Sposeep I • RWP • Wabash, Indiana • March 19, 2019 • Page i
1.0 INTRODUCTION

Industrial Waste Management Consulting Group, LLC (IWM Consulting), on behalf of the City of Wabash, prepared a Revolving Loan Fund (RLF) Subgrant Application and associated documentation. The RLF Subgrant was accepted by the Indiana Finance Authority (IFA) Indiana Brownfields Program (IBP). Phase II Site Investigations were completed at the Site in 2013 and 2017. The 2013 Site investigation was performed by Soil and Materials Engineers, Inc. (SME) as part of a United States (U.S.) Environmental Protection Agency (EPA) Community Wide Assessment Grant awarded to the Wabash Coalition. The 2017 Site investigation was performed by IWM Consulting as part of an IFA/IBP 128(a) Response Program Assessment Grant. This work is being funded through RLF Cooperative Agreement #BF-00E48101-B for IBP Site No. 4161215.

This site-specific Remediation Work Plan (RWP) will discuss in detail the proposed remediation activities for the Abe Sposeep & Sons, Inc. I Property (Site) located at 55 West Water Street, Wabash, Indiana. A Site Location Map is presented as Figure 1.

A Phase II Environmental Site Assessment (ESA), dated July 25, 2013, was prepared by SME. The 2013 field investigation activities included two (2) hand-auger borings from soil piles in the basement of the Site building, eleven (11) soil borings advanced to a depth of 16 feet below surface grade (bsg) using hydraulic-push techniques, and seven (7) temporary groundwater monitoring wells installed in seven (7) of the eleven (11) soil boring locations. Depending on the Recognized Environmental Condition (REC) identified in the Phase I ESA, soil and/or groundwater samples were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), poly-aromatic hydrocarbons (PAHs), poly-chlorinated biphenyl (PCBs), and metals (cadmium, chromium, lead, and mercury) as part of the Phase II ESA.

Based on the results of the 2013 Phase II ESA, a Site-specific Phase II ESA scope of work (SOW) was developed and IWM Consulting completed the Site Investigation activities in 2017. A brief summary of the 2017 investigation and subsequent results is provided in the following section of this document.

All of the soil and groundwater samples collected and analyzed as part of this remediation project will be compared to the applicable Indiana Department of Environmental Management (IDEM) Remediation Closure Guide (RCG) Screening Levels.
2.0 PROJECT BACKGROUND

2.1 Project Location

The site is located at 55 West Water Street, Wabash, Wabash County, Indiana. Geographically, the Site is located in Section 14, Township 27 North, Range 6 East in Wabash County as shown on the Wabash, Indiana 7.5-minute USGS topographic quadrangle map. More specifically, the center of the Site is located at approximately 40.794755º latitude and -85.821517º longitude. The property parcel number is 85-14-14-102-044.000-009. A Site Location Map is presented as Figure 1.

2.2 Physiographic Setting

The Site is rectangular shaped and consists of 0.65 acres and is located in the south-central portion of the Wabash, Indiana, central business district. The Site is located in an urban area of Wabash in a predominantly commercial setting that is serviced by city water and sewer services. Properties in the immediate site vicinity are occupied by automobile dealerships, automobile service facilities, an automobile body shop, an insurance agent, government offices, and retail stores. No surficial waters are present on the Site. The Site vicinity slopes to the south towards the westerly flowing Wabash River, which is located approximately 1,050 feet southeast of the Site. Previous Site investigations indicate that groundwater flow direction is to the south-southeast.

2.3 Site History

The Site is rectangular shaped and consists of 0.65 acres and is improved with a three-story commercial building with a basement on the north-central portion. The remaining areas of the Site consist of a fenced storage yard, with a concrete drive and truck scale located along the east side of the building. Historical review indicates the Site has been occupied since at least 1887. The basement, first floor, and second floor of the existing building were constructed in 1890, and Sanborn fire insurance maps show the third floor of the building was added between 1896 and 1901. The Site is currently unoccupied and has reportedly been unoccupied since 2003. The most recent Site occupant was Abe Sposeep & Sons, a scrap metal processing and recycling facility, which occupied the Site from 1934 to 2003.

IWM Consulting conducted Phase II Site investigation field activities between June 15, 2017 and June 26, 2017. A Site Layout Map depicting the 2017 soil and/or groundwater sampling locations is presented as Figure 2. During the course of the Phase II investigation, the following investigative activities were completed and subsequent results were obtained:

- A geophysical survey of the Site was attempted/completed by Ground Penetrating Radar Systems Inc. (GPRS), to try and identify buried underground storage tanks (USTs) and/or other buried objects that may pose an environmental risk to the Site. This was performed due to previous USTs removed from the Site in 1992.
GPRS utilized an RD 7000/8000 Radio Frequency detector to actively trace metallic pipes identified on the west side of the Site building and on the south side of the Site. GPRS attempted to use a GSSI EMP-400 Electromagnetic Profiler to try and detect large metallic objects, such as buried USTs and product piping. However, due to the former use of the Site as a metal scrap yard, the ground surface was covered with foundry sculls, metal fencing, metallic slag, and a plethora of metallic objects, both partially buried and sitting on the ground surface. GPRS also attempted to use a 400 MHz ground penetrating radar (GPR) antenna to identify buried metallic objects identified using the previous geophysical instruments. However, no buried metallic objects were detected/identified using the RD 7000/8000 Radio Frequency detector or the GSSI EMP-400 Electromagnetic Profiler. The GPR was used on the west side of the Site building in the location of the previous UST basin; however, no buried objects were identified.

The results of the geophysical survey were inconclusive and buried metallic objects may be unearthed during the Site remediation/excavation activities.

- Installation of sixteen (16) surface soil borings (S1-GP1 through S1-GP16) to a depth of 2.0-feet bsg. The borings were installed for the purpose of soil collection and to assess the current environmental condition related to historical Site operations. A total of sixteen (16) surface soil samples plus the appropriate quality assurance/quality control QA/QC samples, were submitted for laboratory analysis.

- SVOCs and/or PAHs SIM analyses indicated detectable concentrations of benzo(a)anthracene, 1-methylnaphthalene, and/or 2-methylnaphthalene in excess of their respective RCG Residential Soil Migration to Groundwater Screening Levels (RCG Res MTGSLs). Benzo(a)pyrene was the only SVOC/PAH detected in excess of its RCG Residential Soil Exposure Direct Contact Screening Level (RDCSL) of 1.6 mg/kg in three (3) soil samples.

- PCB concentrations in excess of their corresponding RCG Res MTGSLs, RCG RDCSLs, and/or Commercial/Industrial Soil Exposure Direct Contact Screening Levels (IDCSLs) were detected in fifteen (15) of the sixteen (16) surface soil samples. Two (2) surface soil samples had PCB Aroclor 1254 detected at concentrations above its RCG IDCSL. The same soil samples also had laboratory reporting limits for Aroclors 1248 and 1260 in excess of their corresponding RCG RDCSLs and IDCSLs.

- Total RCRA 8 metals analysis consisted of analyzing arsenic, barium, cadmium, total chromium, lead, mercury, selenium, and silver. Hexavalent chromium (Cr (VI)) was also analyzed. None of the surface soil samples had exceedances of the RCG RDCSLs for barium, cadmium, total chromium, selenium, or silver.

- Arsenic was detected at concentrations in excess of its RCG Res MTGSL of 5.9 mg/kg in each sample analyzed. Fourteen (14) of the sixteen (16) surface samples also exhibited arsenic concentrations exceeding its RCG RDCSL (9.5 mg/kg) with
seven (7) of those samples having concentrations exceeding its RCG IDCSL of 30 mg/kg.

- Lead concentrations exceeded its RCG RDCSL of 400 mg/kg in twelve (12) of the sixteen (16) surface soil samples analyzed, with seven (7) of those samples exceeding the lead RCG IDCSL of 800 mg/kg.

- Mercury was detected in all sixteen (16) surface soil samples, but below its RCG Res MTGSL in eight (8) sample locations. Mercury was detected in the remaining eight (8) samples at, or in excess of, its RCG RDCSL/IDCSL of 3.1 mg/kg.

- Total chromium concentrations were detected above laboratory reporting limits in all sixteen (16) surface soil samples with concentrations ranging between 17 mg/kg and 2,090 mg/kg. Cr (VI) was detected above the RCG Res MTGSL of 0.14 mg/kg in two (2) soil samples with a J flag value of 1.7 mg/kg. Cr (VI) concentrations in each of the remaining fourteen (14) soil samples were below the laboratory reporting limits; however, all of the laboratory reporting limits far exceed the RCG Res MTGSL (0.14 mg/kg) and the majority of the reporting limits also exceed the corresponding RCG RDCSL (4.2 mg/kg). According to representatives from Pace, the following is an explanation as to why the samples had to be diluted, thus increasing the corresponding reporting limits: "Pace’s method for hexavalent chromium uses a spectrophotometer, which measures absorbance of light at a specific wavelength when light is passed through the sample. For soil, Pace performs a digestion to bring any hexavalent chromium into solution. Depending on the nature of the soil material, the digestate may vary in background color from pale yellow to dark brown. Filtration will not remove all background color. The darker the color of the digestate, the more Pace has to dilute in order to pass light through to obtain their absorbance measurement. This dilution raises the reporting limit."

Due to the elevated laboratory reporting limits, the Cr (VI) results could not be evaluated against the most stringent RCG Screening Levels. However, when comparing the sample specific laboratory method detection limits for Cr (VI), which ranged from 0.73 mg/kg to 7.8 mg/kg, and/or the total reported chromium concentrations (which includes all chromium species, not just Cr (VI)) for the same soil samples, all of the Cr (VI) concentrations should be less than the RCG IDCSL (63 mg/kg). This is further supported by the fact that only two (2) of the sixteen (16) soil samples exhibited J flag values for Cr (VI), confirming that Cr (VI) was not detected at concentrations above the corresponding method detection limits. Additionally, since Cr (VI) is a subset of the total chromium concentration, it would be safe to assume that the Cr (VI) concentrations are at the very least less than the total chromium concentrations reported for each soil sample.

- Installation of fourteen (14) subsurface soil borings (S1-GP17 through S1-GP30) to the bedrock surface at depths ranging from 15 to 18 feet bgs. However, soil samples collected for analysis ranged from the surface (0-2’ bsg) to 12-14’ bsg. The borings were installed.
for the purpose of soil and groundwater collection and to assess the current environmental condition related to historical Site operations. A total of thirty (30) subsurface soil samples, plus the appropriate quality assurance/quality control QA/QC samples, were submitted for laboratory analysis.

- Per the agreed upon scope of work, SVOC, PAH SIM, and VOC analyses were performed on fourteen (14) subsurface soil samples and two (2) duplicate subsurface samples with no detections in excess of their respective RCG RDCSLs or IDCSLs.

- Per the agreed upon scope of work, PCBs were analyzed from seventeen (17) of the twenty-eight (28) subsurface soil samples. No subsurface PCB Aroclors were detected in excess of their respective RCG Res MTGSLs, RDCSLs, or IDCSLs.

- Per the agreed upon scope of work, total 8 RCRA metals and Cr (VI) were analyzed from twenty-eight (28) subsurface soil samples and two (2) duplicate samples. None of the subsurface soil samples had exceedances of the RCG RDCSLs or IDCSLs for barium, cadmium, total chromium, selenium, or silver.

- Arsenic concentrations in excess of its RCG Res MTGSL of 5.9 mg/kg, but below its RCG RDCSL of 9.5 mg/kg, were detected in twenty-seven (27) samples and two (2) of those samples had arsenic concentrations in excess of its RCG IDCSL of 30 mg/kg.

- Lead concentrations exceeded its RCG RDCSL of 400 mg/kg in four (4) of the thirty (30) soil samples analyzed, with three (3) of those samples exceeding the RCG IDCSL of 800 mg/kg. These subsurface soil samples were collected from depths ranging from 0-2’ bsg to 2-4’ bsg.

- Mercury was detected in three (3) subsurface soil samples at concentrations in excess of its RCG RDCSL/IDCSL of 3.1 mg/kg. One (1) soil sample was collected from 0-2’ bsg, one (1) from 2-4’ bsg, and one (1) sample from 6-8’ bsg.

- Total chromium concentrations were detected above laboratory reporting limits in all thirty (30) subsurface soil samples with concentrations ranging between 6.6 mg/kg and 3,620 mg/kg. Cr (VI) was not detected above the RCG Res MTGSL of 0.14 mg/kg or the RCG RDCSL of 4.2 mg/kg. However, all of the laboratory reporting limits are shown in excess of the RCG Res MTGSL with eight (8) of the reporting limits shown in excess of the RCG RDCSL of 4.2 mg/kg.
Due to the elevated laboratory reporting limits, the Cr (VI) results could not be evaluated against the most stringent RCG Screening Levels. However, when comparing the sample specific laboratory method detection limits for Cr (VI), which ranged from 0.72 mg/kg to 2.0 mg/kg, and/or the total reported chromium concentrations (which includes all chromium species, not just Cr (VI)) for the same soil samples, all of the Cr (VI) concentrations should be less than the RCG IDCSL (63 mg/kg). This is further supported by the fact that only two (2) of the soil samples exhibited J flag values for Cr (VI), confirming that Cr (VI) was not detected at concentrations above the corresponding method detection limits. Additionally, since Cr (VI) is a subset of the total chromium concentration, it would be safe to assume that the Cr (VI) concentrations are at the very least less than the total chromium concentrations reported for each soil sample.

- Groundwater encountered during subsurface boring installations was monitored by the installation of ten (10) temporary groundwater monitoring wells. Each well produced groundwater which was subsequently collected and submitted for laboratory analysis.
  
  o Nine (9) of the ten (10) temporary wells produced enough groundwater to collect samples for analysis of SVOCs, PAHs SIM, and VOCs. Benzo(a)anthracene and benzo(a)pyrene were each detected in groundwater sample S1-GP26-GW1 in excess of their respective RCG Res TAP GWSLs of 0.3 µg/L and 0.2 µg/L. Other than sample S1-GP26-GW1, no SVOCs, PAHs, or VOCs were detected in excess of their respective RCG Res TAP Groundwater Screening Levels (GWSLs).
  
  o PCB Aroclor 1248 was detected in three (3) groundwater samples in excess of its RCG Res TAP GWSL of 0.078 µg/L, including S1-GP17-GW1 which had a reported J flag value of 0.085 µg/L. PCB Aroclor 1254 was detected in excess of the RCG Res TAP GWSL of 0.078 g/L in S1-GP20-GW1 (0.12 µg/L) and in S1-GP21-GW1 (J flag value of 0.080 µg/L).
  
  o Each of the ten (10) wells had enough groundwater to collect samples for total RCRA 8 metals and Cr (VI) analyses. Selenium and mercury were each reported with J flag values, less than their respective RCG Res TAP GWSLs. Arsenic, cadmium, total chromium, and lead were each detected in S1-GP21-GW1 in excess of their respective RCG Res TAP GWSLs. Lead was also detected in excess of its RCG Res TAP GWSL of 15 µg/L in S1-GP20-GW1, S1-GP23-GW1, S1-GP26-GW1, and S1-GP28-GW1. Cr (VI) was detected in eight (8) of the ten (10) groundwater samples analyzed. Cr (VI) exceeded the RCG Res TAP GWSL of 0.35 µg/L in S1-GP20-GW1, S1-GP24-GW1, S1-GP26-GW1, S1-GP27-GW1, and S1-GP30-GW1.
  
  o As previously noted, all of the groundwater samples obtained during the course of this investigation were obtained from temporary monitoring wells and although the temporary sampling points were 2-inches in diameter and sampled using low-flow sampling techniques, it is possible that some of the analytical results obtained from the one-time groundwater samples are biased high due to turbidity.
Groundwater was identified beneath the Site at a depth of approximately 11 feet bsg and limestone bedrock was encountered at a depth of approximately 16 feet bsg during the 2013 Phase II ESA performed by SME. In July 2013, SME determined the groundwater beneath the Site flows to the southeast.

2.4 Potential and Known Contaminants of Concern

Based upon the historical information obtained regarding the subject Site, the Site remedial activities will be focused on the following potential contaminants of concern (COC):

- Poly Aromatic Hydrocarbons (PAHs)
- RCRA 8 Metals & Hexavalent Chromium (Cr VI)
- Polychlorinated Biphenyl’s (PCBs)

2.5 Proposed Reuse of the Site

The Site is currently vacant. The exact future use of the property is not known at this time but it is anticipated that the future use will be commercial and/or residential. For this reason, the soil and groundwater analytical results obtained as part of the proposed RWP activities will be compared with both the 2019 residential and commercial/industrial screening levels found in Table A-6, Appendix A, of the IDEM Remediation Closure Guide (RCG), updated March 4, 2019.
3.0 REMEDIATION WORK PLAN (RWP)

This site-specific RWP will discuss in detail the proposed remediation activities and include information pertaining to the proposed confirmation sampling locations, explain the rationale for laboratory sample selection, and provide a summary of the corresponding analytical methods to be utilized during the remediation project. A summary of the total number of each type of sample will be included and a discussion will be provided regarding the appropriate number of duplicate samples and matrix spike/matrix spike duplicate (MS/MSD) samples.

