ohio River at that location. Also at the Rosewood site, part of the forested riparian corridor along the Ohio River is listed as forested wetland by the National Wetland Inventory (NWI) maps.

The Morvins Landing and SR 211 sites do not appear to contain wetlands according to the NWI maps; however, only a wetlands determination can positively rule out the presence of wetlands. These sites, as with the other sites, include non-wetland forested riparian corridors along the river which will be impacted by the construction of a boat ramp and related facilities. There appears to be no documented mussel resources close to the sites.

The Mauckport site is at the confluence of Buck Creek and the Ohio River. Part of the forested riparian corridor at the confluence of these two waterways is listed as forested wetland by the NWI maps. The Haunted Hollow mussel bed is located close to the mouth of Haunted Hollow Creek approximately 3.5 river miles downstream from the Mauckport boat ramp site. With the implementation and maintenance of sound erosion and sediment control practices until all bare and disturbed areas are fully revegetated, construction of the proposed project at this location should not result in significant impacts to the Haunted Hollow mussel bed.

Due to the presence or potential presence of wetlands at these sites, we recommend contacting and coordinating with the Indiana Department of Environmental Management (IDEM) 401 program and also the US Army Corps of Engineers (USACE) 404 program. A wetland determination/delineation is recommended to determine the wetland status of potential boat ramp sites.

**THIS IS NOT A PERMIT**

**State of Indiana  
DEPARTMENT OF NATURAL RESOURCES  
Division of Fish and Wildlife**

**Early Coordination/Environmental Assessment**

Impacts to non-wetland forest under 1 acre should be mitigated at a 1:1 ratio, while impacts to non-wetland forest over 1 acre should be mitigated at a minimum 2:1 ratio. Impacts to wetlands should be mitigated at the appropriate ratio. For more information, see <http://www.in.gov/legislative/register/20061213-IR-312060562NRA.xml.pdf>.

Fish, wildlife, and botanical resource losses as a result of this project can be minimized through implementation of the following measures and will be a requirement of a permit. Revegetate all bare and disturbed areas with a mixture of grasses (excluding all varieties of tall fescue), legumes, and native shrub and hardwood tree species as soon as possible upon completion.

Minimize and contain within the project limits inchannel disturbance and the clearing of trees and brush.

Do not work in the waterway from April 1 through June 30 without the prior written approval of the Division of Fish and Wildlife.

Do not cut any trees suitable for Indiana bat roosting (greater than 3 inches dbh, living or dead, with loose hanging bark) from April 1 through September 30.

Use minimum average 6 inch graded riprap stone extended below the normal water level to provide habitat for aquatic organisms in the voids.

Plant native hardwood trees along the top of the bank and right-of-way to replace the vegetation destroyed during construction.

Post "Do Not Mow or Spray" signs along the right-of-way.

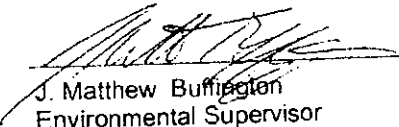

Appropriately designed measures for controlling erosion and sediment must be implemented to prevent sediment from entering the stream or leaving the construction site; maintain these measures until construction is complete and all disturbed areas are stabilized.

Seed and protect all disturbed slopes that are 3:1 or steeper with erosion control blankets (follow manufacturer's recommendations for selection and installation; seed and apply mulch on all other disturbed areas.

---

**DNR #:** ER-15113-1 **Request Received:** January 13, 2012

**Requestor:** Strand Associates Inc  
Anthony J Akles, PE  
629 Washington Street  
Columbus, IN 47201-6231

**Project:** Preparation of a boat ramp study for the construction of boat ramps on the Ohio River at Site 5 (junction of SR 211 and SR 111) and Site 10 (next to Mauckport boat dock)

**County/Site info:** Harrison

**Regulatory Assessment:** The Indiana Department of Natural Resources has reviewed the above referenced project per your request. Our agency offers the following comments for your information and in accordance with the National Environmental Policy Act of 1969. This proposal will require the formal approval for construction in a floodway under the Flood Control Act, IC 14-28-1. Please submit a copy of this letter with the permit application.

