HEALTH.**

# Message from the Administrator

---

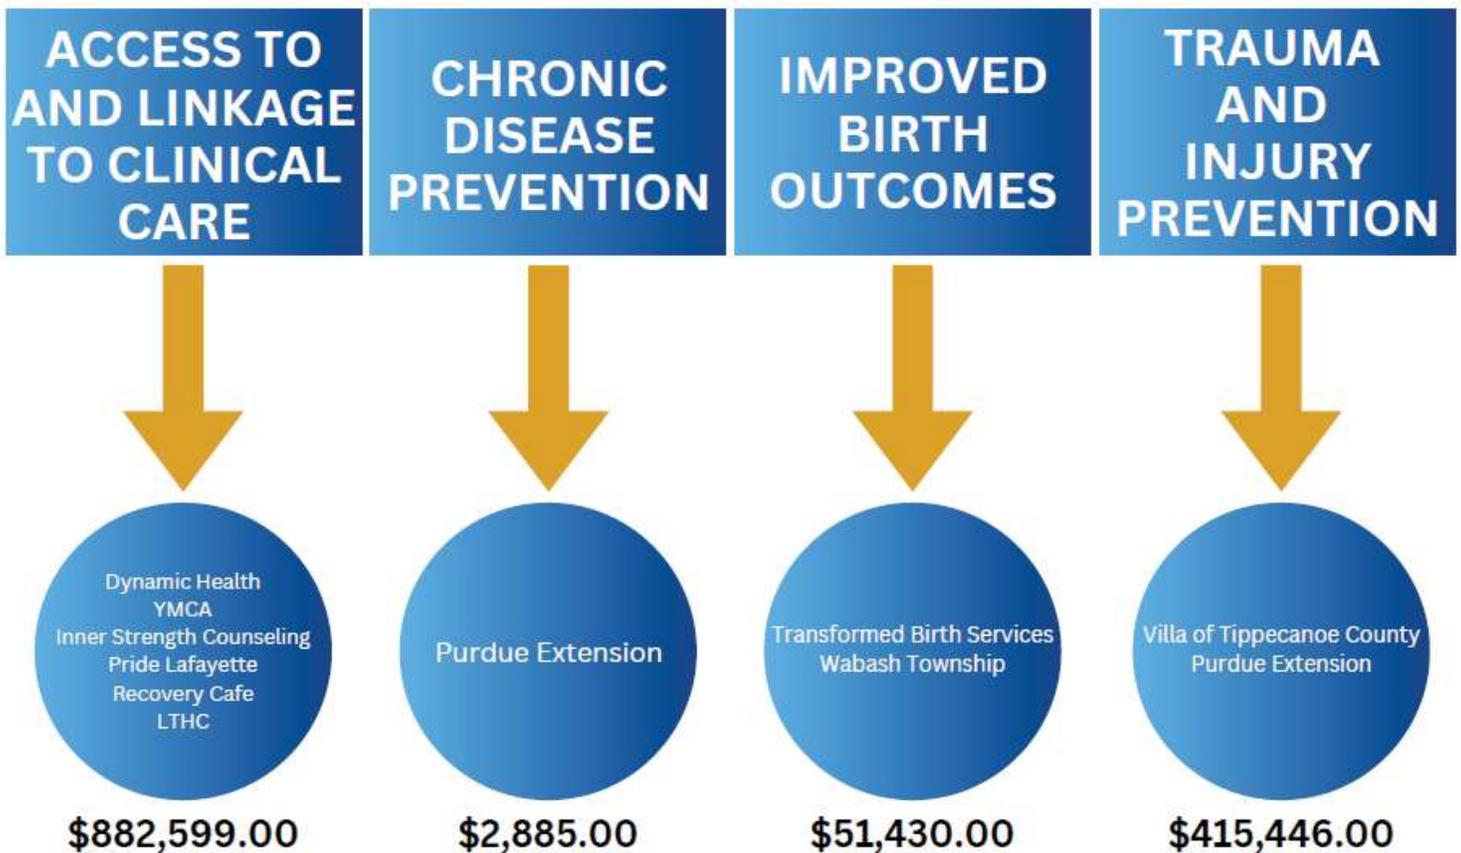

In 2024, the Tippecanoe County Health Department underwent significant transitions. I became the administrator in April, and during this period, many of our staff members took on new roles and responsibilities. In fact, six out of the eight division heads in 2024 were new to their leadership positions, all of whom were promoted from within the department.

Thanks to the initial funding from Health First Indiana, we were able to expand and strengthen our department. This funding allowed us to create new roles, including a school liaison, harm reduction site manager, disease intervention specialist coordinator, fetal and infant mortality project coordinator, a public health nurse focused on vaccines, and an outreach specialist dedicated to suicide and overdose prevention. These positions have played a crucial role in launching sustainable programs, such as CPR certification courses at schools and educational sessions about the dangers of vaping. We also house West Central's Fetal and Infant Mortality Review Director, who has expanded case reviews to include surrounding counties and introduced additional preventive measures. These efforts are essential in working toward our goal of reducing the percentage of expectant mothers who do not receive early prenatal care, aiming to decrease that rate from 25% to 22% by 2027.