IWM Consulting understands that an EPA approved Quality Assurance Project Plan (QAPP), which will include a site-specific Health and Safety Plan (HASP), and a site-specific Analysis of Brownfield Cleanup Alternatives (ABCA) will need to be generated and submitted to the IBP for review and approval prior to implementing the field activities.

3.1 Quality Assurance Project Plan (QAPP) and Health and Safety Plan (HASP)

All sampling activities and analytical methods will be conducted in accordance with the EPA approved QAPP. IWM Consulting will prepare a QAPP for the Site. The QAPP previously prepared and submitted to the IFA IBP and EPA for the Phase II Site investigation work completed by IWM Consulting in 2017 will be updated to reflect the currently proposed SOW.

It should be noted that IWM Consulting has experience with the U.S. EPA and knows that the U.S. EPA funded projects require equipment and trip/field blanks, field audits for each Site at least once during the sampling activities, and an individual data evaluation report. A brief discussion of the field audit and data evaluation will be included within the site-specific remediation completion report and the audit form/data evaluation report will be included as attachments to the site-specific remediation completion report.

IWM Consulting anticipates that the QAPP will be submitted on, or before, field activities are initiated with an anticipated submittal date of approximately 2-3 weeks after receiving a signed contract from the IBP to conduct these work activities.

A Site-specific HASP has been prepared for the Site and will be followed during on-site field activities. Task specific Standard Operating Procedures (SOPs) and Job Safety Analysis (JSAs) are included as part of the HASP, as well as pertinent information relating to potential chemicals of concern (COCs), on-site hazards, and emergency contact (telephone numbers and directions to the nearest hospital) information. The HASP will be located on-site during all field activities and will be reviewed by the on-site personnel and with all subcontractors prior to initiating the field work. A copy of the HASP is presented in Appendix A.
3.2 Analysis of Brownfield Cleanup Alternatives (ABCA) & EPA Reporting

The ABCA will provide background information about the Site, identify the applicable regulatory screening levels, and identify a minimum of three (3) cleanup alternatives (including no cleanup activities), including the associated costs and ease of implementation. The ABCA will then identify the selected cleanup approach and provide an approximate timeline for implementing the activities. The ABCA will be available for public review and comment and will be presented at a public meeting in a location in close proximity to the Site.

Additional activities may also be required as part of this phase of the project, including attending meetings pertaining to Davis-Bacon Wage reporting requirements, development and implementation of a Community Relations Plan, and other pre-planning activities which may be required by the IBP as part of this remediation project. IWM Consulting will also update the online EPA ACRES system regarding the implemented remediation activities and assist the IBP with any additional EPA submittals, as requested.

3.3 Utility Clearance and Geophysical Investigation

Potentially buried underground utilities will be identified, marked, and mapped by GPRS at least 72-hours prior to performing any Site activities that requires the disturbance of surface and/or subsurface soils, structures, or debris. IWM Consulting will also contact the Indiana Underground Plant Protection Service (IUPPS) and request an on-site joint meeting to identify, mark, and map public utilities located on, or adjacent to, the Site.

3.4 Soil and Groundwater Confirmation Analytical Methods

Based on the results of the Phase II ESAs completed in 2013 and 2017, the following analytical methods will be utilized for soil remediation confirmation samples and groundwater monitoring samples collected during the course of this project:

- PAHs using SW-846 Method 8270 SIM (soil and water);
- Total RCRA 8 Metals using the appropriate SW-846 Method (soil and water);
- Dissolved RCRA 8 Metals using the appropriate SW-846 Method (water only);
- Cr VI using SW-846 Method 7199 (soil only);
- Cr VI using SW-846 Method 218.6 (water only);
- PCBs using SW-846 Method 8082 (soil and water); and,
- Percent moisture (soil only).

Utilizing SW-846 Method 7199 instead of SW-846 Method 7196A for the Cr VI analysis will ensure that lower laboratory detection and reporting limits are achieved during this phase of the soil investigation.
3.5 Soil Disposal Considerations

Total RCRA metals concentrations for arsenic, lead, and mercury were detected in Site soils in excess of their respective RCG RDCSLs and IDCSLs. In order to dispose of the Site soils at a local soil disposal facility as a non-hazardous solid waste, the landfill has confirmed that additional testing will be required to determine if the leachable arsenic, lead, and/or mercury renders the soils hazardous. Consequently, Toxicity Characteristic Leaching Procedure (TCLP) analyses is required to determine the leachability of those specific metals in soils. The toxicity limits for arsenic (5.0 mg/L), lead (5.0 mg/L), and mercury (0.2 mg/L) determine whether or not the soil is classified as a non-hazardous solid waste or a hazardous waste. Hazardous waste codes for arsenic, lead, and mercury are D004, D008, and D009, respectively. The landfill did confirm that no additional PCB testing was required since all of the historical PCB sampling results were less than 50 mg/kg.

If the soils are determined to be hazardous based on TCLP analyses, the soils can be conditioned in order to change the leachability of the metals in the soil. The pH of the soil is altered by mixing a calcium silicate-based powder with a pH of between 11 and 12 or a magnesium/calcium, sulfur-based powder with a pH of between 10 and 12 in the soil at a ratio of approximately 3 to 5%, depending on the TCLP results. Soil samples from the mixed materials are re-analyzed for TCLP metals and those results are then used to determine if the soils are still considered hazardous. If the soil stabilization is successful, the soils can be disposed as a non-hazardous solid waste instead of a hazardous waste.

3.6 Site Remediation Activities

Based on current Site conditions, the layout of the Site and structures, and the analytical results obtained during the Phase II Site Investigation completed in 2017, the following information summarizes the proposed remediation activities.

- Prior to initiation of the Site activities, all on-site and off-site underground utilities will be located and marked as previously discussed.
- The vegetation that is overgrown on the Site will be removed and properly disposed.
- The debris (i.e., loose fencing, metal debris, concrete, wood) covering the surface at the Site will be removed and properly disposed/recycled.
- Representatives from R&C Fence will temporarily remove, store, and then reinstall the existing chain link fencing on the east side of the Site. This will facilitate the remediation activities and will enable the Site to be secured in the future when the Site is redeveloped.
- Ten (10) of the previous soil sampling locations (S-1-GP3-SS1 (0.5-1.5’), S-1-GP8-SS1 (1-2’), S-1-GP10-SS1 (1-2’), S-1-GP12-SS1 (0.5-1.5’), S-1-GP13-SS1 (0.5-1.5’), S-1-GP14-SS1 (0.0-2’), S-1-GP15-SS1 (0.5-1.5’), S-1-GP16-SS1 (1-2’), S-1-GP18-SS1 (0.0-2’), and S-1-GP29-SS1 (0.0-2’) with elevated concentrations of total arsenic, lead, and/or mercury will be sampled and analyzed using TCLP testing to determine if the metals present in the soils are leachable at...
concentrations in excess of the allowable TCLP limits, rendering them as hazardous. The TCLP sampling locations are depicted on Figure 3.

- Assuming that the initial TCLP sampling confirms that the soil is characteristically non-hazardous, up to 2,500 tons of soil between the surface and approximately 2-foot depth will be removed and transported to the Wabash Valley Landfill for disposal as a non-hazardous solid waste. Some soils from specific locations on the Site at depths up to 4-foot depth will also be removed for disposal.

- If the TCLP sampling results confirm that some or all of the soil is characteristically hazardous due to leachability, then up to 2,500 tons of soil between the surface and approximately 2-foot depth will be mixed with Blastox® 215, a granular, calcium silicate-based additive for stabilizing heavy metals in soils. The Blastox® will be mixed at a ratio of between approximately 3% and 5% by weight into the soils, depending on the TCLP concentrations.

- After conditioning the soil in-situ, up to twenty-five (25) TCLP soil sample locations (anticipated maximum number assuming the landfill requires only 1 sample per 100 tons) will be re-sampled using the TCLP test to determine if the soil mixing with Blastox® 215 has altered the metals leachability, making the soils characteristically non-hazardous. If areas still exceed the TCLP limits, additional Blastox® 215 will be thoroughly mixed with soil and that area will be retested.

- Assuming that the subsequent TCLP sampling confirms that the soil is characteristically non-hazardous, up to 2,500 tons of soil between the surface and approximately 2-foot depth will be removed and transported to the Wabash Valley Landfill for disposal as a non-hazardous solid waste.

- If the soil cannot be amended in a manner that allows the soil to be characteristically non-hazardous, the soil will need to be removed and disposed offsite as characteristically hazardous soil. The soil will be transported to (via HAZMAT approved transporters/containers) and disposed at U.S. Ecology in Belleville, Michigan. A large quantity generator hazardous waste identification number will also need to be secured via submittal of a Hazardous Waste Generator ID application.

- The concrete footer wall and surface of the scale structure on the east side of the Site building will be removed and properly disposed. A maximum of (4) composite TCLP concrete chip samples will be obtained from the concrete and analyzed for TCLP metals (arsenic, lead, and mercury) using the appropriate SW-846 Method to ensure that the concrete is characteristically non-hazardous prior to removal and offsite disposal.

- Soil confirmation samples will be collected from each 20 lineal feet of excavation sidewall (up to 39 samples) and each 400 square feet of excavation bottom (up to 49 samples) for total RCRA metals, PAHs, PCBs, and percent moisture.

- Soil confirmation samples will be collected directly from the base and sidewall of the excavation while wearing dedicated, disposable nitrile gloves and using a disposable plastic scoop, or directly from the excavation base/sidewall by hand while wearing disposable nitrile gloves. Only dedicated, disposal sampling supplies (i.e., new gloves and plastic scoops) will be utilized for each sampling location.
• One (1) duplicate and one (1) MS/MSD soil sample will be obtained during the sampling activities at a rate of one (1) sample per every twenty (20) confirmatory soil samples. The duplicate and MS/MSD samples will be analyzed for the same analytical parameters. Since no volatile organic compounds (VOCs) are being analyzed, no trip blank samples will be submitted for analysis as part of this investigation.

• Post excavation and sampling activities, a geotextile fabric will be installed at the base of the excavation and will serve as a demarcation barrier between the newly imported fill material and the native soil remaining beneath the limits of the excavation.

• The Site will be backfilled with #53 crushed limestone from West Plains Mining in Wabash, Indiana. The crushed stone will be installed in 12-inch lifts and compacted to 95% of a Modified Proctor with a vibratory roller. A nuclear density gauge will be used to check the crushed stone density.

• In accordance with the anticipated QAPP Requirements, IWM Consulting has also included the cost to conduct a field audit during the sampling activities to document that the sampling activities are being conducted in accordance with the approved QAPP and site-specific SAP. If deficiencies are observed during the audit, the observed deficiencies will immediately be discussed with the field personnel and deficiencies will be rectified prior to concluding the audit. A Field Audit checklist will be utilized during the audit and a copy of the checklist will be provided as an attachment to the site-specific Remediation Implementation/Completion report.

• The soil sample analytical results will be compared to the most recent version of the IDEM RCG Screening Levels for soil exposure, residential direct contact and migration to groundwater.

• A Remediation Implementation/Completion report will be generated summarizing the soil remediation activities/results and submitted to the IBP. The report will also include a site-specific data evaluation report, which evaluates the usability of the analytical data obtained during the remediation activities.

• IWM Consulting anticipates on initiating the Site clearing and utility clearance activities as soon as authorization is received from the IBP.

3.7 Groundwater Monitoring Activities

IWM Consulting has evaluated the available analytical data obtained to date from the previous Site investigations, soil excavation confirmation sampling, and the previous subsurface sampling activities and has identified the locations of up to four (4) Site specific groundwater monitoring wells as depicted on Figure 3. IWM Consulting will consult with the IBP PM prior to the well installations in order to determine if these are the most appropriate permanent well locations. The wells will likely be installed within 10-feet of previously sampled soil borings/temporary wells and therefore, no soil samples will be collected for analysis as part of the permanent well installations.
There are currently no permanent groundwater monitoring wells located on the Site. IWM Consulting anticipates that the groundwater monitoring well installation activities will be initiated immediately following the excavation backfill activities. Quarterly groundwater monitoring will be initiated following the well installations and be performed for four (4) consecutive quarters:

- Install up to four (4), 2-inch diameter, schedule 40 flush-threaded PVC monitoring wells with up to ten (10) feet of pre-packed 0.01 slot PVC screen (MW-1 through MW-4) at the Site in order to monitor the groundwater conditions for up to four (4) consecutive calendar quarters. The monitoring wells will be installed and developed by an Indiana licensed well driller. The monitoring well borings will be advanced using 2-inch and 3.25-inch outside diameter dual-tube samplers which should eliminate soil cuttings. Solid core augers may be necessary to advance the wells into the fractured bedrock surface in order to obtain sufficient groundwater for sampling.

- The screens of the monitoring wells will intersect the first aquifer encountered and will be installed at a depth of approximately 20-feet below surface grade. Additional silica or washed quartz sand will be manually installed in the annular space to 1.0 foot above the screen interval, bentonite chips will extend from the top of the quartz sand interval approximately 2.0 feet. The remainder of the annular space to the within 0.5 feet of the surface will be filled with grout. The monitoring wells will be completed with a flush mounted protective cover and associated concrete pad. IWM Consulting will gain approval from the IFA IBP Project Manager prior to finalizing the monitoring well locations.

- Development and purge water (non-hazardous) generated during monitoring well installation and groundwater sampling activities will be containerized on-site for subsequent disposal at an approved facility within one (1) month of generation.

- The exact locations of the monitoring wells have not been determined at this point. However, it is likely that the monitoring well(s) will be installed within ten-feet of previously sampled soil boring locations. Consequently, IWM Consulting has assumed that the well borings will be blank drilled during the installation activities.

- Survey the four (4) permanent groundwater monitoring well elevations to the nearest one-hundredth (1/100) of a foot and determine the groundwater flow direction and gradient. The wells, boring locations, and other Site features will be spatially located on a Site plan.

- The initial and three (3) subsequent groundwater sampling events will include the purging and sampling of the monitoring wells located on the Site. The groundwater samples will be analyzed for total and dissolved RCRA 8 metals using the appropriate SW-846 Method, low-level dissolved Cr VI using SW-846 Method 218.6, PAHs using SW-846 8270SIM, and PCBs using the appropriate SW-846 Method 8082. The groundwater samples will be collected using low-flow sampling techniques with natural attenuation parameters recorded for dissolved oxygen, oxygen reduction potential, temperature, specific conductance, and pH.

- Per the QA/QC guidelines outlined in the RCG, one (1) duplicate groundwater sample and one (1) MS/MSD groundwater sample will also be obtained during each quarterly groundwater sampling event and analyzed for the same parameters. Since
no volatile organics are being analyzed, no trip blank samples will be submitted for VOC analysis.

- The results of each quarterly sampling event will be summarized in a quarterly monitoring reports (QMR) summarizing the analytical results and field activities. The last report will request that the IBP PM assign the Site a NFA designation.
- IWM Consulting will contract with an Indiana licensed well driller to perform well abandonment activities for the wells installed during this investigation once the Site is assigned an NFA designation.
## 4.0 ANTICIPATED TIMELINE AND REPORTING

IWM Consulting anticipates the following timeline in relation to completing this project:

<table>
<thead>
<tr>
<th>Task</th>
<th>Estimated Timeline</th>
<th>Comments</th>
</tr>
</thead>
<tbody>
<tr>
<td>Preparation and Submittal of QAPP, ABCA, CRP, RWP/HASP</td>
<td>March 19, 2019</td>
<td></td>
</tr>
<tr>
<td>Site clearing of vegetation and miscellaneous debris</td>
<td>Initiated week of April 22, 2019</td>
<td>Following approval of QAPP, ABCA, RWP/HASP</td>
</tr>
<tr>
<td>Collection and analysis of TCLP soil samples to determine metal</td>
<td>Initiated week of April 22, 2019</td>
<td>Following approval of RWP. Assumes collection of ten (10) samples in one (1) day and 5 days for analysis</td>
</tr>
<tr>
<td>mixing</td>
<td>Estimated Time</td>
<td></td>
</tr>
<tr>
<td>Soil mixing with Blastox® 215</td>
<td>Initiated week of April 22, 2019</td>
<td>Timeline depends on delivery of product</td>
</tr>
<tr>
<td>Re-collection and re-analysis of TCLP soil samples following soil</td>
<td>Initiated week of April 22, 2019</td>
<td>Assumes collection of twenty (25) samples in one (1) day and 5 days for analysis</td>

<tr>
<td>Remediation Implementation/Completion Report</td>
<td>August 15, 2019</td>
<td>Soil report prepared and submitted within 20-days of receiving confirmation analytical results. Groundwater report submitted as part of the 4th QMR.</td>
</tr>
</tbody>
</table>
IWM Consulting understands that two (2) paper copies and two (2) electronic pdf format copies (on compact disc) of each report will be prepared with one (1) copy of each submitted to the IBP PM and one (1) copy of each to the community representative. One (1) electronic copy will also be submitted to the U.S. EPA, if requested. The reports will be printed on recycled paper and double sided. Additionally, all maps (non-aerials) and tables will be printed legibly in black and white.

