INDIANA NEURO-DIAGNOSTIC INSTITUTE

Overview:
- The state of Indiana has selected Community Health Network as its partner for the development of a new Neuro-Diagnostic Institute, which will be constructed on the grounds of Community East Hospital in Indianapolis.

- The institute will deliver expert neuro-diagnostic evaluation and treatment for patients upon their arrival and move them more efficiently into the most appropriate treatment settings within the community or state mental health system.

- The institute will be the “flagship” of Indiana’s network of state-operated mental health facilities.

- This institute will have the projected capacity to treat 1,500 patients per year and will have 159 beds for in-patient care.

- The new center will cost approximately $120 million and will be financed through 20-year-taxable bonds.

- Construction is anticipated to begin in the first quarter of 2016, with completion in September 2018.

The focus of care:
- *Neuro* is a word that pertains to the brain. *Diagnostic* reflects the techniques used in diagnosing illnesses.

- This new institute will focus on the precise diagnosis and assertive treatment of brain-based disorders, including:
  - acute and chronic mental illness
  - chronic addictions
  - intellectual and developmental disabilities
  - traumatic brain injury
  - neuro-degenerative illnesses such as Alzheimer’s disease

- The term “neuro-diagnostic” also encompasses the integration of medical care, which will be made possible by locating the institute at Community East Hospital

- The new institute will initiate a modern model of care focused on comprehensive diagnosis and expert-driven treatment plans.

Background:
- The state of Indiana owns and operates a statewide network of six facilities for the treatment and care of persons with mental illness.

- In 2014, the state began an effort to integrate these facilities and other elements of the public mental health system into a comprehensive, integrated mental health network.

- The state plans to eventually replace one of the state’s six current facilities, Larue Carter Hospital in Indianapolis, with the new cutting-edge institute that will complement the development of a state-operated facility network and improve quality of care for all patients.
