DEPARTMENT OF LOCAL GOVERNMENT FINANCE

INDIANA GOVERNMENT CENTER NORTH  
100 NORTH SENATE AVENUE N1058  
INDIANAPOLIS, IN 46204  
PHONE (317) 232-3777  
FAX (317) 232-8779

**To:** Governor Mitchell E. Daniels, Jr.

**From:** Brian Bailey, Interim Commissioner

**Copy:** Members of the Indiana General Assembly

**Date:** May 1, 2010

**Subject:** Report on Expenditures per Capita

The attached Expenditures per Capita report is filed in accordance with IC 6-1.1-33.5-7. The report, prepared by the Data Analysis Division of the Department of Local Government Finance (“Department”), presents a compilation of each political subdivision’s expenditures per capita based on 2008 and 2009 information provided by the unit’s annual financial report. Data was compiled according to the type of political subdivision—counties, townships, cities/towns, schools, libraries, special units, and conservancy districts.

The Indiana Code calls for a report that includes each political subdivision’s total amount of expenditures per person based on the most recent federal decennial census and based on the information gathered by the Department. The Department has determined the highest, lowest, median, and average expenditures per person for each political subdivision.

To view the report, please visit the following web site: [www.in.gov/dlgf/5078/](http://www.in.gov/dlgf/5078/). The report will be updated to reflect any new data that has arrived since the initial publication. As always, please feel free to contact me with any questions you may have.

## **Overview of the Expenditure per Capita Report**

This report provides an annual compilation of the total expenditure per person of each political subdivision with the authority to raise a property tax levy. Expenditure information reported here reflects calendar year expenditures for each unit as reported by the unit. The expenditures are the actual disbursements made by the unit and may be different from both the tax revenue received and the total budget appropriations authorized. These expenditures have not been audited by the State Board of Accounts.

A unit's per capita expenditure is the sum of all its expenditures for a given year divided by the unit's population. Measuring expenditure on a per capita basis provides a benchmark for comparing the expenditures of units who have populations. While these comparisons can be revealing, it is important to note that per capita expenditure does not measure a unit's efficiency in providing services, because the scope and quality of services provided varies widely both within units and across unit types.

Except for data on school expenditures, all expenditure data are drawn from the 2008 and 2009 Annual Reports filed by each unit with the State Board of Accounts, as presented to the Department of Local Government Finance ("Department") through the State Board of Accounts database. School expenditure information was provided by the Department of Education. The Department acknowledges the assistance of the State Board of Accounts and the Department of Education in providing information required for this report.

Annual Reports for 2009 were required by law to be submitted not later than March 1, 2010. However, not all political subdivisions have filed their 2009 annual reports. The notation "Data Not Provided" in the 2009 expenditure column indicates that the subdivision has not yet reported its data for 2009. The percentage of subdivisions that reported expenditure data for 2009 is as follows:

- Counties (84%)
- Townships (83%)
- City/Towns (72%)
- Schools (84%)
- Libraries (87%)
- Special Units (Solid Waste) (82%)
- Special Units (All Other) (31%)
- Conservancies (40%)

To facilitate comparison between years, 2008 per capita expenditures for all units were drawn directly from the 2009 Expenditure Per Capita Report. If a unit amended its 2008 Annual Report, the amended amount may be different from the amount reported here. Units whose per capita expenditure was listed as "Data Not Provided" in the 2009 Expenditure Capita Report are also listed that way here; these units may or may not have reported their 2008 Annual Report data in the interim between the two reports.

As required by IC 6-1.1-33.5-7, this report is filed by the Department with the Governor and Members of the General Assembly. Individuals may view the report on the Department's web site at [www.in.gov/dlgf](http://www.in.gov/dlgf) or request a copy by writing to the Department at:

Department of Local Government Finance  
Division of Data Analysis  
100 N. Senate Avenue, Room N1058  
Indianapolis, IN 46204

### **Reading the Report**

Expenditure data for all included units are reported by unit type. All units other than counties are further categorized according to the county in which they provide service. All units except counties and townships may provide services to more than one county; these units are listed once under the county with the greater share of the unit's constituency.

For all units except Special Districts (Other) and Conservancy Districts, expenditure data are reported per capita. As census data are not available for these remaining units, the unit's total expenditure is reported instead.

Several descriptive statistics are presented for each unit type:

- The Mean (or Average) is the total expenditure for each unit type divided by the number of units. It provides a measure of the average unit's expenditure for that type. Care must be taken in interpreting the mean, because it is strongly affected by unit expenditures that are very high or very low.
- The Median is the expenditure for each unit type that separates the expenditures in two equal groups. Half of these expenditures will be greater than the median, and half will be less. The median is a better indicator of the typical unit's expenditure when there are many units with expenditures that are very high or very low.
- The Maximum is the greatest unit expenditure per capita for each unit type. Likewise, the Minimum is the smallest unit expenditure per capita for each unit type.