The reports will include soil boring logs and/or monitoring well logs, tabulated analytical data, a scaled diagram displaying the sampling locations, and a copy of the laboratory report(s).
5.0 MISCELLANEOUS INFORMATION/GREEN REMEDIATION STRATEGIES

Given the location of the Site, IWM Consulting anticipates on managing and utilizing staff from the Fort Wayne, Indiana office to implement the proposed work activities. Mark Anderson from the Fort Wayne office will be the primary point of contact for this contract.

IWM Consulting is familiar with the Best Management Practices (BMPs) associated with implementing Green Remediation Strategies and will make every attempt to utilize as many BMPs as possible when completing this scope of work. The objective of the Green Remediation Strategies is to minimize the number of mobilizations required to implement the activities, utilize as many local subcontractors as possible to reduce energy/fuel usage and minimize the associated air emissions/carbon footprint, implement energy conservation measures during the work activities to reduce potential air emissions, and select Site investigation methods that minimize mobilizations, energy/air emissions, and generate the least amount of investigation derived waste (IDW). At a minimum, the following BMPs are anticipated to be implemented for this project:

1) Instructing workers to avoid unnecessary engine idling during implementation of the work activities, thus minimizing air emissions;
2) Transportation and disposal of non-hazardous soils and miscellaneous debris at Wabash Valley Landfill located approximately 2.5 miles from the Site;
3) Recycling of metal debris and fencing removed from the Site;
4) Installation of monitoring wells using pre-pack screens, eliminating IDW;
5) Utilization of IWM Consulting staff located in the closest office to complete the field activities, and;
6) Utilize a laboratory that employs green technologies (Attachment B).

IWM Consulting will document the above activities via documentation regarding the steps taken to minimize unnecessary idling of equipment, documentation of the laboratory used for the project, and documentation of the soil disposal documentation generated during the remediation activities.
IWM Consulting appreciates this opportunity to provide the Indiana Brownfields Program with this site-specific RWP. If you have any questions regarding this transmittal, please contact the undersigned at 260-442-3017.

Sincerely,

IWM CONSULTING GROUP, LLC

Purpose: This document defines the Health and Safety considerations for the on-site management activities by IWM personnel and contractors. This document is required by IWM policies and programs and OSHA 29 CFR 1910.120. The basic requirements for the health and safety of the project workers are delineated in the IWM Health and Safety procedures. All personnel on-site will be informed about the pertinent sections of the Health and Safety Plan.

□ Other – System Operation and Maintenance

A. Scope of Work

(Detailed description of project, including types of major equipment to be used, quantities of material to be managed, contaminants, number of specific job locations, (i.e., number of tanks, number of wells, sumps, etc.).)

1) Conduct a geophysical survey of the property for utility locations and possible buried structures. Remove perimeter fencing and clear debris from Site.
2) Sample previously sampled locations for TCLP metals. Mix soil with up to 5% Blastox® soil additive to alter soil pH.
3) Excavate soil to a depth of 2-feet below grade and transport off-site for disposal. Remove concrete scale structure and transport off-site.
4) Collect soil confirmation samples. Backfill excavated area with No. 53 crushed stone over a geotextile demarcation barrier and compact.
5) Install four (4) permanent groundwater monitoring wells and sample using low-flow technology on a quarterly basis for four (4) consecutive quarters.

The work activities will be completed on-site. Off-site work is not applicable for this project.

Appendix A contains a site map(s), which indicates the subject site location, facility layout, work zones, evacuation routes, and other pertinent information for this HASP.

B. Site Location Information

The subject Site is located on the south side of West Water Street and the east side of South Miami Street in Wabash, Indiana. The 0.6-acre property consists of one (1) parcel of land that is developed with a vacant, three-story w/ basement, 13,000 square foot building constructed in 1890, a concrete drive, and an unpaved storage yard. Historically, the Site was utilized as a recycling facility.
Site History

A Phase I ESA, dated December 21, 2012, identified numerous Recognized Environmental Conditions (RECs). The primary RECs include the following: 1) three (3) historical underground storage tanks (USTs) for dispensing of gasoline and diesel fuel closed through removal on the west side of the Site in 1992, 2) the historical use of the Site as a recycling and metal processing facility, 3) the historical storage of drums of petroleum products and/or hazardous substances both inside and outside the building, 4) the reported presence of contamination identified in a proposal from SES Environmental, 5) potential unreported or undetected releases onto the property from sites of current and/or historical automobile services, automotive painting, bulk and/or underground petroleum storage and/or use, painting, dry cleaning operations, and 6) foundry operations located north, northeast, northwest, and south of the property. These RECs were identified as potential sources of possible poly-chlorinated biphenyls (PCBs), petroleum, heavy metals, and/or solvents on the property.

Two (2) Phase II Site investigations have been performed on the Site in July 2013 by Soil and Materials Engineers, Inc. (SME) and in June 2017 by IWM Consulting. The Phase II investigations which included surface and subsurface soil sampling and analysis, and groundwater sampling and analysis, identified elevated concentrations of total RCRA metals (arsenic, cadmium, total chromium, chromium VI, and lead), poly-chlorinated biphenyls, and poly-aromatic hydrocarbons (benzo(a)anthracene, benzo(a)pyrene, 1-methylnaphthalene, and naphthalene).

Area of Concern

Based on the analytical results presented in the Phase II Environmental Site Assessment Report prepared by IWM Consulting, dated August 16, 2017, the entire Site surface, outside the building footprint, is being removed for off-site disposal to a depth of up to 2-feet below surface grade (bsg). Groundwater beneath the Site will be monitored for four (4) consecutive quarters using four (4) permanent groundwater monitoring wells.

Based upon the historical information obtained regarding the subject Site, the following potential contaminants of concern will be sampled and analyzed for confirmation sampling purposes following the soil removal activities and during the groundwater monitoring period:

- Poly-Aromatic Hydrocarbons (PAHs) using SW-846 Method 8270 SIM (soil and water to meet low-level Remediation Closure Guide (RCG) Residential TAP Groundwater Screening Levels (Res TAP GWSLs))
- Total RCRA 8 Metals (arsenic, barium, cadmium, chromium, lead, mercury, selenium, and silver) using the appropriate SW-846 Method (soil and groundwater)
- Hexavalent Chromium (Cr VI) using SW-846 Method 7199 (soil only)
- Hexavalent Chromium (Cr VI) using SW-846 Method 218.6 (water only to meet low-level RCG Res TAP GWSLs)
- PCBs using SW-846 Method 8082 (soil and groundwater)
- Percent moisture (soil only)
Neighborhood Description

The area surrounding the subject site can be characterized as a mixed commercial/industrial setting.

<table>

Topography and Site Access

The Site and surrounding area have gently sloping topography towards the Wabash River to the south of the Site. The primary access point to the Site is from the south side of West Water Street.
II. HAZARD EVALUATION

A. Physical Hazards (trenches, utilities, noise, heavy equipment, biological, etc.) Check appropriate categories (more than one may apply):

- Auto and Plant Traffic
- Slip and Fall
- Overhead Utilities
- Underground Utilities
- Heavy Equipment
- Uneven Terrain
- Trenches
- Noise
- Excavation
- Drilling Equipment
- Other: (Describe below)

Appendix B contains copies a hazard evaluation for each task that summarizes work tasks, associated risks and hazards, and control measures.

B. Chemical Hazards

Based upon the previous Site analytical testing results, the most likely contaminants to be present on-site would be PAHs, PCBs, and heavy metals which are listed below along with the primary hazards of each chemical. The primary hazard of each are identified below.

<table>

B. Subcontractor Requirements

Subcontractor Information:

- **Name:** SCS Environmental Contracting
- **Address:** 7120 Venture Lane, Fort Wayne, Indiana 46818
- **Contact Info:** Corey Fogle/Curt Luebbert (260-497-9006)
- **Scope of Work:** Excavation, Off-Site Trucking, Geoprobe Drilling
- **Training Required:** 40-Hour HAZWOPER; Annual 8-Hour Refreshers

Each subcontractor must provide documentation of training at a minimum.

- Has the contractor been pre-qualified? ■ YES □ NO □ N/A
- If the subcontractor is not pre-qualified, has a pre-qualification package and contract approval been submitted to the regional manager? □ Yes ■ No □ N/A
- If NO, who has authorized the use of the subcontractor? Not Applicable
- Has subcontractor received training? ■ Yes □ No □ N/A
- Has training been documented? ■ Yes □ No □ N/A
- If NO, why? Not Applicable
IV. EQUIPMENT

A. Check Equipment Needed Below. More than one may apply.

□ Drill Rig
■ Geoprobe Rig
■ Excavators
■ Dump Trucks
■ Skid Loaders
□ Fork Trucks
■ Vacuum Tanker
□ Man Lift
□ Torches
■ Chop Saws/Chain Saws
■ Jackhammer
■ Compressor/Compressed Air
□ Pumps
■ Other: (Describe below)
  Bulldozer

Is any special training required? □ 40-Hour OSHA

Is any task being performed for which an SOP is in place? □ Yes □ No □ N/A

If YES, list SOP training below:

<tr>
<td>• Long cotton underwear(^1)</td>
<td>• Coveralls(^1)</td>
</tr>
<tr>
<td>• Coveralls(^1)</td>
<td>• Face shield(^1)</td>
</tr>
<tr>
<td>• Hard hat, Face shield(^1)</td>
<td></td>
</tr>
</tbody>
</table>

\(^1\) Optional.

Safety boots are required on all sites, without respect to the work being performed. Hardhats are required during well installation, construction, drilling and when other overhead hazards are present. Earplugs are required during drilling, jackhammering, and during other such loud activities. In addition, safety glasses and safety vests are advised (and may be required) during gauging and/or sampling activities.
B. Check equipment needed below.

Complete the following form for each work task. Note: this page may be duplicated for separate work tasks.

1. Task Description: Excavation, Geoprobe soil and groundwater sampling, soil sampling

2. Level of Protecting Required: □ Level A  □ Level B  □ Level C  ■ Level D

3. Respiratory Protection Required:

<table>
<thead>
<tr>
<th>Air Purifying</th>
<th>Supplied Air</th>
</tr>
</thead>
<tbody>
<tr>
<td>□ Full/Half Mask (circle one if applicable)</td>
<td>□ SCBA</td>
</tr>
<tr>
<td>Cartridge Type (e.g., magenta for asbestos)</td>

<tr>
<td>□ Dust Mask</td>
<td>□ Escape Bottle</td>
</tr>
</tbody>
</table>
■ Respiratory Protection Not Required For This Task

Breathing air certificate on file? □ Yes  □ No  ■ N/A
If No, breathing air tested? □ Yes  □ No  ■ N/A  Explain: __________________________

4. Protective Clothing Required:

| Tyvek                                             | Hooded                        | Sewn Seam                      |
| Polytyvek                                         | Hooded                        | Sealed Seam                    |
| Saranex/CPF                                       | Hooded                        | Strapped Seam                  |
| Proshield (polypropylene)                         | Rain Gear (PVC)               | Reflective Safety Vest¹       |
| Chemical Resistant Goggles                        | Face Shield                   | Safety Glasses¹                |
| Tyvek Booties                                    | PVC Booties                   | Poly Booties                   |
| Latex (Nuke) Booties                             | Rubber Slush Booties          | Leather Boots¹                 |
■ Steel Toed Footwear¹                             | Silvershield Gloves           | Viton Gloves                   |
| Butyl Rubber Gloves                               | PVC Gloves                    | Neoprene Gloves                |
■ Nitrile Gloves                                  | Latex Gloves                  | Cotton Gloves                  |
■ Leather Gloves (For Manual Handling of Equipment)| Latex Gloves                  | Ear Plugs/Ear Muffs¹           |
■ Other (e.g., Outer Gloves):                       | Hardhat; however, hardhat is only required if working in the immediate vicinity of a drill rig or other heavy equipment (i.e. within 5 or 10 feet).

¹ Item may be required by facility.
VI. CONTAMINATION REDUCTION AND DECONTAMINATION

A. Work Zones

Describe how work zone will be set up and maintained. In high traffic areas traffic cones and/or work vehicle will be used to delineate the work area. The work area for excavation, Geoprobe soil and groundwater sampling will be defined as the immediate area in the vicinity of the excavation/boring location.

B. Decontamination Procedures

Personnel and equipment leaving an identified Exclusion Zone (see section VI. A. above), shall be thoroughly decontaminated.

The standard Level “C” decontamination protocol shall be used with the following decontamination approach:

a. Wash equipment, gloves, and/or boot covers using decon wash and water rinse
b. Remove securing tape from wrists and ankles
c. Remove disposable Tyvek/or coverall (without boots)
d. Remove boot covers and/or outer gloves
e. Remove respirator face mask
f. Remove inner gloves

For Level “D” dress-down, follow steps a, d, and f (as applicable to the equipment used/worn).

Describe personnel/equipment decontamination procedures if the procedures described above are not used or do not apply. Disposable sampling equipment and/or gloves will be removed and disposed of in a plastic trash bag.

Describe equipment decontamination procedure. Non-disposable equipment will be cleaned with an Alconox wash, followed by a water rinse and/or followed by a DI water rinse (if applicable).

Describe how contaminated equipment is disposed. Disposable sampling equipment and/or gloves will be removed and disposed of in a plastic trash bag.

Describe storage of usable protective equipment. Stored in gear bags.

Describe laundering procedure for uniforms. Not Applicable.

Is a locker room facility provided? □ Yes ■ No

Will a decon trailer be on-site? □ Yes ■ No If NO, how will crew change clothing and shower?

At home after shift.

Describe provisions for drinking water. Available locally or brought on-site in a cooler.
Describe provisions for restrooms. If not available on-site, will use local vendors.

Note: Respirator cleaning and inspection procedures may be found in the Respiratory Protection Program.
VII.  SAFETY EQUIPMENT

</tbody>
</table>

1 GCI denotes Combustible Gas Indicator.
2 LEL denotes Lower Explosive Limit.
3 Note: combustible gas readings are not valid in atmospheres with < 19.5% oxygen.
4 Meter readings are not the sole criteria for selecting the level of protection. These are only generalized guidelines and are project specific.
5 Action taken are based upon sustained and/or frequent readings.

Appendix D contains site specific monitoring results (if applicable).
X. HAZARDOUS WASTE OPERATION CONTINGENCY PLAN

Generator’s/Site Name: City of Wabash, Indiana/Former Abe Sposeep & Sons, Inc. I

Location, description, and route to the site: Vacant commercial lot in Wabash, IN

Proceed east onto Production Road for 0.3mi. Turn left onto Lima Road for 0.5 mi. Take ramp right onto I-69 South for 9 mi, towards US-24 W. Keep right on exit 302 towards US-24 W/Huntington. Take US-24 (West) for 20.8 mi. Keep right on local roads for 98 yards towards US-24 W/Wabash. Turn right onto US-24 for 15.2 mi. Road name changes to US-24 Branch (IN-13) for 2.3 mi. Turn left (South) onto North Wabash Street (IN-13) for 0.7 mi. Turn right (West) onto W Water Street for 87 yards. Arrive at destination 55 W Water Street on the left.

Site Contact/Phone: Mayor Scott Long, Site Owner (260) 563-4171

Client Project Manager: Mitchell Smith/IFA/IBP (317) 234-8833

A. Emergency Information

| Police: 911 | Alternate Number: Not applicable |
| Fire: 911 | Alternate Number: Not applicable |
| Ambulance: 911 | Alternate Number: Not applicable |

Hospital Name: Parkview Wabash Hospital
Hospital Address: 710 N East St, Wabash, IN 46992
Hospital Phone: (260) 563-3131

Route to Hospital: From the Former Abe Sposeep & Sons, Inc. I site:

Head east on W Water St toward S Wabash St
Turn left (north) at the 1st cross street onto S Wabash St, proceed N 0.6 miles
Turn right (northeast) onto Manchester Ave, proceed NE 0.3 miles
Turn right (southeast) onto N E St., proceed ≈350 feet to Hospital

Destination will be on the right.

Appendix G depicts a map to the local hospital and/or local medical providers.

Has a copy of the contingency plan been received by the hospital? □ Yes ■ No ■ NA
If NO, explain. Not required for the proposed work activities.

Is receipt of the contingency plan by local authorities documented? □ Yes ■ No ■ NA
If NO, explain. Not required for the proposed work activities.

Has the hospital been notified of job site activities and chemical hazards? □ Yes ■ No ■ NA
If NO, explain. Not required for the proposed work activities.

B. Evacuation Route/Emergency Procedures

See attached map in Appendix A.

Describe evacuation alarm procedure. Verbal warning to all immediate personnel. Follow with phone call(s) to key personnel.

Evacuation route description. Away from area of danger. Evacuation route map in Appendix A.

Assembly Area description. Assemble on Dorais Chevrolet parking lot south of the site.

C. Safety Plan Amendments

Amendments to this HASP and Contingency Plan are maintained in Appendix E.

