406.04 COMPUTATIONS

The following principles shall control the computation of sign area and sign height:

- a. **Computation of Area of Individual Signs:** The area of a sign face (which is also the sign area of a wall sign or other sign with only one face) shall be computed by means of the smallest square, circle, rectangle, triangle, or combination thereof that will encompass the extreme limits of the writing, representation, emblem, or other display, together with any material or color forming an integral part of the background of the display or used to differentiate the sign from the backdrop or structure against which it is placed, but not including any supporting framework, bracing, or decorative fence or wall when such fence or wall otherwise meets zoning ordinance regulations and is clearly incidental to the display itself.
- b. **Computation of Area of Multi-faced Signs:** The sign area for a sign with more than one

face shall be computed by adding together the area of all sign faces visible from any one point. When two identical sign faces are placed back-to-back, so that both sign faces cannot be viewed at the same time, and when such sign faces are part of the same sign structure and are not more than 42 inches apart, the sign area shall be computed by the measurement of one of the faces.

- c. **Computation of Height:** The height of a sign shall be computed as the distance from the base of the sign at normal grade to the top of the highest attached component of the sign. Normal grade shall be construed to be the lower of (1) existing grade prior to construction or (2) the newly established grade after construction, exclusive of any filling, berming, mounding, or excavating solely for the purpose of locating the sign. In cases where the normal grade cannot reasonably be determined, sign height shall be computed on the assumption that the elevation of the normal grade at the base of the sign is equal to the elevation of the nearest point of the crown of a public street or the grade of the land at the principal structure on the lot, whichever is less. In situations where existing grade is below the crown of the public street that provide access to the property on which the sign is located the height of the crown of the street may be used as the normal grade for the purposes of measuring the height of the sign.
- d. **Computation of Maximum Total Permitted Sign Area for a lot:** The permitted sum of the area of all individual signs on a lot shall be computed by applying the formula contained in Table 2, Maximum Total Sign Area, for the zoning district in which the lot is located.

(As Amended by Ord. #2014-05)
