

What's included in this module:

The Parole module allows for the ability to track parole status, including parole violations and revocations. The module can also be updated or configured in accordance with Indiana law changes, IDOC procedure/policy changes or any federal legislation impacting parole procedures.

What's in it for me?

One system for all of my work

Less manual data entry

Easily accessible & searchable information

Associated Roles:

Parole Agent

Parole Supervisor

IPB Member

Module: Parole

Key Changes?

Transmittals will be completed in DELTA, rather than on paper. Parole Agents can complete transmittals, and Supervisors can then approve and submit them directly to the Parole Board Supervisors. Staff can also see all current and past transmittals.

DELTA will automatically calculate Parole End Dates (Parole Terms), with the option for a supervisor to override. DELTA will also automatically discharge all sentences as they reach their PED, except on the longest term.

Parole staff will be able to transfer entire caseloads, including approved placements, in one action in DELTA.

DELTA will automatically notify Supervised release when an offender is released to parole, transferred to another agent, or discharged.

Parole violation warrants for adults and juveniles will be requested and issued in DELTA. Central Warrants will continue to enter them into IDACS.

DELTA will have a parole specific banner at the top of each screen which will allow staff to discontinue the use of word document templates to copy and paste.

What will be the same?

The Parole Intake Checklist will consist of the same documents but will be completed in DELTA.

IRAS & IYAS scores will still be used when creating case plans. The scores will be transferred from INcite to DELTA automatically.

Parole Service Referrals will remain the same, except they will now be requested through DELTA instead of SharePoint.

The DOC Assist process will remain the same, but requests and approvals will take place in DELTA within the placement screen.