At the same time, our suicide and overdose prevention team are leading initiatives to reduce suicide rates, with the target of lowering deaths from 23 in 2022 to 20 by 2027. Our Harm Reduction Program Manager has worked to ensure access to life-saving resources, including sterile syringes, naloxone, educational materials, and support for food insecurity, all while helping reduce the spread of infectious diseases. With the site manager in place, we have seen a significant reduction in hepatitis C cases in the county, from 66% to 53% in just one year. Over 1,500 community members have benefitted from services like peer recovery support, clothing access, wound care, food assistance, and Narcan training and distribution. The Disease Intervention Coordinator oversees efforts to prevent, identify, and treat sexually transmitted infections (STIs) across District 4, which includes 10 other counties. This position also fosters partnerships with a major university and is integral in outreach, provider education, testing, counseling, and disease management, all aimed at minimizing transmission risks in the community.

# HEALTH FIRST TIPPECANOE'S REQUEST FOR PROGRAMMING (HFT-RFP)

The Health Department established a reimbursable grant application process through Health First Tippecanoe's Request for Programming (HFT-RFP). This initiative has led to partnerships with more than 10 local agencies, helping ensure the long-term sustainability of core services that align with Health First Indiana's requirements. Moreover, this approach generates valuable data to track our progress and assess whether we are meeting our key performance indicator (KPI) metrics. None of these achievements or ongoing efforts would have been possible without the generous support and collaboration of Health First Indiana. Their funding has been essential in making these impactful programs a reality.

# FOODS

The foods division is responsible for the permitting and inspecting of all food service establishments, retail, mobile food units, farmer's markets, and temporary events located in Tippecanoe County. Our team of Environmental Health Specialists conducts regulatory on-site inspections to prevent foodborne illness. The foods division has observed enormous growth in the number of permitted establishments and temporary events in the past year and has permitted 44 new facilities. Routine inspections are conducted two times per year and possibly more for complaints, follow-up, fires, or other investigations.

In 2024, there were approximately 1,867 inspections conducted. See pie chart for break down by inspection type.

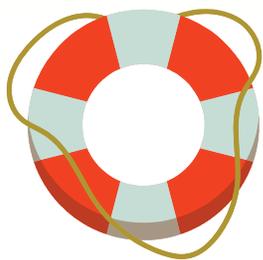

In 2024, the foods division added a new full-time Environmental Health Specialist position to help accommodate the growth in Tippecanoe County.

2024 Food Inspections

## 2025 Goals:

- To continue to conduct food safety educational trainings with operators and staff for the diverse population in Tippecanoe County.
- To adopt the Retail Food Establishment, 410 IAC 7-26 as the updated Indiana Food Code based on the 2022 FDA Model Code and fully train staff on the updates, as well as host educational sessions for operators.

# POOLS

The pools division regulates public and semi-public pools in Tippecanoe County. Public pools are available to use by any member of the public and include water parks and splash pads; semi-public pools are available to select members of the public most often found in schools, hotels, apartments, neighborhood HOAs, gyms, or membership clubs.

Pools that are open year-round receive two inspections annually (including hotels, gyms, and schools). Seasonal pools are open a set number of months of the year (typically Memorial Day through Labor Day) and receive an opening inspection at the beginning of the season. This can include campgrounds, water parks, and community pools. There were 79 routine inspections, 21 seasonal pool openings, 6 new establishment openings, 48 follow-ups, 4 compliance, and 1 complaint inspection conducted in 2024.

Type of Inspection	Count
Routine	79
Seasonal Openings	21
New Establishment Openings	6
Follow-Ups	48
Compliance	4
Complaint	1

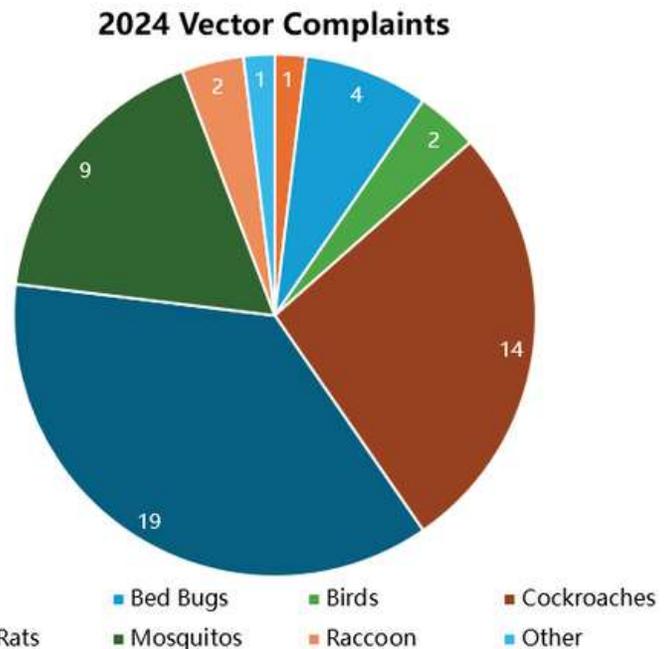

## 2025 Goals:

- Have an additional Environmental Health Specialist achieve the Certified Pool Operator Certificate for a total of 3 staff members.
- Conduct at least one on-site seasonal pool inspection.

