What is NCI?
The National Core Indicators (NCI) program is a voluntary effort by state developmental disability agencies to gauge their own performance using a common and nationally validated set of measures. The effort is coordinated by the National Association of State Directors of Developmental Disabilities Services (NASDDDS) in collaboration with the Human Services Research Institute (HSRI). NCI has developed a set of more than 100 standard performance measures (or “indicators”) that states use to assess the outcomes of services provided to individuals and their families. These indicators focus on areas such as: employment, rights, service planning, community inclusion, choice, health, and safety. For the 2012-13 data collection cycle, 33 states and 22 sub-state entities participated in NCI.

What is the NCI Adult Consumer Survey?
The NCI Adult Consumer Survey is an interview conducted with a person who is receiving services from the state; it is used to gather data on approximately 60 consumer outcomes, and it is regularly refined and tested to ensure that it is valid and reliable. Interviewers meet with individuals to ask questions about where they live and work, the kinds of choices they make, the activities they participate in within their communities, their relationships with friends and family, and their health and well-being.

What topics are covered by the survey?
The National Core Indicators are organized by “domains” or topics. These domains are further broken down into sub-domains, each of which has a statement that indicates the concerns being measured. Each sub-domain includes one or more “indicators” of how the state performs in this area. The table on the following page lists the domains, sub-domains, and concern statements addressed by the NCI Adult Consumer Survey indicators.
<table>
<thead>

</tr>
<tr>
<td></td>
<td>Access</td>
<td>Publicly-funded services are readily available to individuals who need and qualify for them.</td>
</tr>
</tbody>
</table>
How were people selected to participate?

Each state is instructed to attempt to complete a minimum of 400 surveys with a random sample of individuals age 18 or older who are receiving at least one publicly funded service besides case management. A sample size of 400 allows valid comparisons to be made across states with a 95% confidence level and a +/- 5% margin of error. Both the confidence level and margin of error used are widely accepted for reviewing results, regardless of population size. Most states draw a sample greater than 400 to account for refusals and inaccurate contact information.

Proxy Respondents

Proxy responses are allowed only for the background information section of the survey (e.g., demographics) and for Section II (Community Inclusion, Choices, Respect/Rights, and Access to Needed Services), which is based on objective measures. Proxy respondents are used only when the individual cannot complete the survey or chooses to have a proxy respondent. Only people who know the individual well – such as family, friends, or staff – are acceptable respondents. To avoid conflict of interest, service coordinators are not allowed to respond for individuals on their caseloads.

Limitations of Data

The NCI Adult Consumer Survey tool is not intended to be used for monitoring individuals or providers; instead, it assesses system-wide performance. The NCI Average should not be interpreted as necessarily defining “acceptable” levels of performance or satisfaction. Instead, it describes average levels of performance or satisfaction across the states. It is up to public managers, policy-makers, and other stakeholders to decide what is an acceptable or unacceptable result (i.e., scale score or percentage of individuals achieving the indicated outcome).
What is contained in this report?

This report compares the 2012-13 NCI Adult Consumer Survey demographic and individual outcome results from Indiana to the NCI Average (the average of all state percentages). Twenty-five (25) states and one sub-state entity participated in the Adult Consumer Survey during the 2012-2013 data collection cycle. All results are shown in chart form along with descriptive text to the right of each outcome chart.

Please note, if a state had fewer than 20 respondents to certain question, the state is excluded from the analysis for that particular question.

State and national data results for the NCI Adult Consumer Survey can also be found online at http://www.nationalcoreindicators.org.

*Categories are not mutually exclusive
Choice

*People make choices about their lives and are actively engaged in planning their services and supports.*
This graph illustrates that 66% of respondents from Indiana and 50% across NCI states reported that they chose or had some input in choosing where they live.

States ranged between 73% and 20%.

This graph illustrates that 72% of respondents from Indiana and 43% across NCI states reported that they chose or had some input in choosing the people with whom they live.

States ranged between 72% and 15%.
This graph illustrates that among respondents with a paid job in the community, 90% from Indiana and 84% across NCI states reported that they chose or had some input in choosing where they work.

States ranged between 100% and 60%.

This graph illustrates that among respondents with a day program or regular activity, 63% from Indiana and 58% across NCI states reported that they chose or had some input in choosing where they go during the day.

States ranged between 81% and 27%
This chart illustrates that 78% of respondents from Indiana and 62% across NCI states reported that they chose or were aware they could request to change the staff who help them at their home, job, or day program or regular activity.

States ranged between 92% and 14%.

This graph illustrates that 86% of respondents from Indiana and 81% across NCI states reported that they decide or have input in choosing their daily schedule.

