

What's included in this module:

The DELTA Warrant module allows staff to issue warrants against offenders. The module consists of a warrant entry and approval process, warrant dashboard, and a warrant summary screen. This module will also be set up to interface directly with the Parole Board module.

What's in it for me?

One system for all my work

Less paper-based processes

Easily accessible & trackable information

Associated Roles:

Central Warrants Unit

Escape Warrants Designee

Parole Staff

CTP Staff

Module: IDOC Warrants

Key Changes?

All Warrants will be tracked in DELTA instead of on a spreadsheet. Staff will be able to choose whether the Warrant is Escape, Parole, or CTP.

There will be a searchable Warrant Dashboard in DELTA, which will display the status of the Warrant. It will also show the type of Warrant, which will keep Warrant information more concise and searchable. It will also allow for better tracking abilities.

Once a Warrant has been entered in DELTA and appears on the Warrant Dashboard, an automatic email will be sent to the relevant stakeholders, including Central Warrants.

Once the Apprehension Notice is completed in DELTA, an automatic email notification will be sent to Central Warrants, as well as Sentence Computation, Parole, CTP, and Escape staff depending on the Warrant type.

When the Central Warrants Unit receives the Apprehension Notice, they will enter the date the Warrant was served in DELTA and close the IDOC warrant in DELTA, IDACS, and NCIC.

What will be the same?

All information and documents previously available in PATS will now be available in DELTA.

All forms in DELTA can be printed.

Transmittals will still be used for IPB warrants and will now be uploaded to DELTA.

CWU will still enter warrants in NCIC & IDACS.