# ENVIRONMENTAL

The Environmental Division is dedicated to safeguarding public environmental health throughout Tippecanoe County. This includes a wide range of responsibilities, such as lead testing, septic system management, mosquito and pest control, housing inspections, air quality monitoring, and wastewater disposal.

**On-site sewage disposal system:** The Environmental Division is responsible for the inspection and permitting of residential and commercial on-site sewage disposal systems within the county, specifically for properties that do not have access to municipal utilities. A Health Department permit is required before starting construction on new or repaired septic systems, with an inspection conducted upon completion to ensure compliance with regulations. In 2024, a total of 132 on-site sewage disposal system permits were issued in the county. Of these, 70 were for new septic system installations, while 44 were for repairs or replacements of existing systems.

**Rabies Testing:** In 2024, the Health Department submitted a record of 14 bats for rabies testing. All 14 samples returned negative results, offering reassurance to the community that none of the tested animals were infected. This outcome underscores the ongoing importance of proactive testing and vigilance in safeguarding public health and safety.

## 2025 Goals:

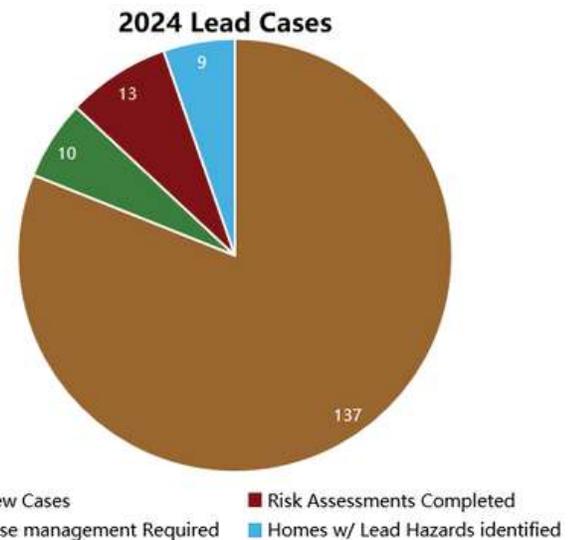

- One of the key priorities of the Health Department is to complete the finalization of the County's On-Site Sewage System (OSS) Ordinance.
- The Health Department is actively working to add an additional EHS Category 8 certified mosquito management professional to our team.

# LEAD

Lead case management is defined as the process of providing, overseeing, and coordinating services for an elevated blood lead level. A child enters case management when they have had a confirmed blood lead level greater than 5 mcg/dL. A blood lead level is confirmed two ways; 1. By venous blood testing or 2. Two capillary blood tests within a specified timeframe. Our public health nurse and environmentalist work closely with families, healthcare providers, and homeowners to ensure blood lead testing follow-ups, nutritional education, and home hazard reduction plans.

In 2024, the Tippecanoe County Health Department maintained its dedication to reducing childhood lead exposure. 137 New lead cases were opened in 2024. Of the 137 new cases only 10 required case management including a risk assessment from our licensed lead risk assessor. There were some cases that required a risk assessment on more than 1 house. Case management includes a home visit by our lead case manager/public health nurse where they conduct a nutritional and developmental screening. They also provide education to the parent or caregiver regarding tips on how to reduce lead levels through good nutrition, hand hygiene and other recommended practices. Our team conducted 13 risk assessments, identifying 9 homes with lead-based paint hazards. The risk assessment is performed by a licensed lead risk assessor and includes a combination of XRF testing, wipe sampling (for lead dust), and soil testing to identify lead exposure.

## 2025 Goals:

- Increase lead testing and education in the community by offering lead testing and/or education at various community events.
- Increase compliance of confirmatory testing through provider and parental education.
- Enhance collaboration and communication with landlords to prevent repeat lead-based paint exposure after remediation has been completed.
- Continue residential lead-based paint education including cleaning techniques and stabilization through social media.

# COMMUNICABLE DISEASES

The Tippecanoe County Health Department works to conduct surveillance, investigations and follow-ups on all reportable diseases and outbreaks. Through communicable disease surveillance, we can track disease trends within our community and implement prevention measures to prevent further spread of disease. Some prevention measures include prophylactic medications and immunizations. The communicable disease division also provides community education and referrals for treatment of certain diseases such as Hepatitis C.

During 2024, a decrease in Strep pneumoniae, invasive infections was seen. Strep pneumoniae, invasive disease can be prevention through vaccination and good hygiene like handwashing and covering coughs and sneezes. In October 2024, it was announced that people could get the pneumonia vaccine starting at age 50 instead of 65. This will further aid in the prevention of strep pneumoniae, invasive infections.