States ranged between 95% and 50%.
This graph illustrates that 94% of respondents from Indiana and 90% across NCI states reported that they decide or have input in choosing how to spend free time.

States ranged between 97% and 66%.

This graph illustrates that 87% of respondents from Indiana and 87% across NCI states reported that they choose or have input in choosing how to spend their money.

States ranged between 96% and 60%.
This graph illustrates that 80% of respondents from Indiana and 60% across NCI states reported that they chose or were aware they could request to change their case manager/service coordinator.

States ranged between 94% and 15%. 
Community Inclusion

*People have support to participate in everyday community activities.*
This graph illustrates that 93% of respondents from Indiana and 88% across NCI states reported that they went out shopping in the past month.

States ranged between 97% and 75%.

This graph illustrates that respondents from Indiana went out shopping an average of 5.5 times in the past month, and respondents across NCI states went an average of 4.1 times.

States ranged between 7 and 3 times.
This graph illustrates that 89% of respondents from Indiana and 83% across NCI states reported that they went out on errands or for appointments in the past month.

States ranged between 94% and 53%.

This graph illustrates that respondents from Indiana went out on errands or for appointments and average of 3.9 times in the past month, and respondents across NCI states went an average of 2.9 times.

States ranged between 6.5 and 1.1 times.
This graph illustrates that 73% of respondents from Indiana and 71% across NCI states reported that they went out for entertainment in the past month.

States ranged between 83% and 53%.

This graph illustrates that respondents from Indiana went out for entertainment an average of 3.2 times in the past month, and respondents across NCI states went an average of 2.6 times.

States ranged between 3.5 and 1.4 times.
This graph illustrates that 89% of respondents from Indiana and 85% across NCI states reported that they went out to eat in the past month. States ranged between 94% and 75%.

This graph illustrates that respondents from Indiana went out to eat an average of 5.5 times in the past month, and respondents across NCI states went an average of 3.9 times. States ranged between 7.6 and 2.4 times.
This graph illustrates that 45% of respondents from Indiana and 49% across NCI states reported that they went out to a religious service or spiritual practice in the past month.

States ranged between 71% and 33%.

This graph illustrates respondents from Indiana went out to a religious service or spiritual practice an average of 1.9 times in the past month, and respondents across NCI states went an average of 1.8 times.

States ranged between 1.1 and 2.7 times.
This graph illustrates that 43% of respondents from Indiana and 58% across NCI states reported that they went out for exercise in the past month.

States ranged between 81% and 21%.

This graph illustrates respondents from Indiana went out for exercise an average of 4.0 times in the past month, and respondents across NCI states went an average of 6.9 times.

States ranged between 15.2 and 1.6 times.
This graph illustrates that 42% of respondents from Indiana and 46% across NCI states reported that they went out on vacation in the past year. States ranged between 65% and 18%.

This graph illustrates that respondents from Indiana went out on vacation an average of 0.7 times in the past year and respondents across NCI states went an average of 0.8 times. States ranged between 1.4 and 0.2 times.
Work

*People have support to find and maintain community integrated employment.*
This graph illustrates that 18% of respondents from Indiana and 15% across NCI states reported they had a paid job in the community. States ranged between 37% and 4%.

This graph illustrates that among respondents with a paid job in the community, the type of employment support they receive in Indiana and across NCI states are, respectively: 45% and 35% individually-supported, 52% and 33% competitive, and 3% and 32% group-supported. States ranged between 70% and 10% for individually-supported, 78% and 7% in competitive, and 69% and 3% in group-supported employment.
This graph illustrates that among respondents with a paid job in the community, the average hours they worked at their paid community job in a typical two-week period in Indiana and across NCI states by type of employment is, respectively: 25.6 and 25.4 individually-supported, 27.0 and 26.9 competitive, and 19.8 and 26.5 group-supported.

States ranged between and average of 39.8 and 14.2 hours in individually-supported, 48.0 and 16.2 in competitive, and 40.3 and 12.0 in group-supported employment in a typical two-week period.

This graph illustrates that among respondents with a paid job in the community, the average gross wages they earn from paid community employment in a typical two-week period in Indiana and across NCI states by type of employment is, respectively: $178.86 and $186.37 individually-supported, $227.53 and $207.62 competitive, and $103.33 and $148.35 group-supported.

States ranged between $347.08 and $110.43 in individually-supported, $344.52 and $73.86 in competitive, and $269.21 and $23.00 in group-supported employment in a typical two-week period.
This graph illustrates that among respondents with a paid job in the community, the average hourly wage earned from the paid community job a typical two-week period in Indiana and across NCI states by type of employment is, respectively: $8.22 and $8.48 individually-supported, $7.98 and $8.15 competitive, and $8.56 and $6.44 group-supported.

