What's included in this module:

The Detainers and Holds module allows staff to log requests from other agencies that wish to gain custody of an offender upon release. It contains three main parts: the Detainer entry process, Detainer Dashboard, and Detainer Summary.

What's in it for me?

- More information available
- One system for all of my work
- Easily accessible historical information

Associated Roles:

Parole Agent   Classification Specialist   Release Coordinator

Module: Detainers and Holds

Key Changes?

Instead of going to each individual offender, the Detainer Dashboard is a single screen that will allow staff to search for detainers for offenders in their caseload by filtering by Facility, Detainer Type, Detainer Status, and Days to Release.

DELTA will allow for uploads of pertinent documents related to the detainer.

When entering a new Detainer, DELTA will allow for more information to be displayed to staff concerning contacts. Staff will be able to enter name, badge number, email, and phone number. Documents related to the contact can also be uploaded.

DELTA will allow staff to denote specific aliases used by an offender when entering a new detainer.

The Detainer Summary will allow staff to see the history of detainers for an offender on one screen instead of going to each individual detainer.

What will be the same?

DELTA will still have Detainer Types and Subtypes.

Agency information will still be captured.