**Natural Heritage Database:** The Natural Heritage Program's data have been checked. The following plant and animal species have been documented within 1/2 mile of the two project sites, as indicated:

Site 5:

- 1) ANIMAL  
Ohio Pigtoe (*Pleurobema cordatum*) - special concern
- 2) PLANTS
  - a) Illinois Blackberry (*Rubus centralis*) - state endangered
  - b) Downy Gentian (*Gentiana puberulenta*) - state threatened
  - c) Long-awn Hairgrass (*Muhlenbergia capillaries*) - state endangered
  - d) Golden Alexanders (*Zizia aptera*) - state rare

All of the listed plants above, except the Illinois Blackberry, are plants that are found on dry hillsides in a limestone glade community. There would not likely be any impacts to these plants resulting from the boat ramp site. Since the Illinois Blackberry is a historical presence, the Division of Nature Preserves anticipates no impacts to this species, as well as the other plant species.

Site 10:

- 1) ANIMALS
  - a) Peregrine Falcon (*Falco peregrines*) - state endangered
  - b) Allegheny Woodrat (*Neotoma magister*) - state endangered
- 2) PLANT
  - Bottomland Broomrape (*Orobanche riparia*) - state endangered

The Bottomland Broomrape is a floodplain species and has been mapped on high level terraces very close to the project area. It is more likely to be found on Site 10a or 10b rather than the previously disturbed Site 10. For Site 10, the Division of Nature Preserves recommends that the proposed boat ramp be built in the previously disturbed site.

**State of Indiana  
DEPARTMENT OF NATURAL RESOURCES  
Division of Fish and Wildlife**

**Early Coordination/Environmental Assessment**

**Fish & Wildlife Comments:** The following are comments regarding the listed animal species above.

1) Ohio Pigtoe:  
Since areas for the boat ramps are far removed from mussel bed locations, and construction activities should be minimal, we do not foresee any impacts to this species.

2) Peregrin Falcon:  
A Peregrin Falcon pair was known to occur at the SR 135 bridge a few years ago, but they have not been seen in recent years. The proposed boat ramp near Site 10 would not result in impacts to a peregrine falcon pair if they occur at the bridge site again in the future.

3) Allegheny Woodrat:  
We do not foresee any impacts to the Allegheny Woodrat resulting from the project.

If Site 5 (SR 111 and SR 211) is selected, we recommend:

- Avoiding impacts to the creek flowing through the middle of the site and to its forested riparian corridor.
- Minimizing impacts to the Ohio River's forested riparian corridor and mitigate impacts as follows:
  - a) Impacts to non-wetland forest under 1 acre should be mitigated at a 1:1 ratio.
  - b) Impacts to non-wetland forest over 1 acre should be mitigated at a minimum 2:1 ratio.

If Site 10 (Mauckport) is selected, we recommend:

- Minimizing impacts to the Ohio River's forested riparian corridor and mitigate impacts as follows:
  - a) Impacts to non-wetland forest under 1 acre should be mitigated by planting 5 trees 1" to 2" in diameter-at-breast height (dbh) for each tree which is removed that is 10" dbh or greater.
  - b) Impacts to non-wetland forest over 1 acre should be mitigated at a minimum 2:1 ratio.

Provide a smooth surface along the banks by using open-celled concrete block mats instead of riprap for bank armoring. Revegetate the area with native herbaceous species (any native seed mix should contain at least 10 species including native grasses and sedges).

If riprap is used, naturalize the riprap area by inserting live cuttings through the riprap layer 1-2' into the soil below at a density of 2-6 cuttings per square yard. For more information, see <http://directives.sc.egov.usda.gov/OpenNonWebContent.aspx?content=17553.wba>, page 16-28 (joint planting technique).