Note: This data includes cases deemed probable and/or confirmed. For patient privacy, if the total number of cases investigated are less than 5, it is reported as <5.

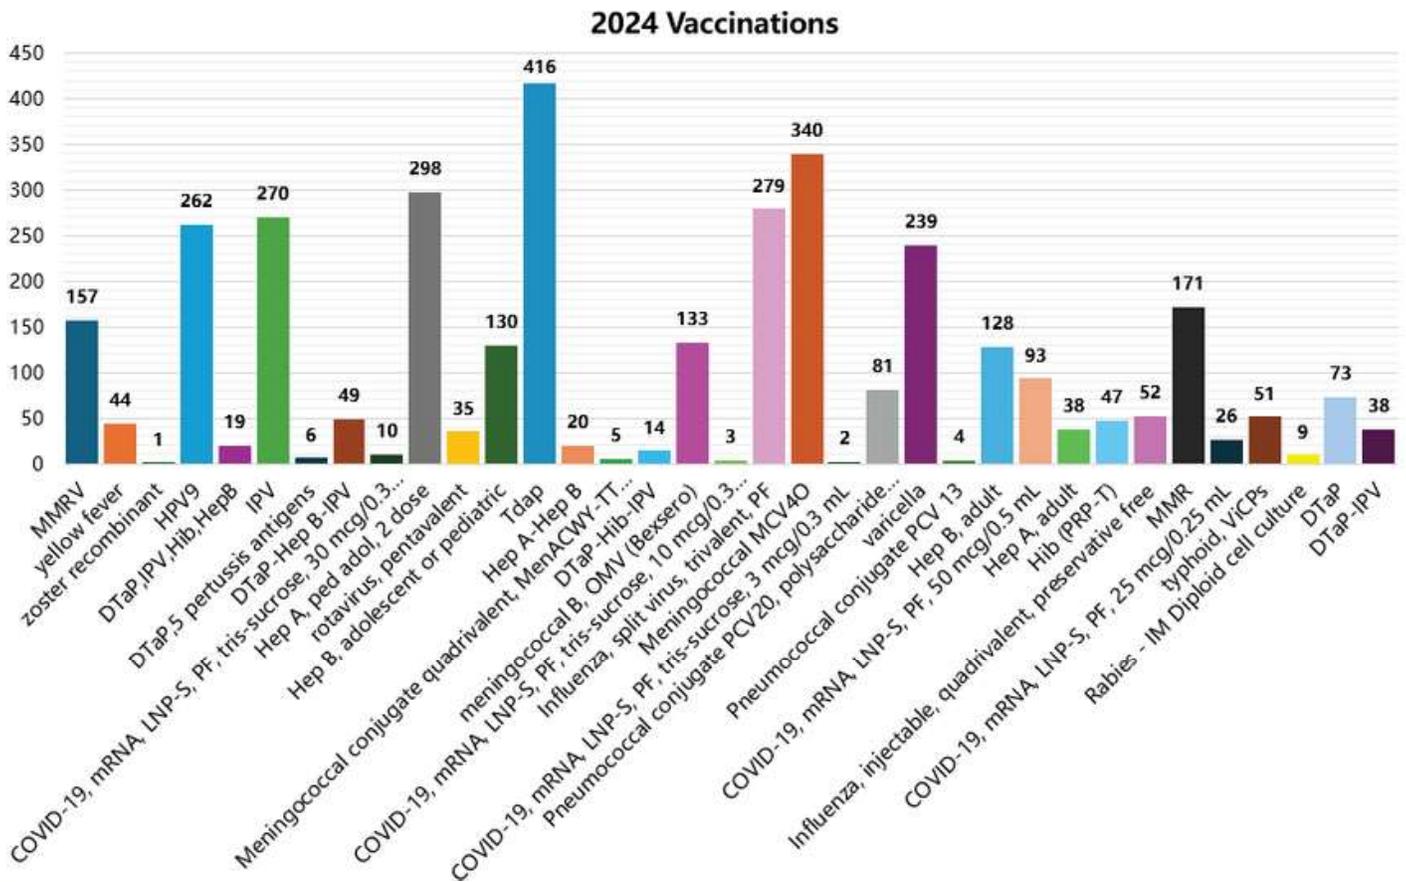

Condition	Case Count
2019 Clinical Novel Coronavirus	8
2019 Novel Coronavirus	2458
Animal Bites	213
Campylobacteriosis	25
Candida auris, colonization/screening	<5
Carbapenemase-producing organisms (CPO), clinical	<5
Coccidioidomycosis	<5
Cryptosporiasis	11
Cyclosporiasis	<5
Dengue	<5
Ehrlichiosis, chaffeensis	<5
Giardiasis	8
Haemophilus influenzae, invasive	<5
Hepatitis A, acute	<5
Hepatitis B Virus Infection, chronic	14
Hepatitis B, acute	<5
Hepatitis C Virus Infection, past or present	43
Hepatitis C, acute	5
Histoplasmosis	<5
Influenza-Associated Death	<5
Legionellosis	<5
Lyme Disease	10
Mumps	<5
Pertussis	<5
Reinfection of Hepatitis C Virus	<5
Salmonellosis, excluding S. thypi and S. paratyphi	19
Shiga toxin-producing Escherichia coli (STEC)	7
Shigellosis	<5
Strep pneumoniae, invasive	15
Streptococcal disease, invasive, Group A	9
Typhoid Fever (s. enteritica typhil)	<5
Varicella (Chickenpox)	5
Vibriosis (non-cholera Vibrio species infections)	<5
Yersiniosis	<5