D. HASP and Contingency Plan Sign-Off

All site personnel (employees and their subcontractors) will review this HASP and Contingency Plan. This plan provides site personnel with an orientation to the job task including:
- Site Overview
- Emergency Response Procedures
- Potential Physical & Health Hazards of on-site hazardous materials
- PPE Requirements
- Site Security
  - Hazards of Confined Spaces
  - Site-specific environmental regulatory requirements

**Appendix F** contains a plan sign-off sheet.

<tr>
<td></td>
<td></td>
<td>No employee may enter a trench greater than foot in depth without notifying the HSO, obtaining a confined space permit, and obeying the confined space permit</td>
</tr>
<tr>
<td>Working with and near heavy machinery</td>
<td></td>
<td>Spotter required to stay in the operator’s field of vision at all times when digging or moving soil (spotter wearing reflective safety vest)</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Universal hand signals are to be agreed upon by operator and spotter prior to work commencing</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Work area needs to be barricaded or employee needs to be stationed to keep all other employees, pedestrians, and vehicles out of the work area</td>
</tr>
</tbody>
</table>
Trench collapse

Keep all equipment and spoil piles at least 4 feet from the excavation
Use planks for walking/working surfaces around the excavation to distribute the weight of equipment and employees
No employee may enter a trench greater than foot in depth without notifying the HSO, obtaining a confined space permit, and obeying the confined space permit
Before any work is performed in a trench (after proper CSE permit is obtained, see above), the soil must be analyzed by a competent person and the trench must be sloped or shored to OSHA specifications
The Competent Person will make the determination if additional protective measures such as shoring or trench box will be required prior to start of work. Employees not working directly next to the trench should keep their work area away from the open hole

APPENDIX C

MATERIAL SAFETY DATA SHEETS/ SAFETY DATA SHEETS

And/or

PUBLIC HEALTH STATEMENTS FOR COMPOUNDS OF INTEREST
Benz(a)Anthracene

General Description

Synonyms: Cobalt metal dust; Cobalt metal fume
OSHA IMIS Code Number: 0350
Chemical Abstracts Service (CAS) Registry Number: 56-55-3
NIOSH Registry of Toxic Effects of Chemical Substances (RTECS) Identification Number: CV9275000

Exposure Limits

OSHA Permissible Exposure Limit (PEL):
- General Industry: See Coal Tar Pitch Volatiles (Benzene Soluble Fraction)

American Conference of Governmental Industrial Hygienists (ACGIH) Threshold Limit Value (TLV): Appendix A2 (Suspected Carcinogen)

Health Factors

Carcinogenic Classification:
- National Toxicology Program: Suspect Human Carcinogen
- International Agency for Research on Cancer (IARC): Group 2A, probably carcinogenic to humans (PDF)

Monitoring Methods used by OSHA

Primary Laboratory Sampling/Analytical Method (SLC1):

Sampling Media

- Pre-cleaned Glass Fiber Filter (37 mm)
- maximum volume: 960 Liters
- maximum flow rate: 2.0 L/min
- current analytical method: High Performance Liquid Chromatography; HPLC/UV/FLU
- method reference: 2 (OSHA In-House File)
- method classification: Partially Validated
- note: OSHA personnel can obtain pre-cleaned filters, vials, and Teflon-lined caps from SLTC. Immediately after sampling, transfer filter to glass scintillation vial and seal with Teflon-lined cap. Protect from light.
Limit the amount of bulk submitted to one gram or one mL

**Conditions:**
Column: C18 mobile phase: 85:15 Acetonitrile: Water
detector wavelength: 254nm flourescence
detection limit: excitation: 254nm emissions: 370nm

**All Trademarks are the property of their respective owners.**

Material Safety Data Sheet
Benzo[a]pyrene, 98%

ACC# 37175

Section 1 - Chemical Product and Company Identification

**MSDS Name:** Benzo[a]pyrene, 98%

Section 3 - Hazards Identification

**EMERGENCY OVERVIEW**

Appearance: yellow to brown powder.

**Danger!** May cause harm to the unborn child. May impair fertility. May cause eye, skin, and respiratory tract irritation. Toxic to aquatic organisms, may cause long-term adverse effects in the aquatic environment. Cancer hazard. May cause allergic skin reaction. May cause heritable genetic damage.

**Target Organs:** Reproductive system, skin.

**Potential Health Effects**

**Eye:** May cause eye irritation.

**Skin:** May cause skin irritation. May be harmful if absorbed through the skin. May cause an allergic reaction in certain individuals.

**Ingestion:** May cause irritation of the digestive tract. The toxicological properties of this substance have not been fully investigated. May be harmful if swallowed.

**Inhalation:** May cause respiratory tract irritation. The toxicological properties of this substance have not been fully investigated. May be harmful if inhaled.

**Chronic:** May cause cancer in humans. May cause reproductive and fetal effects. Laboratory experiments have resulted in mutagenic effects.

Section 4 - First Aid Measures
| Benzo[a]pyrene | 0.2 mg/m³ TWA (as benzene soluble aerosol) (listed under Coal tar pitches). | 0.1 mg/m³ TWA (cyclohexane-extractable fraction) (listed under Coal tar pitches).80 mg/m³ IDLH (listed under Coal tar pitches). | 0.2 mg/m³ TWA (as benzene soluble fraction) (listed under Coal tar pitches). |

**OSHA Vacated PELs:** Benzo[a]pyrene: No OSHA Vacated PELs are listed for this chemical.

**Personal Protective Equipment**

- **Eyes:** Wear appropriate protective eyeglasses or chemical safety goggles as described by OSHA's eye and face protection regulations in 29 CFR 1910.133 or European Standard EN166.
- **Skin:** Wear appropriate protective gloves to prevent skin exposure.
- **Clothing:** Wear appropriate protective clothing to prevent skin exposure.
- **Respirators:** A respiratory protection program that meets OSHA's 29 CFR 1910.134 and ANSI Z88.2 requirements or European Standard EN 149 must be followed whenever workplace conditions warrant respirator use.

### Section 9 - Physical and Chemical Properties

**Physical State:** Powder
**Appearance:** yellow to brown
**Odor:** faint aromatic odor
**pH:** Not available.
**Vapor Pressure:** Not available.
**Vapor Density:** Not available.
**Evaporation Rate:** Not available.
**Viscosity:** Not available.
**Boiling Point:** 495 deg C @ 760 mm Hg
**Freezing/Melting Point:** 175 - 179 deg C
** Decomposition Temperature:** Not available.
**Solubility:** 1.60x10⁻³ mg/l @ 25°C
**Specific Gravity/Density:** Not available.
**Molecular Formula:** C20H12
**Molecular Weight:** 252.31

### Section 10 - Stability and Reactivity

**Chemical Stability:** Stable under normal temperatures and pressures.
**Conditions to Avoid:** Dust generation.
**Incompatibilities with Other Materials:** Strong oxidizing agents.
**Hazardous Decomposition Products:** Carbon monoxide, carbon dioxide.
**Hazardous Polymerization:** Has not been reported.

### Section 11 - Toxicological Information

**RTECS#:**
**CAS# 50-32-8:** DJ3675000
**LD50/LC50:**
Not available.

https://fscimage.fishersci.com/msds/37175.htm 2/24/2017
None of the chemicals are on the Health & Safety Reporting List.

**Chemical Test Rules**
None of the chemicals in this product are under a Chemical Test Rule.

**Section 12b**
None of the chemicals are listed under TSCA Section 12b.

**TSCA Significant New Use Rule**
None of the chemicals in this material have a SNUR under TSCA.

**CERCLA Hazardous Substances and corresponding RQs**
CAS# 50-32-8: 1 lb final RQ: 0.454 kg final RQ

**SARA Section 302 Extremely Hazardous Substances**
None of the chemicals in this product have a TPQ.

**SARA Codes**
CAS # 50-32-8: immediate, delayed.

**Section 313**
This material contains Benzo[a]pyrene (CAS# 50-32-8, >96%), which is subject to the reporting requirements of Section 313 of SARA Title III and 40 CFR

**Clean Air Act:**
This material does not contain any hazardous air pollutants.
This material does not contain any Class 1 Ozone depletors.
This material does not contain any Class 2 Ozone depletors.

**Clean Water Act:**
None of the chemicals in this product are listed as Hazardous Substances under the CWA.
CAS# 50-32-8 is listed as a Priority Pollutant under the Clean Water Act.
None of the chemicals in this product are listed as Toxic Pollutants under the CWA.

**OSHA:**
None of the chemicals in this product are considered highly hazardous by OSHA.

**STATE**
CAS# 50-32-8 can be found on the following state right to know lists: California, New Jersey, Pennsylvania, Minnesota, Massachusetts.

**California Prop 65**
The following statement(s) is(are) made in order to comply with the California Safe Drinking Water Act:
WARNING: This product contains Benzo[a]pyrene, a chemical known to the state of California to cause cancer.
California No Significant Risk Level: CAS# 50-32-8: 0.06 æg/day NSRL

**European/International Regulations**

**European Labeling in Accordance with EC Directives**

**Hazard Symbols:**
- T N

**Risk Phrases:**
- R 43 May cause sensitization by skin contact.
- R 45 May cause cancer.
- R 46 May cause heritable genetic damage.
- R 60 May impair fertility.
- R 61 May cause harm to the unborn child.
- R 50/53 Very toxic to aquatic organisms, may cause long-term adverse effects in the aquatic environment.

**Safety Phrases:**
- S 45 In case of accident or if you feel unwell, seek medical advice immediately (show the label where possible).
- S 53 Avoid exposure - obtain special instructions before use.
- S 60 This material and its container must be disposed of as hazardous
- MATERIAL SAFETY DATA SHEET -

SECTION 1 - CHEMICAL PRODUCT AND COMPANY IDENTIFICATION

MSDS Name : BENZO(B)FLUORANTHENE
Company Identification : Clearsynth Labs Pvt. Ltd.
413 Laxmi Mall, New Link Road, Andheri (W),
Mumbai-400 053, INDIA
For information call : +91-22-26355700
For emergencies call : +91-22-26355699

Risk Phrases: 22

- SECTION 3 - HAZARDS IDENTIFICATION

EMERGENCY OVERVIEW
Harmful if swallowed.

Potential Health Effects:
The toxicological properties of this material have not been investigated. Use appropriate procedures to prevent opportunities for direct contact with the skin or eyes and to prevent inhalation. Compound is Non-hazardous, Non-Toxic/Non-Flammable.

- SECTION 4 - FIRST AID MEASURES

- Eyes:
Immediately flush eyes with plenty of water for at least 15 minutes, occasionally lifting the upper and lower eyelids.

- Skin:
Flush skin with plenty of water for at least 15 minutes while removing contaminated clothing and shoes.

- Ingestion:
Do NOT induce vomiting. If conscious and alert, rinse mouth and drink 2-4 cupfuls of milk or water.

- Inhalation:
Remove from exposure and move to fresh air immediately.

Notes to Physician:

- SECTION 5 - FIRE FIGHTING MEASURES

- General Information:
As in any fire, wear a self-contained breathing apparatus in pressure-demand, MSHA/NIOSH (approved or equivalent), and full protective gear. During a fire, irritating and highly toxic gases may be generated by thermal decomposition or
SECTION 6 - ACCIDENTAL RELEASE MEASURES

General Information: Use proper personal protective equipment as indicated in Section 8.
Spills/Leaks: Clean up spills immediately, observing precautions in the Protective Equipment section. Sweep up, then place into a suitable container for disposal.

SECTION 7 - HANDLING and STORAGE

Handling: Wash thoroughly after handling. Remove contaminated clothing and wash before reuse. Avoid contact with eyes, skin, and clothing. Avoid ingestion and inhalation.
Storage: Store in a well closed container.

SECTION 8 - EXPOSURE CONTROLS, PERSONAL PROTECTION

Engineering Controls:
Use adequate general or local exhaust ventilation to keep airborne concentrations below the permissible exposure limits.
Use process enclosure, local exhaust ventilation, or other engineering controls to control airborne levels.
Personal Protective Equipment
Eyes: Wear safety glasses and chemical goggles if splashing is possible.
Skin: Wear appropriate protective gloves and clothing to prevent skin exposure.
Clothing: Wear appropriate protective clothing to minimize contact with skin.
Respirators:
Wear a NIOSH/MSHA or European Standard EN 149 approved full-facepiece airline respirator in the positive pressure mode with emergency escape provisions.

SECTION 9 - PHYSICAL AND CHEMICAL PROPERTIES

Physical State:
Molecular Formula: C20H12
Molecular Weight:

SECTION 10 - STABILITY AND REACTIVITY

Chemical Stability:
Stable under normal temperatures and pressures.
Conditions to Avoid:
Incompatible materials, strong oxidants.
Incompatibilities with Other Materials:
Strong oxidizing agents, strong bases.
Hazardous Decomposition Products:
Nitrogen oxides, carbon monoxide, irritating and toxic fumes and gases, carbon dioxide, nitrogen.
Hazardous Polymerization: Has not been reported.

SECTION 11 - TOXICOLOGICAL INFORMATION

RTECS#:
CAS#: LD50/LC50:
Draize test, rabbit, eye: 100 mg/24H Moderate; Oral,
mouse: LD50 = 300 mg/kg; Oral, rabbit: LD50 = 3200 mg/kg; Oral, rat:
LD50 = 980 mg/kg.
Carcinogenicity:
Salicylamide -
Not listed by ACGIH, IARC, NIOSH, NTP, or OSHA.
See actual entry in RTECS for complete information.

SECTION 12 - ECOLOGICAL INFORMATION

SECTION 13 - DISPOSAL CONSIDERATIONS

Dispose of in a manner consistent with federal, state, and local regulations.

SECTION 14 - TRANSPORT INFORMATION

IATA No information available.
IMO No information available.
ID/ADR No information available.

SECTION 15 - REGULATORY INFORMATION

</table>

Toxicological Data on Ingredients: Cadmium: ORAL (LD50): Acute: 2330 mg/kg [Rat.]. 890 mg/kg [Mouse]. DUST (LC50): Acute: 50 ppm 4 hour(s) [Rat].

Section 3: Hazards Identification

Potential Acute Health Effects:
Hazardous in case of ingestion, of inhalation. Slightly hazardous in case of skin contact (irritant, sensitizer), of eye contact (irritant). Severe over-exposure can result in death.

Potential Chronic Health Effects:
CARCINOGENIC EFFECTS: Classified A2 (Suspected for human.) by ACGIH, 2 (Reasonably anticipated.) by NTP.
MUTAGENIC EFFECTS: Not available. TERATOGENIC EFFECTS: Not available. DEVELOPMENTAL TOXICITY: Not available. The substance is toxic to kidneys, lungs, liver. Repeated or prolonged exposure to the substance can produce target organs damage. Repeated exposure to an highly toxic material may produce general deterioration of health by an accumulation in one or many human organs.

Section 4: First Aid Measures
Eye Contact: No known effect on eye contact, rinse with water for a few minutes.

Skin Contact:
After contact with skin, wash immediately with plenty of water. Gently and thoroughly wash the contaminated skin with running water and non-abrasive soap. Be particularly careful to clean folds, crevices, creases and groin. Cover the irritated skin with an emollient. If irritation persists, seek medical attention. Wash contaminated clothing before reusing.

Serious Skin Contact: Not available.

Inhalation: Allow the victim to rest in a well ventilated area. Seek immediate medical attention.

Serious Inhalation:
Evacuate the victim to a safe area as soon as possible. Loosen tight clothing such as a collar, tie, belt or waistband. If breathing is difficult, administer oxygen. If the victim is not breathing, perform mouth-to-mouth resuscitation. WARNING: It may be hazardous to the person providing aid to give mouth-to-mouth resuscitation when the inhaled material is toxic, infectious or corrosive. Seek immediate medical attention.

Ingestion:
Do not induce vomiting. Examine the lips and mouth to ascertain whether the tissues are damaged, a possible indication that the toxic material was ingested; the absence of such signs, however, is not conclusive. Loosen tight clothing such as a collar, tie, belt or waistband. If the victim is not breathing, perform mouth-to-mouth resuscitation. Seek immediate medical attention.

Serious Ingestion: Not available.

---

Section 5: Fire and Explosion Data

Flammability of the Product: May be combustible at high temperature.

Auto-Ignition Temperature: 570°C (1058°F)

Flash Points: Not available.

Flammable Limits: Not available.

Products of Combustion: Some metallic oxides.

Fire Hazards in Presence of Various Substances:
Non-flammable in presence of open flames and sparks, of heat, of oxidizing materials, of reducing materials, of combustible materials, of moisture.

Explosion Hazards in Presence of Various Substances:
Risks of explosion of the product in presence of mechanical impact: Not available. Risks of explosion of the product in presence of static discharge: Not available.

Fire Fighting Media and Instructions:
SMALL FIRE: Use DRY chemical powder. LARGE FIRE: Use water spray, fog or foam. Do not use water jet.

Special Remarks on Fire Hazards:
Material in powder form, capable of creating a dust explosion. When heated to decomposition it emits toxic fumes.

Special Remarks on Explosion Hazards: Not available.

---

Section 6: Accidental Release Measures

Small Spill: Use appropriate tools to put the spilled solid in a convenient waste disposal container.

