

3405.10.20 PRORATED BUDGET METHOD

The Prorated budget method distributes an income over the period associated with the income or expense. Educational income **and annual payments from an annuity are** common examples of income which is often calculated using this frequency and budget method (see IHCPPM 2810.40.00 and 3430.00.00). IEDSS automatically calculates monthly and annual income/expenses based on the frequency and amount.

For information about the 13th PERF check, see 3405.10.30.