## 2025 Goals:

- Promote preventative measures such as good hygiene practices, handwashing and vaccination through social media to reduce transmission of communicable diseases.
- Collaborate with healthcare providers in our area to provide education to their staff regarding communicable disease testing, reporting, and treatment.

# IMMUNIZATIONS

Tippecanoe County Health Department (TCHD) immunizes people of all ages in the community. The goal of the immunization program is to eliminate vaccine-preventable diseases by providing low-cost vaccines and providing education on the importance of vaccines. TCHD offers free or reduced-cost immunizations to children and adults through an Indiana Department of Health program; this program reduces the burden of cost to the patient. TCHD nurses work closely with the local school corporations to ensure students have the required immunizations. In 2024, TCHD held a late night at least monthly to accommodate patients and off-site clinics to reduce barriers to not vaccinating.

## 2025 Goals:

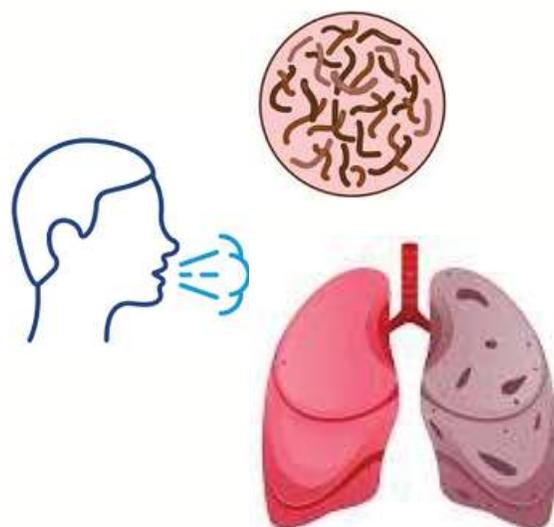

- Increase the vaccination rate for children aged 6-35 months through increased access, education, and collaboration with local providers.
- Obtain Vaxcare to enhance access to vaccines.
- Change to an electronic health record system.

# TUBERCULOSIS

Tuberculosis is a bacterial infection caused by *Mycobacterium tuberculosis*. This infection most commonly affects the lungs but can manifest in other parts of the body. The health department has continued to work with local providers, hospitals, urgent care, and Purdue University facilities to highlight the importance of reporting this communicable disease. Preventing the spread of tuberculosis requires treating both active and latent cases reported.

There are two types of TB: active and latent. An active case is when a patient is experiencing symptoms of TB and is contagious. A latent patient has the TB infection but does not have symptoms and is not contagious. Latent cases have the potential to become active cases. Those with active TB are required to undergo treatment, but latent patients can choose if they want treated. Treatment of tuberculosis consists of completing DOT (Direct Observed Therapy) and required medication. In 2024 the county had <5 active cases of TB and <5 suspected cases.

The Tippecanoe County Health Department offers both blood and skin testing. A skin test involves a small amount of tuberculin fluid injected into the upper arm and is read 48-72 hours later. If a patient tests positive, they may be referred for a chest x-ray to determine if their case is active or latent.

## 2025 Goals:

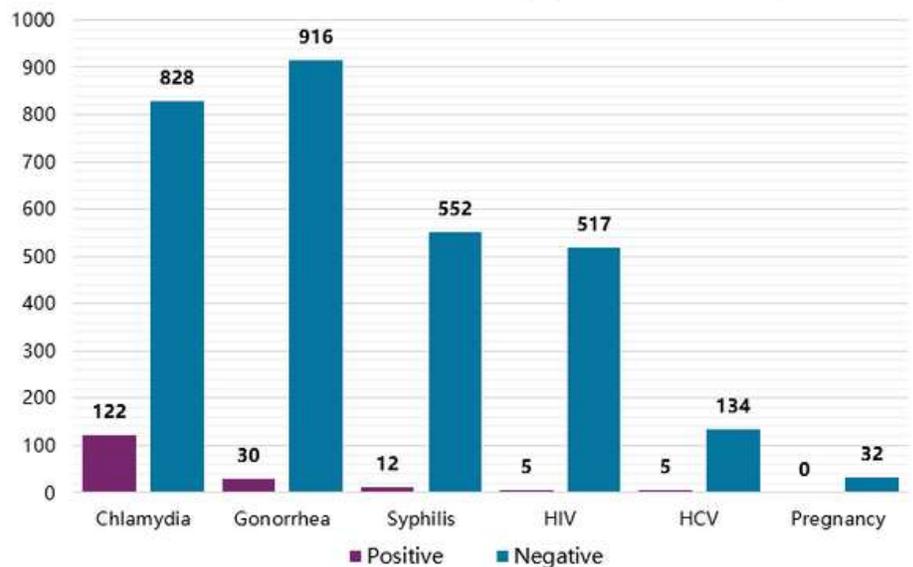

- Increase immigration-related Tuberculosis tests.
- Continue our partnership with PUSH to aid in diagnosis and treatment of Purdue students.