The following species are suitable for live cuttings:

- Buttonbush (*Cephalanthus occidentalis*);
- Silky dogwood (*Cornus amomum*);
- Gray dogwood (*Cornus racemosa*);
- Snowberry (*Symphoricarpos alba*);
- Pussy willow (*Salix discolor*);
- Sandbar willow (*Salix interior*);
- Elderberry (*Sambucus canadensis*);
- Nannyberry (*Viburnum lentago*); and
- Arrowwood (*Viburnum dentatum*)

**THIS IS NOT A PERMIT**

**State of Indiana  
DEPARTMENT OF NATURAL RESOURCES  
Division of Fish and Wildlife**

**Early Coordination/Environmental Assessment**

---

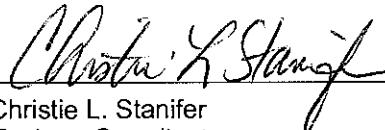

Additional measures that should be implemented to avoid, minimize, or compensate for impacts to fish, wildlife, and botanical resources, include the following:

1. Revegetate all bare and disturbed areas in the floodway with a mixture of native grasses, sedges, wildflowers, and also native hardwood trees and shrubs as soon as possible upon completion. Do not use any varieties of Tall Fescue or other non-native plants (e.g. crown-vetch).
2. Minimize and contain within the project limits inchannel disturbance and the clearing of trees and brush.
3. Do not work in the waterway from April 1 through June 30 without the prior written approval of the Division of Fish and Wildlife.
4. Do not cut any trees suitable for Indiana bat roosting (greater than 3 inches dbh, living or dead, with loose hanging bark) from April 1 through September 30.
5. Use minimum average 6 inch graded riprap stone extended below the normal water level to provide habitat for aquatic organisms in the voids.
6. Plant native hardwood trees along the top of the bank and right-of-way to replace the vegetation destroyed during construction.
7. Post "Do Not Mow or Spray" signs along the right-of-way.
8. Appropriately designed measures for controlling erosion and sediment must be implemented to prevent sediment from entering the stream or leaving the construction site; maintain these measures until construction is complete and all disturbed areas are stabilized.
9. Seed and protect all disturbed slopes that are 3:1 or steeper with erosion control blankets (follow manufacturer's recommendations for selection and installation; seed and apply mulch on all other disturbed areas.

RE: Harrison County Boat Ramp Study

Dear Property Owner,

Harrison County has contracted with Strand Associates to coordinate with local and environmental officials to identify two potential sites for an Ohio River boat ramp. These sites would provide public access points to the Ohio River and could also include other amenities such as fishing areas, a shelter-house, a playground, and other recreational amenities. For accessibility purposes, we anticipate that the locations recommended will be reasonably near SR 135 at the Ohio River and SR 211 at the Ohio River, but this will be determined for certain by the study.

You are receiving this letter because you have been identified as an owner of property adjacent to the Ohio River. If you have any information you feel would assist Harrison County in this process, we would like to hear from you. If you would like for your property to be considered for this, or to be specifically left out of consideration, please let us know.

You can contact us by email at [k.russel@harrisoncounty.in.gov](mailto:k.russel@harrisoncounty.in.gov). You may also contact us by phone or by US mail as shown at the top and bottom of this page.

Sincerely,

*Please respond back by?*

Kevin J. Russel, PE  
Harrison County Engineer

Agenda  
Public Information Meeting  
Harrison County Boat Ramp Study  
Harrison County, Indiana  
June 20, 2012, 7 P.M.