## **Methodology**

Expenditure data for schools, townships, special districts, and conservancies were drawn directly from electronic copies of the 2009 Annual Report submitted to the State Board of Accounts by these units. The figure reported for Disbursements was used. As only aggregate data were reported, no fund-level analysis was done for these units.

Expenditure data for counties, cities and town, and libraries were drawn from a database provided by the State Board of Accounts. This database included fund-level disbursements for each of these units as well as classification of expenditures by type.

Aggregate expenditure data for counties, cities and towns, and libraries were calculated by totaling all fund-level disbursements by unit. For cities and towns and libraries, all expenditure classes were included. For counties, expenditure classes that represented the distribution of tax revenue by the county to subordinate units of government were excluded from the total. This ensures that expenditures by other units of government made from county tax distributions are not counted twice.

All census data were drawn from the 2000 United States Census. As the Census is conducted every 10 years, these are the most recent census data available.

## Counties

County government in Indiana is responsible for providing services including:

- Law enforcement (including sheriff services and jails)
- Elections
- Civil and Criminal Courts
- Health Services

Officials in county government also administer the property tax system.

Services provided by counties generally do not differ across the state; therefore, disparities in spending levels are likely caused by differing levels of current capital investment and differing levels of efficiency.

Indiana has 92 counties. Based on the 2000 Census, these range in population from 5,623 (Ohio County) to 860,454 (Marion County).

Counties are unique among local units in that they distribute tax revenue to other local units. These disbursements are not true expenditures. In the 2008 Expenditure Per Capita Report, individual funds for each county were examined to exclude such disbursements. This practice could not be usefully continued because counties do not always use the same fund structure from year to year. Instead, data were provided by the State Board of Accounts allowing disbursements involving the transfer of tax revenue to be identified and excluded. This change in methodology must be considered when comparing expenditures over time for a given county.

The mean per capita expenditure for all reporting counties was \$913. This must be interpreted with caution due to the presence of very large and small expenditures. There is substantial variation in the amount spent by different counties. The median (\$645) is also substantially less than the mean, which suggests that this variation is not uniform among all types of counties and that factors other than county population need to be controlled to make meaningful comparisons.

## **Townships**

Township government in Indiana provides services including monetary and in-kind assistance to taxpayers in need, as well as fire protection and other services to areas without other forms of municipal government.

There are currently 1,008 townships in Indiana, with populations ranging from 44 to 167,055. This wide variation in population along with other demographic factors result in townships offering varying combinations and levels of services. For example, smaller rural townships often utilize volunteer fire departments, while more urban townships may provide a full-time fire department or contract with a municipal fire department. The amount of township assistance provided will vary both in relation to poverty levels and as a result of differing qualification standards.

The advent of fire protection districts and territories has allowed many townships, cities, and towns to join forces to minimize operating costs while providing this essential service. The complexity of funding these districts makes it difficult to meaningfully compare township expenditures purely on a per capita basis. A township may have lower expenditures than average because its expenditures on fire protection are reported by the consolidated fire protection district. Conversely, a township that purchases a capital asset such as a fire truck may have higher expenditures than average, even though the fire truck is used to provide service through the fire protection district. Townships may also contribute to funding services such as Emergency Medical Services (EMS) and parks that are utilized by taxpayers both inside and outside township boundaries.

The mean per capita expenditure for all reporting townships was \$62. As with county data, this must be interpreted with caution due to the presence of very large and small expenditures. There is substantial variation in the amount spent by different townships. As with county data, the disparity between median (\$35) and mean indicates that other factors beyond population impact expenditure levels; unlike counties, however, the additional complexity brought about by township involvement in fire protection districts and territories must also be analyzed prior to a meaningful comparison.

Township expenditures are grouped by county; since townships cannot be cross-county units, each township is listed once.

## **Cities and Towns**

Cities and towns in Indiana are responsible for providing services including police, fire protection, and developmental planning. There are currently 563 cities and towns in Indiana (excluding Indianapolis), with populations ranging from 1 (New Amsterdam Town) to 224,978 (Fort Wayne City). As with townships, the level of service depends greatly on the needs of taxpayers as well as population size.

Differences in expenditure levels between cities and towns have many causes in addition to varying levels of efficiency. First, numerous cities and towns receive large amounts of revenue from specialized sources such as gambling riverboats. In addition, some cities and towns provide utility services, such as electrical, water, sewer, and solid waste removal. Units that provide these services may have greater per capita expenditures than units that do not. As with townships, cities and towns often join fire protection districts or territories, further increasing the complexity of comparing expenditure to level of service.

The mean per capita expenditure for all reporting cities and towns was \$1,146; as noted before, this must be interpreted with caution due to the presence of very large and small expenditures. Again, there is substantial variation in the amount spent by different municipalities. The disparity between median (\$827) and mean indicates that other factors beyond population impact expenditure levels; in particular, economies of scale may be present in larger cities and towns that reduce the net cost of providing a given level of service to taxpayers.

City and town expenditures are grouped by county. Each unit is listed only once; units that serve populations in more than one county are listed under the county with the greater share of the unit's constituency.

