

EVANSVILLE STATE HOSPITAL
Facility Fact Sheet
SFY 2011

Evansville State Hospital has served persons with severe mental illness since 1890 and continues its mission of Hope and Recovery. A replacement hospital, with a capacity for 168 patients, was opened on the original hospital campus in September, 2003. The Golden Trowel award was presented to the hospital for use of innovative “green” building materials.

Evansville State Hospital continues to maintain Joint Commission (JC) certification and certification as an Intermediate Care Facility for the Mentally Retarded (ICF/MR). Evansville also maintains certification as a Psychiatric Medicaid/Medicare Hospital through deemed status from our JC accreditation. Maintaining this accreditation and certification ensures continued reimbursement streams.

The hospital is composed of three service lines that provide care to adults with severe mental illness, some of whom are developmentally disabled. All service lines consist of male and female patients. Service lines are:

- **Development Training Services:** This 32 bed unit is an Intermediate Care Facility for the Mentally Retarded (ICF/MR).
- **Geriatric Services/Medical:** This 34 bed unit provides treatment for the geriatric and medically fragile population.
- **Admissions and Adult Continuing Treatment Services:** These three units with a total of 102 beds provide treatment for new patient admissions and all other patients that continue to require active treatment for a serious mental illness.

This hospital does not have a specific forensic unit, but does admit individuals who have legal involvement, such as those individuals determined to be Incompetent to Stand Trial (ICST); patients with legal charges pending; and some Department of Correction (DOC) outdates--those that need continued mental health treatment following DOC confinement.

The gatekeeper for individuals who have legal involvement is FSSA’s Office of General Counsel, who determines appropriate placement. Individuals with charges involving behavior which would require a more secure environment would be referred to the forensic unit (Isaac Ray) at Logansport State Hospital. This hospital, as well as the other hospitals in our system, receive what is referred to as “step downs” from Isaac Ray with approval from DMHA Office of General Counsel when it is determined the client would be more appropriately placed in a less restrictive environment than the Isaac Ray Treatment Center.

Treatment is individualized through interdisciplinary assessments with a recovery focus and may include stabilization of symptoms through psychopharmacology, management

of medical problems, individual and group therapy, Dialectical Behavior Therapy (DBT), Wellness Recovery Action Plan (WRAP), Expressive Therapy, Team Solutions, patient and family education, rehabilitation and recreation therapy, academic and skills training, vocational training, and supported employment.

Various types of training programs use biopsychosocial learning programs, including groups on medication management, anger management, coping skills, community reintegration, social skills development, and Adult Living Skills such as money management, cooking etc.