Large Spill:
Use a shovel to put the material into a convenient waste disposal container. Be careful that the product is not present at a concentration level above TLV. Check TLV on the MSDS and with local authorities.

---

Section 7: Handling and Storage
Precautions:
Keep locked up. Keep away from heat. Keep away from sources of ignition. Empty containers pose a fire risk, evaporate the residue under a fume hood. Ground all equipment containing material. Do not ingest. Do not breathe dust. Wear suitable protective clothing. In case of insufficient ventilation, wear suitable respiratory equipment. If ingested, seek medical advice immediately and show the container or the label. Keep away from incompatibles such as oxidizing agents.

Storage:
Keep container dry. Keep in a cool place. Ground all equipment containing material. Keep container tightly closed. Keep in a cool, well-ventilated place. Highly toxic or infectious materials should be stored in a separate locked safety storage cabinet or room.

Section 8: Exposure Controls/Personal Protection

Engineering Controls:
Use process enclosures, local exhaust ventilation, or other engineering controls to keep airborne levels below recommended exposure limits. If user operations generate dust, fume or mist, use ventilation to keep exposure to airborne contaminants below the exposure limit.

Personal Protection: Safety glasses. Lab coat. Dust respirator. Be sure to use an approved/certified respirator or equivalent. Gloves.

Personal Protection in Case of a Large Spill:
Splash goggles. Full suit. Dust respirator. Boots. Gloves. A self contained breathing apparatus should be used to avoid inhalation of the product. Suggested protective clothing might not be sufficient; consult a specialist BEFORE handling this product.

Exposure Limits:
TWA: 0.01 (ppm) Consult local authorities for acceptable exposure limits.

Section 9: Physical and Chemical Properties

Physical state and appearance: Solid. (Lustrous solid.)
Odor: Not available.
Taste: Not available.
Molecular Weight: 112.4 g/mole
Color: Silvery.

pH (1% soln/water): Not applicable.
Boiling Point: 765°C (1409°F)
Melting Point: 320.9°C (609.6°F)
Critical Temperature: Not available.
Specific Gravity: 8.64 (Water = 1)
Vapor Pressure: Not applicable.
Vapor Density: Not available.
Volatility: Not available.
Odor Threshold: Not available.
Water/Oil Dist. Coeff.: Not available.
Ionicity (in Water): Not available.
Dispersion Properties: Not available.
**Solubility:** Insoluble in cold water, hot water, methanol, diethyl ether, n-octanol.

### Section 10: Stability and Reactivity Data

**Stability:** The product is stable.

**Instability Temperature:** Not available.

**Conditions of Instability:** Not available.

**Incompatibility with various substances:** Reactive with oxidizing agents.

**Corrosivity:** Not considered to be corrosive for metals and glass.

**Special Remarks on Reactivity:** Reacts violently with potassium.

**Special Remarks on Corrosivity:** Not available.

**Polymerization:** No.

### Section 11: Toxicological Information

**Routes of Entry:** Inhalation. Ingestion.

**Toxicity to Animals:**
WARNING: THE LC50 VALUES HEREUNDER ARE ESTIMATED ON THE BASIS OF A 4-HOUR EXPOSURE. Acute oral toxicity (LD50): 890 mg/kg [Mouse]. Acute toxicity of the dust (LC50): 229.9 mg/m3 4 hour(s) [Rat].

**Chronic Effects on Humans:**
CARCINOGENIC EFFECTS: Classified A2 (Suspected for human.) by ACGIH, 2 (Reasonably anticipated.) by NTP. The substance is toxic to kidneys, lungs, liver.

**Other Toxic Effects on Humans:**
Hazardous in case of ingestion, of inhalation. Slightly hazardous in case of skin contact (irritant, sensitizer).

**Special Remarks on Toxicity to Animals:** Not available.

**Special Remarks on Chronic Effects on Humans:** An allergen. 0047 Animal: embryotoxic, passes through the placental barrier.

**Special Remarks on other Toxic Effects on Humans:** May cause allergic reactions, exzema and/or dehydration of the skin.

### Section 12: Ecological Information

**Ecotoxicity:** Not available.

**BOD5 and COD:** Not available.

**Products of Biodegradation:**
Possibly hazardous short term degradation products are not likely. However, long term degradation products may arise.

**Toxicity of the Products of Biodegradation:** The products of degradation are as toxic as the original product.

**Special Remarks on the Products of Biodegradation:** Not available.

### Section 13: Disposal Considerations

**Waste Disposal:**

### Section 14: Transport Information
Section 15: Other Regulatory Information

Federal and State Regulations:
California prop. 65: This product contains the following ingredients for which the State of California has found to cause cancer, birth defects or other reproductive harm, which would require a warning under the statute: Cadmium
Pennsylvania RTK: Cadmium
Massachusetts RTK: Cadmium
TSCA 8(b) inventory:
SARA 313 toxic chemical notification and release reporting:
CERCLA: Hazardous substances.: Cadmium

Other Classifications:
WHMIS (Canada):
CLASS D-1A: Material causing immediate and serious toxic effects (VERY TOXIC).
CLASS D-2A: Material causing other toxic effects (VERY TOXIC).

DSCL (EEC):
R26- Very toxic by inhalation. R45- May cause cancer.

HMIS (U.S.A.):
Health Hazard: 3
Fire Hazard: 1
Reactivity: 0

National Fire Protection Association (U.S.A.):
Health: 3
Flammability: 1
Reactivity: 0
Specific hazard:

Protective Equipment:
Gloves. Lab coat. Dust respirator. Be sure to use an approved/certified respirator or equivalent. Wear appropriate respirator when ventilation is inadequate. Safety glasses.

Toxicological Data on Ingredients: Chloroform: ORAL (LD50): Acute: 695 mg/kg [Rat], 36 mg/kg [Mouse], 820 mg/kg [Guinea pig]. DERMAL (LD50): Acute: >20000 mg/kg [Rabbit]. VAPOR (LC50): Acute: 47702 mg/m 4 hours [Rat].

Section 3: Hazards Identification

Potential Acute Health Effects: Hazardous in case of skin contact (irritant), of eye contact (irritant), of ingestion, of inhalation. Slightly hazardous in case of skin contact (permeator).

Potential Chronic Health Effects: CARCINOGENIC EFFECTS: Classified + (Proven.) by NIOSH. Classified A3 (Proven for animal.) by ACGIH, 2B (Possible for human.) by IARC. Classified 2 (Some evidence.) by NTP. MUTAGENIC EFFECTS: Mutagenic for mammalian somatic cells. Mutagenic for bacteria and/or yeast. TERATOGENIC EFFECTS: Not available. DEVELOPMENTAL TOXICITY: Not available. The substance may be toxic to kidneys, liver, heart. Repeated or prolonged exposure to the substance can produce target organs damage.

Section 4: First Aid Measures

Eye Contact: Check for and remove any contact lenses. In case of contact, immediately flush eyes with plenty of water for at least 15 minutes. Cold water may be used. WARM water MUST be used. Get medical attention.
**Skin Contact:** In case of contact, immediately flush skin with plenty of water. Cover the irritated skin with an emollient. Remove contaminated clothing and shoes. Wash clothing before reuse. Thoroughly clean shoes before reuse. Get medical attention.

**Serious Skin Contact:** Wash with a disinfectant soap and cover the contaminated skin with an anti-bacterial cream. Seek immediate medical attention.

**Inhalation:** If inhaled, remove to fresh air. If not breathing, give artificial respiration. If breathing is difficult, give oxygen. Get medical attention.

**Serious Inhalation:** Evacuate the victim to a safe area as soon as possible. Loosen tight clothing such as a collar, tie, belt or waistband. If breathing is difficult, administer oxygen. If the victim is not breathing, perform mouth-to-mouth resuscitation. **WARNING:** It may be hazardous to the person providing aid to give mouth-to-mouth resuscitation when the inhaled material is toxic, infectious or corrosive. Seek medical attention.

**Ingestion:** Do NOT induce vomiting unless directed to do so by medical personnel. Never give anything by mouth to an unconscious person. If large quantities of this material are swallowed, call a physician immediately. Loosen tight clothing such as a collar, tie, belt or waistband.

**Serious Ingestion:** Not available.

**Section 6: Accidental Release Measures**

**Small Spill:** Absorb with an inert material and put the spilled material in an appropriate waste disposal.

**Large Spill:** Absorb with an inert material and put the spilled material in an appropriate waste disposal. Be careful that the product is not present at a concentration level above TLV. Check TLV on the MSDS and with local authorities.

---

**Section 7: Handling and Storage**

**Precautions:** Do not ingest. Do not breathe gas/fumes/ vapor/spray. Wear suitable protective clothing. In case of insufficient ventilation, wear suitable respiratory equipment. If ingested, seek medical advice immediately and show the container or the label. Avoid contact with skin and eyes. Keep away from incompatibles such as metals, alkalis.

**Storage:** Keep container tightly closed. Keep container in a cool, well-ventilated area. Sensitive to light. Store in light-resistant containers.

---

---

---
**Section 8: Exposure Controls/Personal Protection**

**Engineering Controls:** Provide exhaust ventilation or other engineering controls to keep the airborne concentrations of vapors below their respective threshold limit value. Ensure that eyewash stations and safety showers are proximal to the work-station location.

**Personal Protection:** Splash goggles. Lab coat. Vapor respirator. Be sure to use an approved/certified respirator or equivalent. Gloves.

**Personal Protection in Case of a Large Spill:** Splash goggles. Full suit. Vapor respirator. Boots. Gloves. A self contained breathing apparatus should be used to avoid inhalation of the product. Suggested protective clothing might not be sufficient; consult a specialist BEFORE handling this product.

**Exposure Limits:** TWA: 10 (ppm) [Australia] Inhalation TWA: 2 (ppm) from OSHA (PEL) [United States] Inhalation STEL: 9.78 (mg/m3) from NIOSH Inhalation STEL: 2 (ppm) from NIOSH Inhalation TWA: 9.78 (mg/m3) from OSHA (PEL) [United States] Inhalation TWA: 10 (ppm) from ACGIH (TLV) [United States] [1999] Inhalation TWA: 2 (ppm) [United Kingdom (UK)] Inhalation TWA: 9.9 (mg/m3) [United Kingdom (UK)] Inhalation Consult local authorities for acceptable exposure limits.

**Section 9: Physical and Chemical Properties**

**Physical state and appearance:** Liquid.

**Odor:** Pleasant. Sweetish. Etheric. Non-irritating

**Taste:** Burning. Sweet.

**Molecular Weight:** 119.38 g/mole

**Color:** Colorless. Clear

**pH (1% soln/water):** Not available.

**Boiling Point:** 61°C (141.8°F)

**Melting Point:** -63.5°C (-82.3°F)

**Critical Temperature:** 263.33°C (506°F)

**Specific Gravity:** 1.484 (Water = 1)

**Vapor Pressure:** 21.1 kPa (@ 20°C)

**Vapor Density:** 4.36 (Air = 1)

**Volatile:** Not available.

**Odor Threshold:** 85 ppm

**Water/Oil Dist. Coeff.:** The product is more soluble in oil; log(oil/water) = 2

**Ionicity (in Water):** Not available.

**Dispersion Properties:** Not available.

**Solubility:** Very slightly soluble in cold water.

**Section 10: Stability and Reactivity Data**

**Stability:** The product is stable.

**Instability Temperature:** Not available.

**Conditions of Instability:** Incompatible materials, Light

**Incompatibility with various substances:** Reactive with metals, alkalis.

**Corrosivity:** Non-corrosive in presence of glass.
**Special Remarks on Reactivity:** Light Sensitive. Incompatible with triisopropyl phosphine, acetone, disilane, fluorine, strong bases and reactive metals (aluminum, magnesium in powdered form), light.

**Special Remarks on Corrosivity:** It will attack some forms of plastics, rubber, and coatings.

**Polymerization:** Will not occur.

---

### Section 11: Toxicological Information

**Routes of Entry:** Absorbed through skin. Eye contact. Inhalation.

**Toxicity to Animals:** WARNING: THE LC50 VALUES HERUNDER ARE ESTIMATED ON THE BASIS OF A 4-HOUR EXPOSURE. Acute oral toxicity (LD50): 36 mg/kg [Mouse]. Acute dermal toxicity (LD50): >20000 mg/kg [Rabbit]. Acute toxicity of the vapor (LC50): 47702 mg/m 4 hours [Rat].

**Chronic Effects on Humans:** CARCINOGENIC EFFECTS: Classified + (Proven) by NIOSH. Classified A3 (Proven for animal.) by ACGIH, 2B (Possible for human.) by IARC. Classified 2 (Some evidence.) by NTP. MUTAGENIC EFFECTS: Mutagenic for mammalian somatic cells. Mutagenic for bacteria and/or yeast. May cause damage to the following organs: kidneys, liver, heart.

**Other Toxic Effects on Humans:** Hazardous in case of skin contact (irritant), of ingestion, of inhalation. Slightly hazardous in case of skin contact (permeator).

**Special Remarks on Toxicity to Animals:** Not available.

**Special Remarks on Chronic Effects on Humans:** May affect genetic material (possible mutagen) and cause adverse reproductive effects (embryotoxicity and fetotoxicity) Suspected carcinogen (tumorigenic) and teratogen based on animal data. Human: passes the placental barrier, detected in maternal milk.

**Special Remarks on other Toxic Effects on Humans:** Acute Potential Health Effects: Skin: Causes skin irritation and may cause chemical burns. Eye: Causes eye irritation, burning pain and reversible injury to corneal epithelium. Inhalation: Causes irritation of the respiratory system (mucus membranes). May affect behavior/Nervous system (CNS depressant, fatigue, dizziness, nervousness, giddiness, euphoria, loss of coordination and judgement, weakness, hallucinations, muscle contraction/spasticity, general anesthetic, spastic paralysis, headache), anorexia (neurological and gastrointestinal sympotms resembling chronic alcoholism), and possibly coma and death. May affect the liver, kidneys and gastrointestinal tract (nausea, vomiting). Ingestion: Causes gastrointestinal tract irritation (nausea, vomiting). May affect the liver, urinary system (kidneys), respiration, behavior/nervous system (symptoms similar to inhalation),and heart. Chronic Potential Health Effects: Inhalation: Prolonged or repeated inhalation may affect the liver (hepatitis, jaundice, hepatocellular necrosis), metabolism (weight loss), respiration (fibrosis, pneumoconiosis), behavior/central nervous system (symptoms similar to acute inhalation), blood, musculoskeletal system, and kidneys. Ingestion: Prolonged or repeated ingestion may affect the liver, kidneys, metabolism (weight loss), endocrine system (spleen), blood (changes in cell count).

---

### Section 12: Ecological Information

**Ecotoxicity:** Ecotoxicity in water (LC50): 43.8 mg/l 96 hours [Trout].

**BOD5 and COD:** Not available.

**Products of Biodegradation:** Possibly hazardous short term degradation products are not likely. However, long term degradation products may arise.

**Toxicity of the Products of Biodegradation:** The products of degradation are as toxic as the product itself.

**Special Remarks on the Products of Biodegradation:** Not available.

---

### Section 13: Disposal Considerations

**Waste Disposal:** Waste must be disposed of in accordance with federal, state and local environmental control regulations.
Section 14: Transport Information

DOT Classification: CLASS 6.1: Poisonous material.
Identification: Chloroform UNNA: UN1888 PG: III
Special Provisions for Transport: Not available.

Section 15: Other Regulatory Information

Federal and State Regulations: California prop. 65: This product contains the following ingredients for which the State of California has found to cause cancer, birth defects or other reproductive harm, which would require a warning under the statute: Chloroform California prop. 65 (no significant risk level): Chloroform: 0.02 mg/day (value) California prop. 65: This product contains the following ingredients for which the State of California has found to cause cancer which would require a warning under the statute: Chloroform New York release reporting list: Chloroform Rhode Island RTK hazardous substances: Chloroform Pennsylvania RTK: Chloroform Massachusetts RTK: Chloroform New Jersey: Chloroform California Director's List of Hazardous Substances (8 CCR 339): Chloroform Tennessee: Chloroform TSCA 8(b) inventory: Chloroform TSCA 8(d) H and S data reporting: Chloroform: effective: 6/1/87; sunset: 6/1/97 SARA 302/304/311/312 extremely hazardous substances: Chloroform SARA 313 toxic chemical notification and release reporting: Chloroform CERCLA: Hazardous substances.: Chloroform: 10 lbs. (4.536 kg)

Other Classifications:
WHMIS (Canada): CLASS D-1A: Material causing immediate and serious toxic effects (VERY TOXIC). CLASS D-2A: Material causing other toxic effects (VERY TOXIC).

HMIS (U.S.A.):
- Health Hazard: 2
- Fire Hazard: 0
- Reactivity: 0
- Personal Protection: h

National Fire Protection Association (U.S.A.):
- Health: 2
- Flammability: 0
- Reactivity: 0
- Specific hazard:

Protective Equipment: Gloves. Lab coat. Vapor respirator. Be sure to use an approved/certified respirator or equivalent. Wear appropriate respirator when ventilation is inadequate. Splash goggles.