# SEXUALLY TRANSMITTED INFECTIONS (STI)

In 2024, our program made significant progress in STI prevention, access to care, and public health outcomes. We introduced the Disease Intervention Specialist (DIS) Clinic and Outreach Coordinator role, which helped manage clinic and outreach efforts, and trained all DIS staff to Level II status for improved STI case management. We participated in seven community events, offering free STI testing, education, and prevention, while also conducting five targeted outreach events for at-risk groups. We adopted DoxyPEP as a preventive measure for high-risk individuals and expanded our STI services campaign through radio ads, social media, and website updates. Additionally, we enhanced our STI treatment and care processes to ensure more efficient, patient-centered services. These initiatives greatly improved our ability to prevent, treat, and educate the public on STIs, reinforcing our commitment to community health.

2024 STI Test Results in Tippecanoe County

## 2025 Goals:

- **Increase STI Testing and Early Detection:** Aim to increase the number of individuals tested for STIs, with a focus on high-risk populations, through expanded community outreach, mobile testing clinics, and improved access to confidential testing services. This goal will help identify cases earlier and reduce the spread of infections.
- **Enhance Education and Prevention Outreach:** Develop and implement a comprehensive STI prevention education campaign that reaches target populations. This would include school-based programs, social media outreach, and partnerships with local organizations, to raise awareness about safe sex practices, regular testing, and other prevention strategies ultimately reducing the incidence of new infections.

# FETAL & INFANT MORTALITY REVIEW (FIMR)

The West Central Indiana Fetal & Infant Mortality Review (WCI-FIMR) Program is a multidisciplinary process for reviewing stillbirths (20 weeks gestation or greater) and infant deaths (up to one year). The goal is to identify gaps in service and opportunities for prevention of future deaths.

The cases reviewed in 2024 consisted of fetal and infant deaths of Tippecanoe County residents that occurred in 2023, except for congenital anomalies and pending investigations. The Case Review Team findings and recommendations are presented to the Community Action Team (CAT) on an annual basis. They assist the FIMR director with implementing recommendations in healthcare and community settings. The FIMR team reviewed 16 Tippecanoe cases. Maternal interviews were successfully conducted for 5 (31%) cases and their input was included in case

summaries. The team served over 100 families this year at our events. These families received information about local resources, safe sleep, Count the Kicks, post-birth warning signs, car seat safety, smoking cessation & preconception health. The Community Baby Shower is our biggest event, but we are proud of all of our outreach in 2024 including:

- Quarterly Educational Social Media Posts
- FIMR Round Table
- Slice of Safe Sleep
- Women's Health Fair
- Maternal Child Health Resource Guide
- Safe Sleep Commercials
- Count the Kicks Billboards
- Bereavement Resource Guide
- Resource Referral Guide for Providers

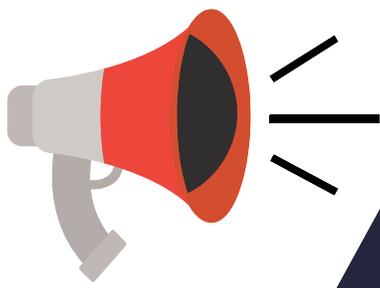

The March of Dimes reports that doulas can help reduce racial disparities in maternal and infant mortality. Doulas offer childbirth education and support at delivery and postpartum. To address disparities and social needs gaps we started the CommUNITY Pregnancy Support Group in collaboration with the non-profit doula team, Transformed Birth Services, and Bauer Family Resources. St. Thomas Aquinas Racial Equity & Justice Ministry also provides transportation and childcare. Resources, education, and building community are the focus of the group. The Health Department prioritized a portion of their Health First Indiana funds to cover the cost of doula services for anyone who participates. Since January, we served 31 families in the support group and 14 opted to receive free doula services. We now offer a prenatal vitamin program at Riggs Community Health Center and Bravely Women's Health. Anyone with a positive pregnancy test is given a free bottle of vitamins from the Health Department. Since July, we have provided over 250 bottles! In 2021, we started promoting Count the Kicks, an app for monitoring fetal movement, which can be an early sign of fetal distress. At the time, there were no users in Tippecanoe County. Now there are over 200 app users! This summer, the WCI-FIMR Director was invited to speak as a keynote panelist at the Indiana Department of Health's Labor of Love Summit about the successful work of the team.