## Schools

School corporations in Indiana provide primary and secondary education to students. There are currently 293 school corporations in Indiana, with populations ranging from 220 (Prairie Township School Corporation) to 328,785 (Indianapolis Public School Corporation). Not surprisingly, these school corporations also have the smallest and largest number of students (30 and 38,018, respectively). Many school corporations provide transportation to and from school facilities and finance school buildings in addition to the core responsibility of educating children.

In addition to variations in efficiency, differences in school expenditures are likely related to differences in spending on capital projects (such as buildings), transportation needs, and school programs (such as special needs education). The variation in capital project spending is now a function of voter preference, since large projects must be approved in a referendum as of July 1, 2008. The cost of transporting students varies based on the geographic area of the school corporation. Similar realities impact the level of school corporations spending on school programs. Different student populations have distinct and varied needs that are not easily quantified. The cost of programs to meet these needs depends on the makeup of the underlying student population and local economic conditions. These factors need to be considered for a meaningful comparison of expenditure data across school corporations.

The mean per capita (per resident of the school corporation, not per student) expenditure for all reporting public school corporations is \$1,952; care again must be taken in interpreting this statistic due to the presence of very large and small expenditures. There is substantially less variation in spending among school corporations than the other unit types discussed in this report. In addition, the similarity of the median (\$1,842) and mean expenditure suggest that this variation is more consistent within school corporations than with other unit types. The allocation of tax revenue to school corporations via the school funding formula, which closely links the amount of money a school corporation receives with the size of the student population, is a key reason for this. While care must still be taken to consider all relevant factors in comparing school corporations via per capita expenditure, these comparisons are more likely to yield useful information than with other unit types.

## **Libraries**

Pursuant to IC 36-12-1-8(b), “public libraries provide free library services for all individuals in order to meet the education, information, and recreational interests and needs of the public.” Accordingly, libraries in Indiana provide books, magazines, newspapers, and other reference material to library patrons on a short-term basis. In addition, the increasing importance of access to technological resources means that libraries are often relied upon to provide computer and Internet services.

There are currently 240 library systems in Indiana, serving populations ranging from 241 to 832,693. Library systems are usually created by cities or counties and have boards appointed by the government that created them.

The mean per capita expenditure for all reporting library systems was \$109; as noted before, this must be interpreted with caution due to the presence of very large and small expenditures. There is substantial variation in the amount spent by different library systems. Again, the disparity between median (\$78) and mean (\$109) indicates that other factors beyond population impact expenditure levels.

Library system expenditures are grouped by county. Each unit is listed only once; units that serve populations in more than one county are listed under the county with the greater share of the unit’s constituency.

## Special Districts

Needs for governmental services that are not met by counties, townships, cities and towns, schools, or libraries are often met by unit types referred to as Special Districts. The main types of Special Districts in Indiana are:

- Solid Waste
- Airport Authority
- Fire Protection
- Transportation
- Water

Every county is either part of a multi-county solid waste district, or has its own solid waste district. Therefore, determining the per capita expenditure for these districts is straightforward, and expenditure levels are presented here on a per capita basis.

Determining the population served is not easy for the other types of Special Districts; therefore, per capita expenditure is not a meaningful comparison for these other districts. The total gross expenditure for these districts is instead provided.

The mean per capita expenditure for all reporting solid waste districts was \$16; as noted before, this must be interpreted with caution due to the presence of very large and small expenditures. As with most other unit types, there is substantial variation in the amount spent by different districts. Again, the disparity between median (\$10) and mean (\$16) indicates that other factors beyond population impact expenditure levels.

The mean total gross expenditure of other Special Districts is \$3,178,646. Here the caveats regarding differences among expenditure levels are even more important, as there is a very large amount of variation in expenditure level for these units. Since the expenditures are not normalized on a per capita basis, greater variation is to be expected. Comparisons of expenditure levels between different types of non-solid waste Special Districts are not meaningful, and even comparisons between similar types are difficult due to the unique legal and financial conditions each district operates under.

Special District expenditures are grouped by county. Each unit is listed only once; units that serve populations in more than one county are listed under the county with the greater share of the unit's constituency.

## **Conservancy Districts**

Conservancy districts in Indiana are established for many purposes: flood prevention and control; drainage improvement; irrigation management; and wildlife and forest development. These districts are unique because they are established through the local court and are not handled the same way as other political subdivisions. Conservancy districts are not subject to maximum levy limitations, and the tax rate applied to a conservancy district is calculated separately from the tax district rate.

Conservancy districts have well-established boundaries; however, the United States Census Bureau does not track population within these boundaries. For this reason, the data provided here are total gross expenditure rather than per capita expenditure.

The mean total gross expenditure of conservancy districts is \$832,752. As with special districts (other than solid-waste districts), there is a very large amount of variation in expenditure level for these units. Since the expenditures are not normalized on a per capita basis, greater variation is to be expected.

Conservancy district expenditures are grouped by county. Each unit is listed only once; units that serve populations in more than one county are listed under the county with the greater share of the unit's constituency.