Section 16: Other Information

Toxicological Data on Ingredients: Chromium LD50: Not available. LC50: Not available.

Section 3: Hazards Identification

Potential Acute Health Effects:
Hazardous in case of skin contact (irritant), of eye contact (irritant), of inhalation. Slightly hazardous in case of ingestion.

Potential Chronic Health Effects:
CARCINOGENIC EFFECTS: A4 (Not classifiable for human or animal,) by ACGIH, 3 (Not classifiable for human,) by IARC.
MUTAGENIC EFFECTS: Not available. TERATOGENIC EFFECTS: Not available. DEVELOPMENTAL TOXICITY: Not available. The substance may be toxic to kidneys, lungs, liver, upper respiratory tract. Repeated or prolonged exposure to the substance can produce target organs damage.

Section 4: First Aid Measures

Eye Contact:
Check for and remove any contact lenses. In case of contact, immediately flush eyes with plenty of water for at least 15 minutes. Get medical attention.

**Skin Contact:**
In case of contact, immediately flush skin with plenty of water. Cover the irritated skin with an emollient. Remove contaminated clothing and shoes. Wash clothing before reuse. Thoroughly clean shoes before reuse. Get medical attention.

**Serious Skin Contact:**
Wash with a disinfectant soap and cover the contaminated skin with an anti-bacterial cream. Seek medical attention.

**Inhalation:**
If inhaled, remove to fresh air. If not breathing, give artificial respiration. If breathing is difficult, give oxygen. Get medical attention.

**Serious Inhalation:** Not available.

**Ingestion:**
Do NOT induce vomiting unless directed to do so by medical personnel. Never give anything by mouth to an unconscious person. Loosen tight clothing such as a collar, tie, belt or waistband. Get medical attention if symptoms appear.

**Serious Ingestion:** Not available.

---

### Section 5: Fire and Explosion Data

**Flammability of the Product:** May be combustible at high temperature.

**Auto-Ignition Temperature:** 580°C (1076°F)

**Flash Points:** Not available.

**Flammable Limits:** Not available.

**Products of Combustion:** Some metallic oxides.

**Fire Hazards in Presence of Various Substances:**
Slightly flammable to flammable in presence of open flames and sparks, of heat. Non-flammable in presence of shocks.

**Explosion Hazards in Presence of Various Substances:**
Risks of explosion of the product in presence of mechanical impact: Not available. Risks of explosion of the product in presence of static discharge: Not available.

**Fire Fighting Media and Instructions:**
SMALL FIRE: Use DRY chemical powder. LARGE FIRE: Use water spray, fog or foam. Do not use water jet.

**Special Remarks on Fire Hazards:**
Moderate fire hazard when it is in the form of a dust (powder) and burns rapidly when heated in flame. Chromium is attacked vigorously by fused potassium chlorate producing vivid incandescence. Pyrophoric chromium unites with nitric oxide with incandescence. Incandescent reaction with nitrogen oxide or sulfur dioxide.

**Special Remarks on Explosion Hazards:**
Powdered Chromium metal + fused ammonium nitrate may react violently or explosively. Powdered Chromium will explode spontaneously in air.

---

### Section 6: Accidental Release Measures

**Small Spill:**
Use appropriate tools to put the spilled solid in a convenient waste disposal container. Finish cleaning by spreading water on the contaminated surface and dispose of according to local and regional authority requirements.

**Large Spill:**
Use a shovel to put the material into a convenient waste disposal container. Finish cleaning by spreading water on the contaminated surface and allow to evacuate through the sanitary system. Be careful that the product is not present at a concentration level above TLV. Check TLV on the MSDS and with local authorities.
Section 7: Handling and Storage

Precautions:
Keep away from heat. Keep away from sources of ignition. Ground all equipment containing material. Do not ingest. Do not breathe dust. Wear suitable protective clothing. In case of insufficient ventilation, wear suitable respiratory equipment. If ingested, seek medical advice immediately and show the container or the label. Avoid contact with skin and eyes. Keep away from incompatibles such as oxidizing agents, acids, alkalis.

Storage: Keep container tightly closed. Keep container in a cool, well-ventilated area.

Section 8: Exposure Controls/Personal Protection

Engineering Controls:
Use process enclosures, local exhaust ventilation, or other engineering controls to keep airborne levels below recommended exposure limits. If user operations generate dust, fume or mist, use ventilation to keep exposure to airborne contaminants below the exposure limit.

Personal Protection:
Splash goggles. Lab coat. Dust respirator. Be sure to use an approved/certified respirator or equivalent. Gloves.

Personal Protection in Case of a Large Spill:
Splash goggles. Full suit. Dust respirator. Boots. Gloves. A self contained breathing apparatus should be used to avoid inhalation of the product. Suggested protective clothing might not be sufficient; consult a specialist BEFORE handling this product.

Exposure Limits:
TWA: 0.5 (mg/m3) from ACGIH (TLV) [United States] TWA: 1 (mg/m3) from OSHA (PEL) [United States] TWA: 0.5 (mg/m3) from NIOSH [United States] TWA: 0.5 (mg/m3) [United Kingdom (UK)] TWA: 0.5 (mg/m3) [Canada] Consult local authorities for acceptable exposure limits.

Section 9: Physical and Chemical Properties

Physical state and appearance: Solid. (Metal solid.)

Odor: Odorless.

Taste: Not available.

Molecular Weight: 52 g/mole

Color: Silver-white to Grey.

pH (1% soln/water): Not applicable.

Boiling Point: 2642°C (4787.6°F)

Melting Point: 1900°C (3452°F) +/- 10 deg. C

Critical Temperature: Not available.

Specific Gravity: 7.14 (Water = 1)

Vapor Pressure: Not applicable.

Vapor Density: Not available.

Volatility: Not available.

Odor Threshold: Not available.

Water/Oil Dist. Coeff.: Not available.

Ionicity (in Water): Not available.
Dispersion Properties: Not available.

Solubility:
Insoluble in cold water, hot water. Soluble in acids (except Nitric), and strong alkalis.

Section 10: Stability and Reactivity Data

Stability: The product is stable.
Instability Temperature: Not available.
Conditions of Instability: Excess heat, incompatible materials
Incompatibility with various substances: Reactive with oxidizing agents, acids, alkalis.
Corrosivity: Not available.
SpecialRemarks on Reactivity:
Incompatible with molten Lithium at 180 deg. C, hydrogen peroxide, hydrochloric acid, sulfuric acid, most caustic alkalis and alkali carbonates, potassium chlorate, sulfur dioxide, nitrogen oxide, bromine pentafluoride. It may react violently or ignite with bromine pentafluoride. Chromium is rapidly attacked by fused sodium hydroxide + potassium nitrate. Potentially hazardous incompatibility with strong oxidizers.
Special Remarks on Corrosivity: Not available.
Polymerization: Will not occur.

Section 11: Toxicological Information

Routes of Entry: Inhalation. Ingestion.
Toxicity to Animals:
LD50: Not available. LC50: Not available.
Chronic Effects on Humans:
CARCINOGENIC EFFECTS: A4 (Not classifiable for human or animal.) by ACGIH, 3 (Not classifiable for human.) by IARC. May cause damage to the following organs: kidneys, lungs, liver, upper respiratory tract.
Other Toxic Effects on Humans:
Hazardous in case of skin contact (irritant), of inhalation. Slightly hazardous in case of ingestion.
Special Remarks on Toxicity to Animals: Not available.
Special Remarks on Chronic Effects on Humans:
May cause cancer based on animal data. There is no evidence that exposure to trivalent chromium causes cancer in man.
Special Remarks on other Toxic Effects on Humans:
Acute Potential Health Effects: May cause skin irritation. Eyes: May cause mechanical eye irritation. Inhalation: May cause irritation of the respiratory tract and mucus membranes of the respiratory tract. Ingestion: May cause gastrointestinal tract irritation with nausea, vomiting, diarrhea. Chronic Potential Health Effects: Inhalation: The effects of chronic exposure include irritation, sneezing, reddness of the throat, bronchospasm, asthma, cough, polyps, chronic inflammation, emphysema, chronic bronchitis, pharyngitis, bronchopneumonia, pneumoconiosis. Effects on the nose from chronic chromium exposure include irritation, ulceration, and perforation of the nasal septum. Inflammation and ulceration of the larynx may also occur. Ingestion or Inhalation: Chronic exposure may cause liver and kidney damage.

Section 12: Ecological Information

Ecotoxicity: Not available.
BOD5 and COD: Not available.
**Products of Biodegradation:**
Possibly hazardous short term degradation products are not likely. However, long term degradation products may arise.

**Toxicity of the Products of Biodegradation:** The product itself and its products of degradation are not toxic.

**Special Remarks on the Products of Biodegradation:** Not available.

---

**Section 13: Disposal Considerations**

**Waste Disposal:**
Waste must be disposed of in accordance with federal, state and local environmental control regulations.

---

**Section 14: Transport Information**

**DOT Classification:** Not a DOT controlled material (United States).

**Identification:** Not applicable.

**Special Provisions for Transport:** Not applicable.

---

**Section 15: Other Regulatory Information**

**Federal and State Regulations:**

**Other Regulations:**

**Other Classifications:**
WHMIS (Canada): Not controlled under WHMIS (Canada).

**DSCL (EEC):**
R40- Limited evidence of carcinogenic effect S36/37/39- Wear suitable protective clothing, gloves and eye/face protection. S45- In case of accident or if you feel unwell, seek medical advice immediately (show the label where possible).

**HMIS (U.S.A.):**
- **Health Hazard:** 2
- **Fire Hazard:** 1
- **Reactivity:** 0
- **Personal Protection:** E

**National Fire Protection Association (U.S.A.):**
- **Health:** 2
- **Flammability:** 1
- **Reactivity:** 0
- **Specific hazard:**
Protective Equipment:
Gloves. Lab coat. Dust respirator. Be sure to use an approved/certified respirator or equivalent. Splash goggles.

Section 3 - Hazards Identification

EMERGENCY OVERVIEW

Appearance: off-white solid.
Caution! May cause eye and skin irritation. May cause respiratory tract irritation. Cancer suspect agent.
Target Organs: None known.

Potential Health Effects
Eye: May cause eye irritation.
Skin: May cause skin irritation.
Ingestion: May cause irritation of the digestive tract.
Inhalation: May cause respiratory tract irritation.
Chronic: May cause cancer in humans.

Section 4 - First Aid Measures

Eyes: Flush eyes with plenty of water for at least 15 minutes, occasionally lifting the upper and lower eyelids. Get medical aid.
Skin: Get medical aid. Flush skin with plenty of water for at least 15 minutes while removing contaminated clothing and shoes. Wash clothing before reuse. Remove contaminated clothing and shoes.
Ingestion: Get medical aid. Do NOT induce vomiting. If conscious and alert, rinse mouth and wash

https://fscimage.fishersci.com/msds/66416.htm 2/24/2017
drink 2-4 cupfuls of milk or water.

**Inhalation:** Remove from exposure and move to fresh air immediately. If not breathing, give artificial respiration. If breathing is difficult, give oxygen. Get medical aid.

**Notes to Physician:** Treat symptomatically and supportively.

### Section 5 - Fire Fighting Measures

**General Information:** As in any fire, wear a self-contained breathing apparatus in pressure-demand, MSHA/NIOSH (approved or equivalent), and full protective gear. During a fire, irritating and highly toxic gases may be generated by thermal decomposition or combustion.

**Extinguishing Media:** Use agent most appropriate to extinguish fire. Use water spray, dry chemical, carbon dioxide, or appropriate foam.

**Flash Point:** Not applicable.

**Autoignition Temperature:** Not applicable.

**Explosion Limits, Lower:** Not available.

**Upper:** Not available.

**NFPA Rating:** (estimated) Health: 1; Flammability: 1; Instability: 0

### Section 6 - Accidental Release Measures

**General Information:** Use proper personal protective equipment as indicated in Section 8.

**Spills/Leaks:** Vacuum or sweep up material and place into a suitable disposal container. Clean up spills immediately, observing precautions in the Protective Equipment section. Avoid generating dusty conditions. Provide ventilation.

### Section 7 - Handling and Storage

**Handling:** Wash thoroughly after handling. Remove contaminated clothing and wash before reuse. Use with adequate ventilation. Minimize dust generation and accumulation. Avoid contact with eyes, skin, and clothing. Keep container tightly closed. Avoid ingestion and inhalation.

**Storage:** Store in a tightly closed container. Store in a cool, dry, well-ventilated area away from incompatible substances.

### Section 8 - Exposure Controls, Personal Protection

**Engineering Controls:** Facilities storing or utilizing this material should be equipped with an eyewash facility and a safety shower. Use adequate ventilation to keep airborne concentrations low.

**Exposure Limits**

**OSHA Vacated PELs:** Dibenz[a,h]anthracene: No OSHA Vacated PELs are listed for this chemical.

**Personal Protective Equipment**

---

https://fscimage.fishersci.com/msds/66416.htm

2/24/2017
Eyes: Wear appropriate protective eyeglasses or chemical safety goggles as described by OSHA's eye and face protection regulations in 29 CFR 1910.133 or European Standard EN166.

Skin: Wear appropriate protective gloves to prevent skin exposure.

Clothing: Wear appropriate protective clothing to prevent skin exposure.

Respirators: A respiratory protection program that meets OSHA's 29 CFR 1910.134 and ANSI Z88.2 requirements or European Standard EN 149 must be followed whenever workplace conditions warrant respirator use.

---

**Section 9 - Physical and Chemical Properties**

Physical State: Solid
Appearance: off-white
Odor: Not available.

pH: Not available.

Vapor Pressure: Not available.

Vapor Density: Not available.

Evaporation Rate: Not available.

Viscosity: Not available.

Boiling Point: Not available.

Freezing/Melting Point: 265 deg C

Decomposition Temperature: Not available.

Solubility: Not available.

Specific Gravity/Density: Not available.

Molecular Formula: C22H14

Molecular Weight: 278.34

---

**Section 10 - Stability and Reactivity**

Chemical Stability: Stable under normal temperatures and pressures.

Conditions to Avoid: Incompatible materials, dust generation, excess heat, strong oxidants.

Incompatibilities with Other Materials: Oxidizing agents.

Hazardous Decomposition Products: Carbon monoxide, carbon monoxide, carbon dioxide.

Hazardous Polymerization: Has not been reported

**Section 15 - Regulatory Information**

**US FEDERAL**

**TSCA**
CAS# 53-70-3 is listed on the TSCA inventory.

**Health & Safety Reporting List**
None of the chemicals are on the Health & Safety Reporting List.
Chemical Test Rules
None of the chemicals in this product are under a Chemical Test Rule.

Section 12b
None of the chemicals are listed under TSCA Section 12b.

TSCA Significant New Use Rule
None of the chemicals in this material have a SNUR under TSCA.

CERCLA Hazardous Substances and corresponding RQs
CAS# 53-70-3: 1 lb final RQ; 0.454 kg final RQ

SARA Section 302 Extremely Hazardous Substances
None of the chemicals in this product have a TPQ.

Section 313
This material contains Diben[a,h]anthracene (CAS# 53-70-3, 99%), which is subject to the reporting requirements of Section 313 of SARA Title III and 40 CFR

Clean Air Act:
This material does not contain any hazardous air pollutants.
This material does not contain any Class 1 Ozone depleters.
This material does not contain any Class 2 Ozone depleters.

Clean Water Act:
None of the chemicals in this product are listed as Hazardous Substances under the CWA.
CAS# 53-70-3 is listed as a Priority Pollutant under the Clean Water Act.
None of the chemicals in this product are listed as Toxic Pollutants under the CWA.

OSHA:
None of the chemicals in this product are considered highly hazardous by OSHA.

STATE
CAS# 53-70-3 can be found on the following state right to know lists: California, New Jersey, Pennsylvania, Minnesota, Massachusetts.

California Prop 65
The following statement(s) is(are) made in order to comply with the California Safe Drinking Water Act:
WARNING: This product contains Diben[a,h]anthracene, a chemical known to the state of California to cause cancer.
California No Significant Risk Level: CAS# 53-70-3: 0.2 æg/day NSRL

European/International Regulations
European Labeling in Accordance with EC Directives
Hazard Symbols:
- T
- N

Risk Phrases:
- R 45 May cause cancer.
- R 50/53 Very toxic to aquatic organisms, may cause long-term adverse effects in the aquatic environment.

Safety Phrases:
- S 45 In case of accident or if you feel unwell, seek medical advice immediately (show the label where possible).
- S 53 Avoid exposure - obtain special instructions before use.
- S 60 This material and its container must be disposed of as hazardous waste.
- S 61 Avoid release to the environment. Refer to special instructions /safety data sheets.

WGK (Water Danger/Protection)
CAS# 53-70-3: No information available.

Canada - DSL/NDSL
CAS# 53-70-3 is listed on Canada's NDSL List.

Canada - WHMIS
This product has a WHMIS classification of D2A.
This product has been classified in accordance with the hazard criteria of the Controlled Products Regulations and the MSDS contains all of the information required by those regulations.