## 2025 Goals:

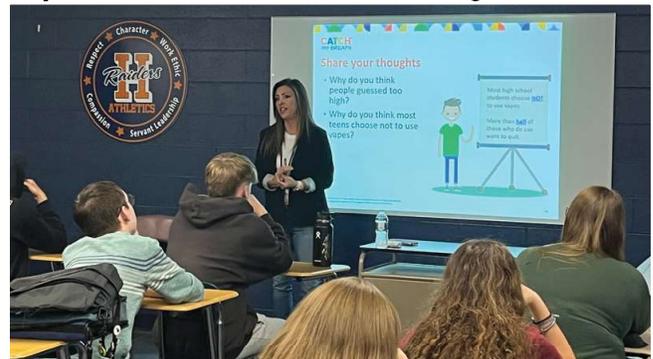

- Maintain/update current initiatives that improve maternal and child health resource mapping and referrals by the end of the second quarter of 2025.
- Maintain current community education initiatives and expand them to include topics recommended during 2024 case reviews by the end of the third quarter of 2025.
- Maintain and expand current initiatives that help address racial disparities in fetal, infant, and maternal health throughout 2025.
- Host or participate in at least 3 events aimed at reducing fetal, infant, and/or maternal mortality in Tippecanoe County by the end of 2025.
- Collaborate with local healthcare systems to address at least one of the recommendations from 2024 case reviews by the end of 2025.

# EMERGENCY PREPAREDNESS

The mission of the Division of Emergency Preparedness is to ensure the health and welfare of Tippecanoe County residents before, during, and after a public health emergency and other all hazards emergencies with public health implications.

**School Liaison:** The school liaison program was started in 2022 with the goal of meeting the health needs of schools in Tippecanoe County. Our two school liaisons work with 42 schools, including public and private schools. The school liaisons work directly with school nurses to identify any health and education needs for students or staff. This can include hygiene kits, education, nurse office supplies, AEDs, Stop the Bleed kits, etc. Throughout 2024 education opportunities included CPR, Stop the Bleed, First Aid, and Catch my Breath. The Catch My Breath education program was taught 11 times and Hidden in Plain Site trailer was utilized at 6 different events. We were able to partner with Lafayette Jeff High School Special Education program to provide equipment for the Unified Bocce Ball Team and the Adaptive PE class. The school liaison team in partnership with the nursing division were able to host multiple school immunization clinics. Also in 2024, the school liaison team held 2 immunization clinics at a local daycare. Hosting on site immunization clinics increases accessibility for families. A large focus of the school liaison team is providing schools with health-related items. Both hygiene and feminine hygiene kits are provided to the schools year-round.

## 2025 Goals:

- Work with Emergency Management to update county emergency preparedness plans and develop an Active Shooter Plan for the health department.
- Continue outreach with schools, increase vaccination rates, do outreach at Kindergarten Round up, continue education classes, and continue to promote the Hidden in Plain Site trailer.
- Host or participate in at least 2 off-site clinics for area students.

# SUICIDE OVERDOSE FATALITY REVIEW TEAM

**Suicide Overdose Fatality Review Team:** The Suicide Overdose Fatality Review Team (SOFRT) reviews fatal drug overdoses and suicides in Tippecanoe County. The review team is a group of local leaders from various organizations that have knowledge or information pertaining to fatal drug overdoses and suicides in our county. Key members include individuals from the health department, county Coroners office, mental health professionals, physicians, pharmacists, law enforcement, etc. In 2024, the team reviewed 26 fatal overdoses and 14 suicides. In 2024 the Suicide Overdose Fatality Community Action Team was formed. This team consists of individuals from our fatality review team and other community partners who are interested in and able to actively implement community specific actions that will lead to a reduction in fatal overdoses and suicide deaths. The goal of the Community action team is to take the recommendations from the fatality review team and review them to identify priorities and specific needs in the community. The Community Action Team will work together to create community initiatives aimed at preventing future suicides and overdose deaths. The team will work to develop outreach programs, events, educational materials, ETC.

## 2025 Goals:

- Hold first meeting of the Suicide Overdose Fatality Community Action Team in the first quarter of 2025.
- Continue monthly fatality review team meetings. Team will review 4 cases a month and create recommendations to pass on to the community action team.
- Host or participate in at least 3 events aimed at reducing the stigma associated with mental health.

