

**American Recovery & Reinvestment Act (ARRA)
Leaking Underground Storage Tank (LUST)
Trust Fund
Interstate Truck Plaza, Plymouth**

ARRA Assistance Provided

Underground storage tank (UST) removal, soil and groundwater investigation and remediation.
Estimated cost: \$120,000

Background

The site is currently a vacant property and was formerly occupied by a bulk petroleum distribution facility. The facility was believed to be in operation from the early 1930s until the late 1970s. Petroleum impacted soil and groundwater was discovered during an initial site assessment conducted in 2002. Furthermore, the initial assessment determined that five USTs potentially remained on-site.

Current Status

The ultimate goal of the Indiana Brownfields Program is to complete remediation on the subject property and achieve a No Further Action designation for redevelopment. Consequently, five USTs located at the property were removed on September 28, 2009. Additional soil and groundwater subsurface investigation was conducted on November 11, 2009 to determine the extent of contamination. The subsurface investigation included the installation of six temporary soil borings and three permanent monitoring wells. Pending analytical results, groundwater monitoring is scheduled to begin in early December. The site is expected to achieve commercial/industrial closure through recordation of an environmental restrictive covenant.
