

NOTES:

- ① When the face of the guardrail is offset 0 or 300 from the edge of the paved shoulder, the width of the drive shoulder, S, must be increased to maintain the 1200 minimum distance between the face of the guardrail and the edge of the drive.
 - ② For mainline paved shoulder widths equal to or greater than 2400 the drive radii should be referenced from the edge of the mainline paved shoulder rather than as shown
3. See Standard Drawing 601-CWGS-03 for other General Notes.