Meeting Location: First Floor Banquet Room, Harrison County Government Center

Meeting Purpose: Present the Harrison County Boat Ramp Study

1. Welcome and introduction of county officials and consultants.
2. General statement about project and the goals of the study.
3. Presentation of findings included in the draft report.
4. Opportunity for county officials to speak.
4. Informal question and answer.

c: All Participants

## Boat ramp site narrowed to 2

by Ross Schulz

June 26, 2012

*Nearly 50 Harrison County residents and other interested parties gathered last Wednesday night at the Harrison County Government Center to learn more about the potential Ohio River boat ramp project.*

*Strand Associates, the group hired to complete the site location study, narrowed the list to two main sites: one near the meeting of state roads 211 and 111 and the other in Mauckport near S.R. 135.*

*Harrison County's southern border has 45 miles of shoreline along the Ohio River with only one public boat ramp for citizens to use, but the ramp is not well-maintained or suitable for more than a few boats.*

*The county has 4,198 registered fishing licenses and an additional 9,305 boaters registered in Harrison, Crawford, Floyd and Washington counties.*

*"A public boat ramp would not only grant river access to Harrison County citizens, but also encourage those from the surrounding counties to visit," a Strand Associates representative said.*

*The Harrison County Commissioners, if they vote to proceed with the project, will have the final say on which site to select, and then would request funding from the county council.*

*The estimated total cost of the site near Elizabeth is \$1.8 million while the Mauckport site comes in at \$1.2 million. Both estimates include the total package of amenities including sports fields, walking paths, concession areas, rest rooms, benches, picnic tables, grills, boat loading piers, parking lots, shelter houses, playgrounds, splash parks and amphitheaters. The Elizabeth site could also include a campground.*

*The group spoke about multiple grants that could be secured to help pay for the project, including the Harrison County Community Foundation and Land and Water Conservation Fund.*

*The recommended site near Elizabeth is located immediately south of the intersection of state roads 211 and 111. The parcel is split by S.R. 111, leaving 31 acres directly along the river and 38 acres on the other side of S.R. 111, which Strand Associates recommends for camping. The site is 85 percent woodland and 14 percent tillable land and has 0.22 mile of shoreline and 0.22 mile of road frontage.*

*"The site contains ample footage of both road access and river access," Strand representatives said.*

*The property owners are Burl, Doris and Sandy Hoke.*

*The recommended sites for the Mauckport project includes the existing public boat ramp. The site could include three parcels, all an acre or less in size, which is 53 percent woodland and 46 percent tillable. It has .13 mile of shoreline and 0.04 mile of road frontage to Main Street.*

*Stanley Kingsley is the owner of the southern two parcels, and the town of Mauckport owns the other.*

*Strand representatives said there's no known negative environmental impacts on either the Mauckport or Elizabeth sites, but archeological studies have yet to be completed.*

Strand Associates representative Eric Brunn speaks about the boat ramp project last Wednesday evening at a public meeting in the Government Center in Corydon. Photo by Ross Schulz

*County engineer Kevin Russel said the Harrison County Parks Department would most likely be responsible for maintaining the boat ramp area.*

*As for a timeline for construction, Russel said everything would have to go smooth with approval of the board of commissioners and county council for it to begin next summer.*

*Hugh Burns, Elizabeth town manager, said he and the town support the project, as does Posey Township Trustee Steve Smith.*

## Comments from Public Information Meeting:

**From:** Nina Faith [<mailto:nlfaith@frontier.com>]

**Sent:** Friday, June 22, 2012 11:00 AM

**To:** [k.russel@harrisoncounty.in.gov](mailto:k.russel@harrisoncounty.in.gov)

**Subject:** Mauckport site boat ramp plan

Kevin,

I would like to give my personal opinion on the Ohio River Boat Ramp project.

I think the Mauckport plan is a good idea. The area is easy to get to by way of SR 135, SR 11 and SR 79 in Brandenburg, Ky. A four-lane highway has been built in Kentucky and possibly four-lanes will be built on the Indiana side in the future.

The Mauckport site has adequate fire protection from a firehouse in the town and another firehouse in Central, about 3 miles north on SR 135. The firemen have adequate training fighting fires that might occur and medical training for personal safety.

The boat ramp plan might encourage local people to start some small business, such as, service station, bait shop or restuarant. Also, a few people around the area might be employed at the park.

