

Hoosier Prairie Nature Preserve

County: Lake Size: 430 acres
Ownership: Nature Preserves - IDNR

Location and Access

Parking and trail. From US 41 go east on Main St. toward Griffith. The parking lot is on your right after crossing Kennedy Ave. A one-mile, self-guiding trail leads into the prairie from this lot. The first portion of the trail is handicap accessible and the rest of the trail is level, easy walking on a natural surface trail. There can be areas of standing water on the trail after precipitation events. The preserve is closed on days when prescribed fires are scheduled.

Description: Hoosier Prairie is a large remnant of the prairie landscape that was once common in northwest Indiana. This tract preserves the topographic and biotic diversity of the sand plains north of the Valparaiso Moraine. Plant diversity is exceptionally high here due to a wide range of moisture conditions. Sand rises support dry black oak savannas. Mesic sand prairie openings can be found on slopes between the rises and swales. Wet prairies, sedge meadows and marshes are scattered throughout the preserve in depressions and flats. Its size and plant diversity make Hoosier Prairie an excellent place to see native birds and other animals in their natural surroundings. Many of these animals are now rare in Indiana due to the disappearance of their native habitats. Prior to European settlement, fire was a normal part of prairie ecosystems. Fire killed the forest trees, but prairie plants were adapted to frequent fires and survived. When settlers suppressed wild fires, woody plants invaded the prairie. Now carefully controlled fires are used to maintain the prairie as it was before settlement.