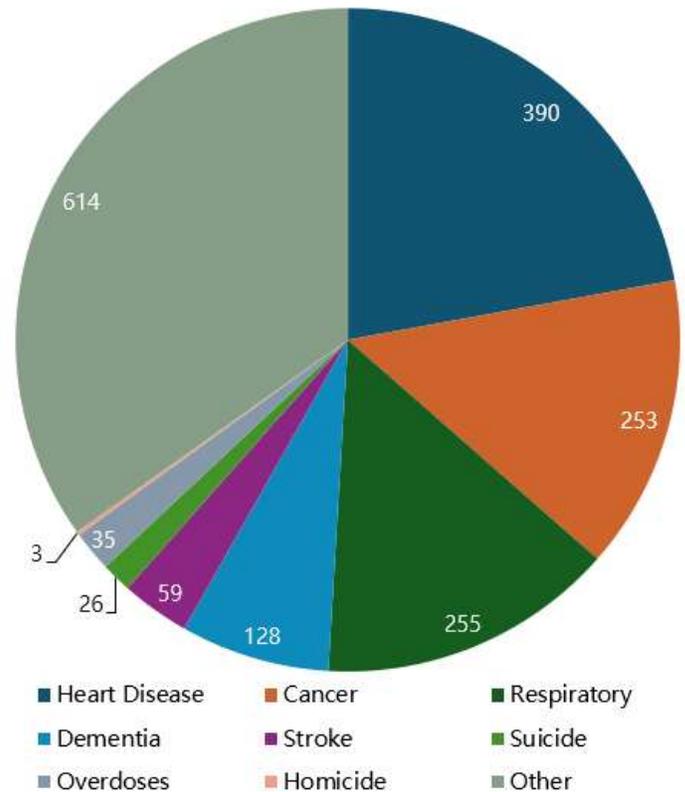

# VITAL RECORDS

The Vital Records Division is tasked with providing essential birth and death records for Tippecanoe County, including birth certificates, death certificates, paternity affidavits, and genealogical research services. In 2024, the division issued a total of 10,390 birth certificates and 13,502 death certificates to the public.

In 2024, we successfully implemented DocuWare, an electronic document management system, to streamline our recordkeeping process. This system allows us to scan and digitally store all records, greatly enhancing our ability to manage and organize documents. With DocuWare in place, we have eliminated the need for physical files, which can take up valuable space and are vulnerable to being lost or damaged.

Additionally, in 2024, we had the invaluable opportunity to conduct on-site training with the IU Health Mother/Baby Unit. This collaborative experience proved to be incredibly beneficial for both our team and theirs. By working directly with their staff, we ensured they were fully prepared to utilize the new systems and processes we had implemented. Being on-site allowed us to provide immediate support, answer questions in real-time, and tailor the training materials to better align with their workflow.

2024 Causes of Death

## 2025 Goals:

- Replace Chronica with a new issuance vendor.
- Begin issuing all county birth and death certificates
- Scan and digitize older archived records into DocuWare for improved organization and accessibility.

# GATEWAY TO HOPE

In 2024, Gateway to Hope, the syringe services program (SSP) at the Tippecanoe County Health Department, made significant strides in harm reduction and community support. A total of 1,505 visits were recorded, with 1,254 unique participants served, including 262 new individuals accessing services for the first time. The program successfully distributed 48,959 syringes while achieving an impressive total return rate of 166.61%, demonstrating strong participant engagement in safe disposal practices. Additionally, 487 doses of naloxone were distributed, contributing to 61 reported overdose reversals.

Services Summary	Count
Total Visits	1505
Syringes supplied by SSP	48959
Syringes Returned to SSP	43923
Participant Syringe Exchange Rate	89.71%
Community Syringe Returns to SSP	37650
Total of all Syringes Returned to SSP	81573
Total Syringe Returned Rate	166.61%
Naloxone Doses Provided	487
Reportedly Used Naloxone Doses	61
Participants Receiving HIV Counseling in Past 3 Months	130
Participants Receiving HCV Counseling in Past 3 Months	133
Number of Visits Conducted Via Fixed Location	1425
Number of Visits Conducted Via Mobile Unit	19

**Note:** Data contained in this report is maintained by individual syringe service providers. HIV and HCV testing are not conducted by syringe service programs, but rather by HIV and HCV testing programs aligned with syringe service programs. The number of HIV and HCV tests performed by these programs are reported separately.

Beyond harm reduction, the program connected participants to essential services, with clothing resources (601 referrals), peer recovery support (496 referrals), and food assistance (289 referrals) being the top needs addressed. Mobile outreach also played a role in expanding access, with 19 off-site visits recorded. These successes reflect the program's commitment to public health, safety, and community well-being.

## 2025 Goals:

- **Expand Community Partnerships for Greater Impact:** Building on our success, we aim to strengthen collaborations with at least 3 additional local medical providers, hospitals, EMS, and pharmacies to enhance peer support, improve substance use prevention resources, and install public Narcan boxes in key areas, including West Lafayette, Dayton, Clarks Hill, and Montmorenci. This initiative will increase access to life-saving interventions and integrate harm reduction strategies more effectively within healthcare and emergency response networks.
- **Increase Mobile Outreach and Access to Services:** While the majority of visits occurred at our fixed location in 2024, only 19 visits were conducted via mobile outreach. In 2025, we plan to expand mobile unit services to reach more underserved areas and individuals with limited access to transportation. By increasing mobile outreach events and strategically placing service points, we aim to bridge gaps in care and reduce barriers to harm reduction and health services.
- **Enhance Naloxone Training and Distribution:** With 487 doses of naloxone distributed in 2024 and 61 reported uses, we recognize the need for expanded training efforts. In 2025, we will focus on increasing naloxone education and distribution, targeting at-risk individuals, community organizations, and local businesses. By offering more frequent training sessions and incorporating education into outreach efforts, we aim to ensure that more community members are equipped to respond to overdoses and save lives.
