LaPorte County-Wide Regulatory Update

This project created new regulatory controls on developments within LaPorte County. Specifically, within the Coastal boundary, this project will protect/preserve water systems, animal/plant habitats, and pollution of the air, water, and land. Our Comprehensive Plan had identified the Coastal boundary as an area of La Porte County which will have increasing developmental pressures placed upon it in the future. This project allowed the county to be prepared with the correct planning tools to manage the effects of said developments on the natural environment of the area so future developments will work in harmony with nature, not destroy it.