I have heard that some people think the boat ramp at Brandenburg was built too steep to launch their boat, therefore, they put in at Mauckport.

I have had some relatives from other states visit with our family through the years and they thought the Ohio River was beautiful, so we might as well take advantage of a resource already here.

5085 O'Bannon Road  
Elizabeth Indiana 47117

~~ SAILING ~~\_/\_) ~~

July 2, 2012

Kevin Russel, P.E.  
County Engineer  
245 Atwood Street Ste 217  
Corydon Indiana 47112  
Mr. Russel,

RE: Boat Ramp

I am writing regarding the proposed Harrison County boat ramps to be located at Elizabeth and/or Mauckport Indiana. I attended the public meeting and prior to that sent written support of the proposal to the County Commissioners. That letter will be forwarded to you also.

While amenities such as campgrounds; picnic areas; ball fields; and amphitheatres would not have a negative impact I would like a greater emphasis is placed on boaters' needs and on the features associated with boating. In my opinion the purpose of the ramps is to create convenient use of the Ohio River. See my following recommendations:

1) Loading and unloading (LU) wharf/dock should be increased in size and in fact two separate LU docks should be constructed at each location. In my experience boaters are often waiting in line to access the LU dock. Quick loading and unloading increases public safety and enhances convenience.

2) Boat dock/slips need to be included. Docks would provide daylong, overnight, or longer, safe and secure tie ups. Boaters would travel longer distances and spend more time at the location if they did not have to pull their boat immediately after use and could instead keep the boat in the water. The family might spend the weekend camping or pursuing other local activities. The docks could be reserved for a fee or free. The design at each location needs to ensure sufficient docks are included and that future additional docks will be possible.

3) The slope of the boat ramps need to be able to handle fixed-keel sailboats. These boats require a steeper slope. Maximum boat length would need to be determined. Providing a steep slope ramp will allow access for a greater variety of boats.

4) The first location to be considered should be Mauckport. Pulling a boat, especially one of any size, along Hwy. 135 would be much easier than traveling the windy roads of Elizabeth. In addition, I believe the sailing events which we can develop after a ramp is completed would be best suited for the Mauckport location with participants traveling from other counties and across the bridge from Kentucky. However, the Elizabeth site has advantages also by potentially drawing boaters from Louisville for special events.

While boating can be fun, handling a boat can also be stressful. Designing the boat ramps and the boating areas as convenient and enjoyable as possible increases public participation. The purpose of the ramps, in large part, is to increase public use of the Ohio River. Thank you for consideration of my comments.

Please include with Page 1:

I do not have an estimate regarding how many, but we know boaters travel the Ohio River from far north to reach the Gulf of Mexico and farther destinations. Adequate docks and related services located in Harrison County could be promoted to these travelers. Add to that our friendly hospitable citizens and we can create a well-known, welcoming mariner's dockage.

Commissioner James Goldman  
Commissioner Jim Klinstiver  
Commissioner Buck Mathes

Dear Commissioners,

I am writing in support of the proposed Harrison County boat ramp.

As someone who enjoys sailing I have found time spent on the Ohio River to be an always interesting experience based upon everchanging river conditions, weather and time of year.

During the summer months and into fall I am a crew member during weekly Wednesday night Derby City Sailing races. I've sailed since 2004 and completed various training programs locally and elsewhere. I also volunteer with River Cities Community Sailing Program during the Learn-To-Sail Clinic held each year at which time youth groups and adults alike are introduced to sailing.

With adequate river access I believe we could develop a sailing community in Harrison County. It would be a new and exciting sport for all ages. I would enjoy establishing our own Learn-To-Sail Clinics and teaching participants how to sail.

In researching whether we could promote our stretch of the Ohio River as a desirable sailing destination and tourist attraction I contacted one of my sailing instructors, Captain Joe Brown. I have attached his letter of support.

I believe the boat ramp will allow and perhaps introduce community access to one of our county's greatest local natural resources, the Ohio River.

Sincerley,
