PLASTICS CAN

Lower Emissions & Drive Circularity

Plastic offers strength and protection that we all rely on every day to stay safe and healthy. Our commitment to enhancing its circularity is critical to leveraging these benefits. We must demonstrate a responsible use-and reuse-of plastics in our transition to a net-zero economy by 2050. By continuously studying substrate innovation, we unlock the incredible potential of giving natural resources multiple lives with recycled content and renewable materials.

PLASTIC PACKAGING HAS LOWER OVERALL ENVIRONMENTAL IMPACT THAN OTHER PACKAGING ALTERNATIVES*
