

## **Industrial Laboratories**

### **Executive Summary**

The Industrial Laboratories Company, Inc. was founded in 1945. Originally established as an in-house microbiology company for a baked goods factory, verifying product quality and safety. The laboratory was sold off from the parent company, and started expanding into the field of Analytical Chemistry to complement the laboratory's services in food safety and started testing products for nutritional labeling and other claims. In 1953, the State of Colorado, interested in opening racetracks, approached the company and asked if the lab could test racehorses and greyhounds for banned substances, this was the start of our banned substances career. Over time the lab began to expand and offer its services to other racing jurisdictions. Industrial Laboratories is now one of the leading laboratory authorities in horse racing and provides banned substance testing services to other jurisdictions both across the United States and internationally.

Industrial Labs is a family owned and operated business that employs hardworking individuals. The lab has a single location in its new 30,000 square foot home in Denver Colorado. IL provides quality, cost-effective, cutting-edge analysis coupled with outstanding customer service. The lab believes firmly in the quality of its analytical science and helped lead the initiative for third party accreditation. Industrial Laboratories was one of the first labs in industry, accredited to ISO 17025 through American Association of Laboratory Accreditation (A2LA) and to the Racing Medication Testing Consortium's (RMTC) Laboratory Accreditation Program, as well.

Industrial Labs is committed to advancing the performance of the animal drug testing industry. In 2012, Industrial Labs, while working with racing jurisdictions who suspected a rogue doping substance, the lab discovered the use of dermorphin. Additionally in 2024, the lab identified another new compound to horse racing ABD-fubinaca. To advance the racehorse testing industry and help all jurisdictions screen for and eradicate the use this banned substance, Industrial Labs released its method to the racehorse testing industry.

Industrial Laboratories has been exceptionally grateful for the working relationship that it has been able to establish with the Indiana Horse Racing Commission. We are excited to have the opportunity to, potentially, continue working with the Racing Commission to help Indiana facilitate an exemplary horse racing program. With Industrial laboratories' cutting edge technology, cost effective, technically advanced, quality oriented laboratory analysis, paired with excellent customer service, Industrial Laboratories is pleased to provide the State of Indiana Horse Racing Commission with a best in class drug screening program.