States ranged between $15.14 and $6.60 in individually-supported, $11.36 and $5.27 in competitive, and $8.56 and $2.89 in group-supported employment in a typical two-week period.

This graph illustrates that among respondents with a paid job in the community, 83% from Indiana and 81% across NCI states were reported to be working 10 out of the last 12 months in a paid community job.

States ranged between 89% and 69%.
This graph illustrates that among respondents with a paid community job, they worked an average of 81.5 months in Indiana and for an average of 66.2 months across NCI states. States ranged between an average of 97.0 and 40.2 months.

This graph illustrates that among respondents with a paid community job, 35% from Indiana and 26% across NCI states were reported to receive paid vacation or sick time at their paid community job. States ranged between 67% and 6%.
This graph illustrates that the percentage of respondents working in the most common job industries in Indiana and across NCI states are, respectively: 37% and 20% food preparation and service; 21% and 32% building and grounds cleaning or maintenance; 21% and 15% retail; 7% and 7% assembly, manufacturing, or packaging.

This graph illustrates that among respondents without a paid job in the community, 48% from Indiana and 49% across NCI states reported that they would like a paid job in the community.

States ranged between 64% and 33%.
This graph illustrates that 29% of respondents from Indiana and 24% across NCI states were reported to have community employment as a goal in their service plan.

States ranged between 40% and 11%.

This graph illustrates that 60% of respondents from Indiana and 72% across NCI states reported that they attend a day program or regular activity.

States ranged between 96% and 49%.
This graph illustrates that 32% of respondents from Indiana and 34% across NCI states reported that they do volunteer work.

States ranged between 62% and 20%.
Self-Determination

People have authority and are supported to direct and manage their own services.
This graph illustrates that 0% of respondents from Indiana and 11% across NCI states were reported to use a self-directed supports option. States ranged between 71% and 0%.
Relationships

*People have friends and relationships.*
This graph illustrates that 77% of respondents from Indiana and 77% across NCI states reported that they have friends other than family or paid staff.

States ranged between 91% and 50%.

This graph illustrates that 77% of respondents from Indiana and 80% across NCI states reported that they have a best friend (who may be family or paid staff).

States ranged between 91% and 61%.
This graph illustrates that 73% of respondents from Indiana and 79% across NCI states reported that they have the support needed to see their family when they want.

States ranged between 88% and 64%.

This graph illustrates that 68% of respondents from Indiana and 78% across NCI states reported that they have the support needed to see their friends when they want.

States ranged between 88% and 55%.
This graph illustrates that 41% of respondents from Indiana and 41% across NCI states reported that they feel lonely at least half the time.

States ranged between 85% and 33%.

This graph illustrates that 88% of respondents from Indiana and 84% across NCI states reported that they can date or can date with some restrictions.

States ranged between 97% and 75%.
This graph illustrates that 85% of respondents from Indiana and 86% across NCI states reported that they can help others if they want to. States ranged between 96% and 38%.
Satisfaction

*People are satisfied with the services and supports they receive.*
This graph illustrates that 87% of respondents from Indiana and 90% across NCI states reported that they like their home.

States ranged between 94% and 82%.

This graph illustrates that 85% of respondents from Indiana and 88% across NCI states reported that they like their neighborhood.

States ranged between 93% and 83%.
This graph illustrates that 29% of respondents from Indiana and 26% across NCI states reported that they want to live somewhere else. States ranged between 35% and 11%.

This graph illustrates that 66% of respondents from Indiana and 68% across NCI states reported that they talk with their neighbors at least some of the time. States ranged between 85% and 55%.
This graph illustrates that among respondents with a paid community job, 90% from Indiana and 92% across NCI states reported that they like where they work.

States ranged between 97% and 88%.

This graph illustrates that among respondents with a paid community job, 31% from Indiana and 28% across NCI states reported that they want to work somewhere else.

States ranged between 44% and 10%.
This graph illustrates that among respondents with a day program or regular activity, 84% from Indiana and 90% across NCI states reported that they like their day program or regular activity.

States ranged between 96% and 82%.

This graph illustrates that among respondents with a day program or regular activity, 28% from Indiana and 31% across NCI states reported that they want to go somewhere else or do something else during the day.

States ranged between 42% and 20%.
Service Coordination

*Case Managers/Service Coordinators are accessible, responsive, and support the person's participation in service planning.*
This graph illustrates that 90% of respondents from Indiana and 94% across NCI states reported that they met their case manager/service coordinator. States ranged between 99% and 85%.

