[Health department phone number]

Date risk assessment completed: \_\_\_\_\_

Dust and soil samples take 2-3 weeks to get results back from the lab. The risk assessment report is completed within 5 business days of receiving lab results. The report will be sent directly to you and the owner of the property (if you are renting) via mail/e-mail.

**Lead hazards identified via visual assessment and XRF analysis:**

	Door	Door Frame/Casing	Wall	Window	Baseboard	Floor	Ceiling	Other

**Current recommendations (until report is finalized):**

- Complete and submit Healthy Homes Resource for abatement grant funding
- Vacuum and wet cleaning (see cleaning handout for guidance)

**After you receive the report, next steps:**

- If lead hazards are identified on the report, work with a certified contractor to remediate the hazards.
- Familiarize yourself with the occupant protection plan that the contractor prepares. If you notice that the contractor is not performing work safely, you can make a complaint with Lead & Healthy Homes for us to investigate.
- If you have any questions or concerns about next steps, please contact either me or Lead & Healthy Homes via the contact information provided above.