Canadian Ingredient Disclosure List
CAS# 53-70-3 is listed on the Canadian Ingredient Disclosure List.

Section 16 - Additional Information

MSDS Creation Date: 6/24/1999
Revision #5 Date: 11/20/2008

4. FIRST AID MEASURES

4.1 Description of first aid measures

General advice
Consult a physician. Show this safety data sheet to the doctor in attendance.

If inhaled
If breathed in, move person into fresh air. If not breathing, give artificial respiration. Consult a physician.

In case of skin contact
Wash off with soap and plenty of water. Consult a physician.

In case of eye contact
Flush eyes with water as a precaution.

If swallowed
Never give anything by mouth to an unconscious person. Rinse mouth with water. Consult a physician.

4.2 Most important symptoms and effects, both acute and delayed

4.3 Indication of immediate medical attention and special treatment needed
no data available

5. FIRE-FIGHTING MEASURES

5.1 Extinguishing media

Suitable extinguishing media
Use water spray, alcohol-resistant foam, dry chemical or carbon dioxide.

5.2 Special hazards arising from the substance or mixture

Carbon oxides

5.3 Precautions for fire-fighters

Wear self contained breathing apparatus for fire fighting if necessary.

5.4 Further information
no data available

6. ACCIDENTAL RELEASE MEASURES

6.1 Personal precautions, protective equipment and emergency procedures

Use personal protective equipment. Avoid dust formation. Avoid breathing vapors, mist or gas. Ensure adequate ventilation. Evacuate personnel to safe areas. Avoid breathing dust.

6.2 Environmental precautions

Prevent further leakage or spillage if safe to do so. Do not let product enter drains.

6.3 Methods and materials for containment and cleaning up

Pick up and arrange disposal without creating dust. Sweep up and shovel. Keep in suitable, closed containers for disposal.

6.4 Reference to other sections

For disposal see section 13.

7. HANDLING AND STORAGE

7.1 Precautions for safe handling

Avoid contact with skin and eyes. Avoid formation of dust and aerosols.
Provide appropriate exhaust ventilation at places where dust is formed. Normal measures for preventive fire protection.

7.2 Conditions for safe storage, including any incompatibilities

Store in cool place. Keep container tightly closed in a dry and well-ventilated place.

7.3 Specific end uses

no data available

8. EXPOSURE CONTROLS/PERSOAL PROTECTION

8.1 Control parameters

Components with workplace control parameters

8.2 Exposure controls

Appropriate engineering controls
Handle in accordance with good industrial hygiene and safety practice. Wash hands before breaks and at the end of workday.

**Personal protective equipment**

**Eye/face protection**
Safety glasses with side-shields conforming to EN166 Use equipment for eye protection tested and approved under appropriate government standards such as NIOSH (US) or EN 166(EU).

**Skin protection**
Handle with gloves. Gloves must be inspected prior to use. Use proper glove removal technique (without touching glove’s outer surface) to avoid skin contact with this product. Dispose of contaminated gloves after use in accordance with applicable laws and good laboratory practices. Wash and dry hands.

The selected protective gloves have to satisfy the specifications of EU Directive 89/686/EEC and the standard EN 374 derived from it.

**Body Protection**
Impervious clothing. The type of protective equipment must be selected according to the concentration and amount of the dangerous substance at the specific workplace.

**Respiratory protection**
Where risk assessment shows air-purifying respirators are appropriate use a full-face particle respirator type N100 (US) or type P3 (EN 143) respirator cartridges as a backup to engineering controls. If the respirator is the sole means of protection, use a full-face supplied air respirator. Use respirators and components tested and approved under appropriate government standards such as NIOSH (US) or CEN (EU).

9. **PHYSICAL AND CHEMICAL PROPERTIES**

9.1 **Information on basic physical and chemical properties**

a) Appearance
   Form: solid

b) Odour
   no data available

c) Odour Threshold
   no data available

d) pH
   no data available

e) Melting/freezing point
   163.6 °C

f) Initial boiling point and boiling range
   536.0 °C

g) Flash point
   no data available

h) Evaporation rate
   no data available

i) Flammability (solid, gas)
   no data available

j) Upper/lower flammability or explosive limits
   no data available

k) Vapour pressure
   no data available

l) Vapour density
   no data available

m) Relative density
   no data available

n) Water solubility
   no data available

o) Partition coefficient: n-octanol/water
   no data available

p) Autoignition temperature
   no data available

q) Decomposition temperature
   no data available

r) Viscosity
   no data available

s) Explosive properties
   no data available

t) Oxidizing properties
   no data available

9.2 **Other safety information**
10. STABILITY AND REACTIVITY

10.1 Reactivity
no data available

10.2 Chemical stability
no data available

10.3 Possibility of hazardous reactions
no data available

10.4 Conditions to avoid
no data available

10.5 Incompatible materials
Strong oxidizing agents

10.6 Hazardous decomposition products
Other decomposition products - no data available

11. TOXICOLOGICAL INFORMATION

11.1 Information on toxicological effects

Acute toxicity
no data available

Skin corrosion/irritation
no data available

Serious eye damage/eye irritation
no data available

Respiratory or skin sensitization
no data available

Germ cell mutagenicity
no data available

Carcinogenicity
This product is or contains a component that has been reported to be possibly carcinogenic based on its
IARC, ACGIH, NTP, or EPA classification.

Limited evidence of carcinogenicity in animal studies

IARC: 2B - Group 2B: Possibly carcinogenic to humans (Indeno[1,2,3-cd]pyrene)

Reproductive toxicity
no data available

Specific target organ toxicity - single exposure
no data available

Specific target organ toxicity - repeated exposure
no data available

Aspiration hazard
no data available

Potential health effects

Additional Information
RTECS: Not available

12. ECOLOGICAL INFORMATION
12.1 Toxicity
no data available

12.2 Persistence and degradability
no data available

12.3 Bioaccumulative potential
no data available

12.4 Mobility in soil
no data available

12.5 Results of PBT and vPvB assessment
no data available

12.6 Other adverse effects
no data available

13. DISPOSAL CONSIDERATIONS

13.1 Waste treatment methods

Product
Offer surplus and non-recyclable solutions to a licensed disposal company. Contact a licensed professional waste disposal service to dispose of this material. Dissolve or mix the material with a combustible solvent and burn in a chemical incinerator equipped with an afterburner and scrubber.

Contaminated packaging
Dispose of as unused product.

14. TRANSPORT INFORMATION

14.1 UN-Number

ADR/RID: -  IMDG: -  IATA: -

14.2 UN proper shipping name

ADR/RID: Not dangerous goods
IMDG: Not dangerous goods
IATA: Not dangerous goods

14.3 Transport hazard class(es)

ADR/RID: -  IMDG: -  IATA: -

14.4 Packaging group

ADR/RID: -  IMDG: -  IATA: -

14.5 Environmental hazards

ADR/RID: no  IMDG Marine pollutant: no  IATA: no

14.6 Special precautions for users
no data available

15. REGULATORY INFORMATION

This safety datasheet complies with the requirements of Regulation (EC) No. 1907/2006.

15.1 Safety, health and environmental regulations/legislation specific for the substance or mixture
no data available

15.2 Chemical Safety Assessment
no data available

16. OTHER INFORMATION

Further information

The above information is believed to be correct but does not purport to be all inclusive and shall be used only as a guide. The information this document is based on the resent state of our knowledge and is applicable to the product with regard to appropriate safety precautions. It does not represent any guarantee of the properties of the product. guidechem shall not be held liable for any damage resulting from handling or from contact with the above product.

Toxicological Data on Ingredients: Lead LD50: Not available. LC50: Not available.

Section 3: Hazards Identification

Potential Acute Health Effects: Slightly hazardous in case of skin contact (irritant), of eye contact (irritant), of ingestion, of inhalation.

Potential Chronic Health Effects:
Slightly hazardous in case of skin contact (permeator). CARCINOGENIC EFFECTS: Classified A3 (Proven for animal.) by ACGIH, 2B (Possible for human.) by IARC. MUTAGENIC EFFECTS: Not available. TERATOGENIC EFFECTS: Not available. DEVELOPMENTAL TOXICITY: Not available. The substance may be toxic to blood, kidneys, central nervous system (CNS). Repeated or prolonged exposure to the substance can produce target organs damage.

Section 4: First Aid Measures

Eye Contact:
Check for and remove any contact lenses. In case of contact, immediately flush eyes with plenty of water for at least 15 minutes. Get medical attention if irritation occurs.

Skin Contact: Wash with soap and water. Cover the irritated skin with an emollient. Get medical attention if irritation develops.

Serious Skin Contact: Not available.

Inhalation:
If inhaled, remove to fresh air. If not breathing, give artificial respiration. If breathing is difficult, give oxygen. Get medical attention.

Serious Inhalation: Not available.

Ingestion:
Do NOT induce vomiting unless directed to do so by medical personnel. Never give anything by mouth to an unconscious person. If large quantities of this material are swallowed, call a physician immediately. Loosen tight clothing such as a collar, tie, belt or waistband.

Serious Ingestion: Not available.

---

**Section 5: Fire and Explosion Data**

Flammability of the Product: May be combustible at high temperature.

Auto-Ignition Temperature: Not available.

Flash Points: Not available.

Flammable Limits: Not available.

Products of Combustion: Some metallic oxides.

Fire Hazards in Presence of Various Substances: Non-flammable in presence of open flames and sparks, of shocks, of heat.

Explosion Hazards in Presence of Various Substances:
Risks of explosion of the product in presence of mechanical impact: Not available. Risks of explosion of the product in presence of static discharge: Not available.

Fire Fighting Media and Instructions:
SMALL FIRE: Use DRY chemical powder. LARGE FIRE: Use water spray, fog or foam. Do not use water jet.

Special Remarks on Fire Hazards: When heated to decomposition it emits highly toxic fumes of lead.

Special Remarks on Explosion Hazards: Not available.

---

**Section 6: Accidental Release Measures**

Small Spill:
Use appropriate tools to put the spilled solid in a convenient waste disposal container. Finish cleaning by spreading water on the contaminated surface and dispose of according to local and regional authority requirements.

Large Spill:
Use a shovel to put the material into a convenient waste disposal container. Finish cleaning by spreading water on the contaminated surface and allow to evacuate through the sanitary system. Be careful that the product is not present at a concentration level above TLV. Check TLV on the MSDS and with local authorities.

---

**Section 7: Handling and Storage**

Precautions:
Keep locked up. Keep away from heat. Keep away from sources of ignition. Empty containers pose a fire risk, evaporate the residue under a fume hood. Ground all equipment containing material. Do not ingest. Do not breathe dust. Wear suitable
protective clothing. If ingested, seek medical advice immediately and show the container or the label. Keep away from incompatibles such as oxidizing agents.

**Storage:** Keep container tightly closed. Keep container in a cool, well-ventilated area.

### Section 8: Exposure Controls/Personal Protection

**Engineering Controls:**
Use process enclosures, local exhaust ventilation, or other engineering controls to keep airborne levels below recommended exposure limits. If user operations generate dust, fume or mist, use ventilation to keep exposure to airborne contaminants below the exposure limit.

**Personal Protection:** Safety glasses. Lab coat. Dust respirator. Be sure to use an approved/certified respirator or equivalent. Gloves.

**Personal Protection in Case of a Large Spill:**
Splash goggles. Full suit. Dust respirator. Boots. Gloves. A self contained breathing apparatus should be used to avoid inhalation of the product. Suggested protective clothing might not be sufficient; consult a specialist BEFORE handling this product.

**Exposure Limits:**
TWA: 0.05 (mg/m³) from ACGIH (TLV) [United States] TWA: 0.05 (mg/m³) from OSHA (PEL) [United States] TWA: 0.03 (mg/m³) from NIOSH [United States] TWA: 0.05 (mg/m³) [Canada] Consult local authorities for acceptable exposure limits.

### Section 9: Physical and Chemical Properties

**Physical state and appearance:** Solid. (Metal solid.)

**Odor:** Not available.

**Taste:** Not available.

**Molecular Weight:** 207.21 g/mole

**Color:** Bluish-white. Silvery. Gray

**pH (1% soln/water):** Not applicable.

**Boiling Point:** 1740°C (3164°F)

**Melting Point:** 327.43°C (621.4°F)

**Critical Temperature:** Not available.

**Specific Gravity:** 11.3 (Water = 1)

**Vapor Pressure:** Not applicable.

**Vapor Density:** Not available.

**Volatility:** Not available.

**Odor Threshold:** Not available.

**Water/Oil Dist. Coeff.:** Not available.

**Ionicity (in Water):** Not available.

**Dispersion Properties:** Not available.

**Solubility:** Insoluble in cold water.

### Section 10: Stability and Reactivity Data
Stability: The product is stable.

Instability Temperature: Not available.

Conditions of Instability: Incompatible materials, excess heat

Incompatibility with various substances: Reactive with oxidizing agents.

Corrosivity: Non-corrosive in presence of glass.

Special Remarks on Reactivity:
Can react vigorously with oxidizing materials. Incompatible with sodium carbide, chlorine trifluoride, trioxane + hydrogen peroxide, ammonium nitrate, sodium azide, disodium acetylide, sodium acetylide, hot concentrated nitric acid, hot concentrated hydrochloric acid, hot concentrated sulfuric acid, zirconium.

Special Remarks on Corrosivity: Not available.

Polymerization: Will not occur.

Section 11: Toxicological Information

Routes of Entry: Absorbed through skin. Inhalation. Ingestion.

Toxicity to Animals:
LD50: Not available. LC50: Not available.

Chronic Effects on Humans:
CARCINOGENIC EFFECTS: Classified A3 (Proven for animal.) by ACGIH, 2B (Possible for human.) by IARC. May cause damage to the following organs: blood, kidneys, central nervous system (CNS).

Other Toxic Effects on Humans: Slightly hazardous in case of skin contact (irritant), of ingestion, of inhalation.

Special Remarks on Toxicity to Animals: Not available.

Special Remarks on Chronic Effects on Humans: Not available.

Special Remarks on other Toxic Effects on Humans:
Acute Potential: Skin: Lead metal granules or dust: May cause skin irritation by mechanical action. Lead metal foil, shot or sheets: Not likely to cause skin irritation Eyes: Lead metal granules or dust: Can irritate eyes by mechanical action. Lead metal foil, shot or sheets: No hazard. Will not cause eye irritation. Inhalation: In an industrial setting, exposure to lead mainly occurs from inhalation of dust or fumes. Lead dust or fumes: Can irritate the upper respiratory tract (nose, throat) as well as the bronchi and lungs by mechanical action. Lead dust can be absorbed through the respiratory system. However, inhaled lead does not accumulate in the lungs. All of an inhaled dose is eventually absorbed or transferred to the gastrointestinal tract. Inhalation effects of exposure to fumes or dust of inorganic lead may not develop quickly. Symptoms may include metallic taste, chest pain, decreased physical fitness, fatigue, sleep disturbance, headache, irritability, reduces memory, mood and personality changes, aching bones and muscles, constipation, abdominal pains, decreasing appetite. Inhalation of large amounts may lead to ataxia, delirium, convulsions/seizures, coma, and death. Lead metal foil, shot, or sheets: Not an inhalation hazard unless metal is heated. If metal is heated, fumes will be released. Inhalation of these fumes may cause "fume metal fever", which is characterized by flu-like symptoms. Symptoms may include metallic taste, fever, nausea, vomiting, chills, cough, weakness, chest pain, generalized muscle pain/aches, and increased white blood cell count. Ingestion: Lead metal granules or dust: The symptoms of lead poisoning include abdominal pain or cramps (lead cholic), spasms, nausea, vomiting, headache, muscle weakness, hallucinations, distorted perceptions, "lead line" on the gums, metallic taste, loss of appetite, insomnia, dizziness and other symptoms similar to that of inhalation. Acute poisoning may result in high lead levels in the blood and urine, shock, coma and death in extreme cases. Lead metal foil, shot or sheets: Not an ingestion hazard for usual industrial handling.

Section 12: Ecological Information

Ecotoxicity: Not available.

BOD5 and COD: Not available.
Products of Biodegradation:
Possibly hazardous short term degradation products are not likely. However, long term degradation products may arise.

Toxicity of the Products of Biodegradation: The products of degradation are less toxic than the product itself.

Special Remarks on the Products of Biodegradation: Not available.

Section 13: Disposal Considerations

Waste Disposal:
Waste must be disposed of in accordance with federal, state and local environmental control regulations.

Section 14: Transport Information

DOT Classification: Not a DOT controlled material (United States).
Identification: Not applicable.
Special Provisions for Transport: Not applicable.