This graph illustrates that 86% of respondents from Indiana and 87% across NCI states reported their case manager/service coordinator asks them what they want. States ranged between 98% and 72%.
This graph illustrates that 89% of respondents from Indiana and 88% across NCI states reported their case manager/service coordinator helps get them what they need.

States ranged between 97% and 70%.

This graph illustrates that 79% of respondents from Indiana and 75% across NCI states reported that if they leave a message, their case manager/service coordinator calls them back right away.

States ranged between 92% and 43%.
This graph illustrates that 92% of respondents from Indiana and 93% across NCI states reported their staff come when they are supposed to. States ranged between 98% and 83%.

This graph illustrates that 91% of respondents from Indiana and 91% across NCI states reported that they get the help they need to work out problems with their staff. States ranged between 96% and 83%.
This graph illustrates that 79% of respondents from Indiana and 85% across NCI states reported that they helped make their service plan.

States ranged between 96% and 50%.
**Access**

*Publicly-funded services are readily available to individuals who need and qualify for them.*
This graph illustrates that 81% of respondents from Indiana and 82% across NCI states reported that they get all the services they need. States ranged between 93% and 53%.

This graph illustrates that 89% of respondents from Indiana and 92% across NCI states reported their staff have enough training to meet their needs. States ranged between 96% and 86%.
This graph illustrates that 84% of respondents from Indiana and 83% across NCI states reported that they always have a way to get places when they want to go somewhere.

States ranged between 94% and 62%.

The chart illustrates the typical modes of transportation used, respectively, by respondents in Indiana and across NCI states: 8% and 11% via specialized transportation; 1% and 4% via taxi; 17% and 14% via public transportation; 20% and 50% via staff in provider vehicle; 59% and 39% receive transport from staff in staff’s car; 64% and 52% from family or friends; 22% and 19% transport themselves.
Health

People secure needed health services.
GRAPH 79. HAS A PRIMARY CARE DOCTOR

This graph illustrates that 97% of respondents from Indiana and 98% across NCI states were reported to have a primary care doctor.

States ranged between 100% and 94%.

GRAPH 80. IN POOR HEALTH

This graph illustrates that 6% of respondents from Indiana and 4% across NCI states were reported to be in poor health.

States ranged between 7% and 2%.
This graph illustrates that 91% of respondents from Indiana and 89% across NCI states were reported to have had a physical exam in the past year.

States ranged between 97% and 63%.

This graph illustrates that 86% of respondents from Indiana and 80% across NCI states were reported to have had a dental exam in the past year.

States ranged between 97% and 62%.
This graph illustrates that 42% of respondents from Indiana and 57% across NCI states were reported to have had an eye exam or vision screening in the past year.

States ranged between 80% and 41%.

This graph illustrates that 40% of respondents from Indiana and 56% across NCI states were reported to have had a hearing test in the past five years.

States ranged between 94% and 30%.
This graph illustrates that among female respondents, 61% from Indiana and 68% across NCI states were reported to have had a pap test in the past three years.

States ranged between 87% and 32%.

This graph illustrates that among female respondents age 40 and over, 63% from Indiana and 74% across NCI states were reported to have had a mammogram in the past two years.

States ranged between 93% and 37%.
This graph illustrates that among male respondents age 50 and older, 41% from Indiana and 47% across NCI states were reported to have had a PSA test in the past year.

States ranged between 74% and 21%.

This graph illustrates that among respondents age 50 and older, 16% from Indiana and 22% across NCI states were reported to have had a colorectal cancer screening in the past year.

States ranged between 40% and 10%.
This graph illustrates that 63% of respondents from Indiana and 76% across NCI states were reported to have had a flu vaccine in the past year.

This graph illustrates that 94% of respondents from Indiana and 92% across NCI states reported that they have someone to go to for help if they ever feel afraid.

States ranged between 97% and 84%.
Summary

Recommendations/best practices for interpreting results:

- The NCI State Report allows the state to compare its own results against the average across all NCI states reporting for that particular year.
- The NCI State Report will be generated on an annual basis, enabling states to track system-level changes in performance and outcomes over time as well as in relation to the average across all NCI states.

Cautions:

- All the data presented in this report are “raw” data, meaning no statistical testing was performed. For individual state-to-state comparisons, please refer to the 2012-13 NCI Adult Consumer Survey Report, which is posted on the NCI website (http://www.nationalcoreindicators.org).
- A few of these charts show results for questions that had a small number of survey responses (e.g., questions on self-directed supports). To locate the n's (number of responses) for each question, please review the aforementioned 2012-13 NCI Adult Consumer Survey Report.

To review additional NCI reports, visit http://www.nationalcoreindicators.org.