Section 15: Other Regulatory Information

Federal and State Regulations:
California prop. 65: This product contains the following ingredients for which the State of California has found to cause cancer, birth defects or other reproductive harm, which would require a warning under the statute: Lead California prop. 65: This product contains the following ingredients for which the State of California has found to cause reproductive harm (female) which would require a warning under the statute: Lead California prop. 65: This product contains the following ingredients for which the State of California has found to cause reproductive harm (male) which would require a warning under the statute: Lead California prop. 65 (no significant risk level): Lead: 0.0005 mg/day (value) California prop. 65: This product contains the following ingredients for which the State of California has found to cause birth defects which would require a warning under the statute: Lead California prop. 65: This product contains the following ingredients for which the State of California has found to cause cancer which would require a warning under the statute: Lead Connecticut hazardous material survey.: Lead Illinois toxic substances disclosure to employee act: Lead Illinois chemical safety act: Lead New York release reporting list: Lead Rhode Island RTK hazardous substances: Lead Pennsylvania RTK: Lead

Other Regulations:

Other Classifications:
WHMIS (Canada): CLASS D-2A: Material causing other toxic effects (VERY TOXIC).

DSCL (EEC):
R20/22- Harmful by inhalation and if swallowed. R33- Danger of cumulative effects. R61- May cause harm to the unborn child. R62- Possible risk of impaired fertility. S36/37- Wear suitable protective clothing and gloves. S44- If you feel unwell, seek medical advice (show the label when possible). S53- Avoid exposure - obtain special instructions before use.

HMIS (U.S.A.):
Health Hazard: 1
Fire Hazard: 0
Reactivity: 0
Personal Protection: E

National Fire Protection Association (U.S.A.):
Health: 1
Flammability: 0
Reactivity: 0
Specific hazard:

Protective Equipment:
Gloves. Lab coat. Dust respirator. Be sure to use an approved/certified respirator or equivalent. Wear appropriate respirator when ventilation is inadequate. Safety glasses.

Section 16: Other Information

References: Not available.

Other Special Considerations: Not available.

Toxicological Data on Ingredients: Mercury LD50: Not available. LC50: Not available.

Section 3: Hazards Identification

Potential Acute Health Effects:
Very hazardous in case of skin contact (irritant), of eye contact (irritant), of ingestion, of inhalation. Hazardous in case of skin contact (corrosive, permeator). Liquid or spray mist may produce tissue damage particularly on mucous membranes of eyes, mouth and respiratory tract. Skin contact may produce burns. Inhalation of the spray mist may produce severe irritation of respiratory tract, characterized by coughing, choking, or shortness of breath. Severe over-exposure can result in death. Inflammation of the eye is characterized by redness, watering, and itching. Skin inflammation is characterized by itching, scaling, reddening, or, occasionally, blistering.

Potential Chronic Health Effects:
Hazardous in case of skin contact (permeator). CARCINOGENIC EFFECTS: Classified A5 (Not suspected for human.) by ACGIH. 3 (Not classifiable for human.) by IARC. MUTAGENIC EFFECTS: Not available. TERATOGENIC EFFECTS: Not available. DEVELOPMENTAL TOXICITY: Not available. The substance may be toxic to blood, kidneys, liver, brain, peripheral nervous system, central nervous system (CNS). Repeated or prolonged exposure to the substance can produce target organs damage. Repeated or prolonged contact with spray mist may produce chronic eye irritation and severe skin irritation.
Repeated or prolonged exposure to spray mist may produce respiratory tract irritation leading to frequent attacks of bronchial infection. Repeated exposure to a highly toxic material may produce general deterioration of health by an accumulation in one or many human organs.

### Section 4: First Aid Measures

**Eye Contact:**
Check for and remove any contact lenses. In case of contact, immediately flush eyes with plenty of water for at least 15 minutes. Cold water may be used. WARM water MUST be used. Get medical attention immediately.

**Skin Contact:**
In case of contact, immediately flush skin with plenty of water for at least 15 minutes while removing contaminated clothing and shoes. Cover the irritated skin with an emollient. Wash clothing before reuse. Thoroughly clean shoes before reuse. Get medical attention immediately.

**Serious Skin Contact:**
Wash with a disinfectant soap and cover the contaminated skin with an anti-bacterial cream. Seek immediate medical attention.

**Inhalation:**
If inhaled, remove to fresh air. If not breathing, give artificial respiration. If breathing is difficult, give oxygen. Get medical attention immediately.

**Serious Inhalation:**
Evacuate the victim to a safe area as soon as possible. Loosen tight clothing such as a collar, tie, belt or waistband. If breathing is difficult, administer oxygen. If the victim is not breathing, perform mouth-to-mouth resuscitation. WARNING: It may be hazardous to the person providing aid to give mouth-to-mouth resuscitation when the inhaled material is toxic, infectious or corrosive. Seek immediate medical attention.

**Ingestion:**
Do NOT induce vomiting unless directed to do so by medical personnel. Never give anything by mouth to an unconscious person. If large quantities of this material are swallowed, call a physician immediately. Loosen tight clothing such as a collar, tie, belt or waistband.

**Serious Ingestion:**
Not available.

### Section 5: Fire and Explosion Data

**Flammability of the Product:** Non-flammable.

**Auto-Ignition Temperature:** Not applicable.

**Flash Points:** Not applicable.

**Flammable Limits:** Not applicable.

**Products of Combustion:** Not available.

**Fire Hazards in Presence of Various Substances:** Not applicable.

**Explosion Hazards in Presence of Various Substances:**
Risks of explosion of the product in presence of mechanical impact: Not available. Risks of explosion of the product in presence of static discharge: Not available.

**Fire Fighting Media and Instructions:** Not applicable.

**Special Remarks on Fire Hazards:**
When thrown into mercury vapor, boron phosphodiiodide ignites at once. Flame forms with chlorine jet over mercury surface at 200 deg to 300 deg C. Mercury undergoes hazardous reactions in the presence of heat and sparks or ignition.

**Special Remarks on Explosion Hazards:**
A violent exothermic reaction or possible explosion occurs when mercury comes in contact with lithium and rubidium. CHLORINE DIOXIDE & LIQUID HG, WHEN MIXED, EXPLODE VIOLENTLY. Mercury and Ammonia can produce an
explosive compound. A mixture of the dry carbonyl and oxygen will explode on vigorous shaking with mercury. Methyl azide in the presence of mercury was shown to be potentially explosive.

---

### Section 6: Accidental Release Measures

**Small Spill:** Absorb with an inert material and put the spilled material in an appropriate waste disposal.

**Large Spill:**
- Corrosive liquid. Poisonous liquid. Stop leak if without risk. Absorb with DRY earth, sand or other non-combustible material.
- Do not get water inside container. Do not touch spilled material. Use water spray curtain to divert vapor drift. Use water spray to reduce vapors. Prevent entry into sewers, basements or confined areas; dike if needed. Call for assistance on disposal. Be careful that the product is not present at a concentration level above TLV. Check TLV on the MSDS and with local authorities.

---

### Section 7: Handling and Storage

**Precautions:**
- Keep locked up. Keep container dry. Do not ingest. Do not breathe gas/fumes/vapor/spray. Never add water to this product.
- In case of insufficient ventilation, wear suitable respiratory equipment. If ingested, seek medical advice immediately and show the container or the label. Avoid contact with skin and eyes. Keep away from incompatibles such as oxidizing agents, metals.

**Storage:** Keep container tightly closed. Keep container in a cool, well-ventilated area. Do not store above 25°C (77°F).

---

### Section 8: Exposure Controls/Personal Protection

**Engineering Controls:**
- Provide exhaust ventilation or other engineering controls to keep the airborne concentrations of vapors below their respective threshold limit value. Ensure that eyewash stations and safety showers are proximal to the work-station location.

**Personal Protection:**

**Personal Protection in Case of a Large Spill:**
- Splash goggles. Full suit. Vapor respirator. Boots. Gloves. A self contained breathing apparatus should be used to avoid inhalation of the product. Suggested protective clothing might not be sufficient; consult a specialist BEFORE handling this product.

**Exposure Limits:**
- TWA: 0.025 from ACGIH (TLV) [United States]
- SKIN TWA: 0.05 CEIL: 0.1 (mg/m3) from OSHA (PEL) [United States]
- Inhalation TWA: 0.025 (mg/m3) [United Kingdom (UK)] Consult local authorities for acceptable exposure limits.

---

### Section 9: Physical and Chemical Properties

**Physical state and appearance:** Liquid. (Heavy liquid)

**Odor:** Odorless.

**Taste:** Not available.

**Molecular Weight:** 200.59 g/mole

**Color:** Silver-white

**pH (1% soln/water):** Not available.

**Boiling Point:** 356.73°C (674.1°F)

**Melting Point:** -38.87°C (-38°F)

**Critical Temperature:** 1462°C (2663.6°F)
Specific Gravity: 13.55 (Water = 1)
Vapor Pressure: Not available.
Vapor Density: 6.93 (Air = 1)
Volatile: Not available.
Odor Threshold: Not available.
Water/Oil Dist. Coeff.: Not available.
Ionicity (in Water): Not available.
Dispersion Properties: Not available.
Solubility: Very slightly soluble in cold water.

Section 10: Stability and Reactivity Data

Stability: The product is stable.
Instability Temperature: Not available.
Conditions of Instability: Incompatible materials
Incompatibility with various substances: Reactive with oxidizing agents, metals.
Corrosivity: Non-corrosive in presence of glass.
Special Remarks on Reactivity:
Ground mixtures of sodium carbide and mercury, aluminum, lead, or iron can react vigorously. A violent exothermic reaction or possible explosion occurs when mercury comes in contact with lithium and rubidium. Incompatible with boron diiodophosphide; ethylene oxide; metal oxides, metals(aluminum, potassium, lithium, sodium, rubidium); methyl azide; methylsilane, oxygen; oxidants(bromine, peroxyformic acid, chlorine dioxide, nitric acid, tetracarbonynickel, nitromethane, silver perchlorate, chlorates, sulfuric acid, nitrates,); tetracarbonynickel, oxygen, acetylinic compounds, ammonia, ethylene oxide, methylsilane, calcium,

Special Remarks on Corrosivity:
The high mobility and tendency to dispersion exhibited by mercury, and the ease with which it forms alloys (amalga) with many laboratory and electrical contact metals, can cause severe corrosion problems in laboratories. Special precautions: Mercury can attack copper and copper alloy materials.
Polymerization: Will not occur.

Section 11: Toxicological Information

Routes of Entry: Absorbed through skin. Dermal contact. Eye contact. Inhalation. Ingestion.
Toxicity to Animals:
LD50: Not available. LC50: Not available.
Chronic Effects on Humans:
CARCINOGENIC EFFECTS: Classified A5 (Not suspected for human.) by ACGIH. 3 (Not classifiable for human.) by IARC.
May cause damage to the following organs: blood, kidneys, liver, brain, peripheral nervous system, central nervous system (CNS).
Other Toxic Effects on Humans:
Very hazardous in case of skin contact (irritant), of ingestion, of inhalation. Hazardous in case of skin contact (corrosive, permeator).
Special Remarks on Toxicity to Animals: Not available.
Special Remarks on Chronic Effects on Humans:
May affect genetic material. May cause cancer based on animal data. Passes through the placental barrier in animal. May cause adverse reproductive effects (paternal effects - spermatogenesis; effects on fertility - fetotoxicity, post-implantation mortality), and birth defects.

Special Remarks on other Toxic Effects on Humans:

Section 12: Ecological Information

Ecotoxicity: Not available.
BOD5 and COD: Not available.
Products of Biodegradation:
Possibly hazardous short term degradation products are not likely. However, long term degradation products may arise.
Toxicity of the Products of Biodegradation: The products of degradation are less toxic than the product itself.
Special Remarks on the Products of Biodegradation: Not available.

Section 13: Disposal Considerations

Waste Disposal:
Waste must be disposed of in accordance with federal, state and local environmental control regulations.

Section 14: Transport Information

DOT Classification: Class 8: Corrosive material
Identification: : Mercury UNNA: 2809 PG: III
Special Provisions for Transport: Not available.

Section 15: Other Regulatory Information

Federal and State Regulations:
California prop. 65: This product contains the following ingredients for which the State of California has found to cause cancer, birth defects or other reproductive harm, which would require a warning under the statute: Mercury California prop. 65: This product contains the following ingredients for which the State of California has found to cause birth defects which would require a warning under the statute: Mercury Connecticut hazardous material survey.: Mercury Illinois toxic substances disclosure to employee act: Mercury Illinois chemical safety act: Mercury New York acutely hazardous substances: Mercury Rhode Island RTK hazardous substances: Mercury Pennsylvania RTK: Mercury Minnesota: Mercury Massachusetts RTK: Mercury New Jersey: Mercury New Jersey spill list: Mercury Louisiana spill reporting: Mercury California Director's List of Hazardous Substances.: Mercury TSCA 8(b) inventory: Mercury SARA 313 toxic chemical notification and release reporting: Mercury CERCLA: Hazardous substances.: Mercury: 1 lbs. (0.4536 kg)

Other Regulations:

Other Classifications:
WHMIS (Canada):

DSCL (EEC):
R23- Toxic by inhalation. R33- Danger of cumulative effects. R38- Irritating to skin. R41- Risk of serious damage to eyes. R50/53- Very toxic to aquatic organisms, may cause long-term adverse effects in the aquatic environment. S2- Keep out of the
reach of children. S7- Keep container tightly closed. S26- In case of contact with eyes, rinse immediately with plenty of water and seek medical advice. S39- Wear eye/face protection. S45- In case of accident or if you feel unwell, seek medical advice immediately (show the label where possible). S46- If swallowed, seek medical advice immediately and show this container or label. S60- This material and its container must be disposed of as hazardous waste. S61- Avoid release to the environment. Refer to special instructions/Safety data sheets.

HMIS (U.S.A.):

Health Hazard: 3
Fire Hazard: 0
Reactivity: 0

Personal Protection:

National Fire Protection Association (U.S.A.):

Health: 3
Flammability: 0
Reactivity: 0
Specific hazard:

Protective Equipment:
Gloves. Full suit. Vapor respirator. Be sure to use an approved/certified respirator or equivalent. Wear appropriate respirator when ventilation is inadequate. Face shield.

MATERIAL SAFETY DATA SHEET
ERA A Waters Company

SECTION 1: PRODUCT AND COMPANY IDENTIFICATION

MANUFACTURER: ERA
ADDRESS: 16341 Table Mountain Parkway
Golden, CO, 80403 U.S.A.

BUSINESS PHONE: 303-431-8454
FAX: 303-421-0159
EMAIL: info@eraqc.com

CHEMICAL EMERGENCY PHONE: 352-535-5053 (INFOTRAC)

Product Name(s): PCBs in Soil, PriorityPollutnT™, PCBs in Soil
Catalog / Part Number(s): 490, 491, 492, 493, 494, 495, 496, 497, 498, 624, 624AL1-4, 726, 186004307, 186004308, 186004309, 186004310, 186004311, 186004312, 186004313, 186004314, 186004321

MSDS Creation Date: November 22, 2005
Revision Date: July 19, 2012
MSDS Reference Number: 490-498

SECTION 2: HAZARDS IDENTIFICATION

Not hazardous according to Directive 199/45/EC. Use only as directed and in accordance with good laboratory practices.

SECTION 3: COMPOSITION/INFORMATION ON INGREDIENTS

<table>
<thead>
<tr>
<th>CHEMICAL INGREDIENT NAME</th>

Notes: Each product is 20-50 grams of an internal standard containing a mixture of organic chemicals & PCB arochlors with levels <0.05% dried in inert clean topsoil/sand. The soil may contain silica, crystalline – quartz. The sample is solid, loose dirt and does not contain liquid. Considered Non-Hazardous under OSHA 1910.1200 (HazCom) as product contains no known or potential carcinogens in excess of 0.1% of the composition nor any other hazardous chemical in excess of 1% of the composition.

Material Use: Analytical reagent or certified reference material used in laboratories. Uses also include research and development.

SECTION 4: FIRST-AID MEASURES

Inhalation: Remove to fresh air.
Skin Contact: Flush with water.
Eye Contact: Immediately flush with water for a minimum of 15 minutes.
Ingestion: Get medical attention.
After following first aid measures, seek medical attention.

SECTION 5: FIRE-FIGHTING MEASURES

Flammable Properties: Not flammable.
Extinguishing Media: Dry chemical, carbon dioxide or appropriate foam.
Unique Aspects Contributing To a Fire: None.
Special Fire Fighting Procedures: None.
Note: As in any fire, wear self-contained breathing apparatus, and full protective gear.

SECTION 6: ACCIDENTAL RELEASE MEASURES

Sweep up dirt and avoid creating dust. Place wastes into closed containers for proper disposal.

SECTION 7: HANDLING AND STORAGE

Keep container tightly closed. Store in a cool dry place. Handle in accordance with good laboratory practices. This product is intended for use only by people trained in the safety and handling of chemicals and laboratory preparations.

SECTION 8: EXPOSURE CONTROLS/PERSONAL PROTECTION

Handle in accordance with good laboratory practices.
Respiratory Protection: Not normally needed. May use HEPA or nuisance dust mask to reduce inhalation of dust.
Eye Protection: Safety glasses with side shields.
Skin Protection: Neoprene or other chemical resistant gloves. Disposable nitrile gloves are acceptable for light intermittent exposure.
Engineering Controls: Work in a fume hood or use general or other local exhaust ventilation to meet Exposure Limits.
SECTION 9: PHYSICAL AND CHEMICAL PROPERTIES
