SITE GEOMETRICS NOTES:

- Existing pavement shall be saw cut in all areas where indicated.
- All utility trenches under and within 5 feet of pavement shall be completely backfilled with granular material per state and local regulations.
- Contractor shall promptly repair any damage caused to adjacent areas to original condition or better.
- Contractor shall maintain existing utilities to stay in service and protect against damage during construction.
- Contractor shall protect existing trees to remain from damage during construction.
- Site shall conform with stormwater pollution protection plan requirements prior to start of work.
- All disturbed areas should be capped with 2" topsoil, mulched and seeded.
- Seed mixture R per indot standards specifications section 621 shall be used within 30' of the roadway. Native seed mixture shall be placed on all other disturbed soils.
- Contractor is responsible for visiting the site and field verifying the existing conditions. Contractor shall notify the owner and engineer of any discrepancies.
- Contractor shall verify all dimensions in the field prior to start of construction. Contractor shall be responsible for all field dimensions. If any discrepancies are found in these plans from actual field conditions, the contractor shall notify the engineer immediately.

SITE GRADING NOTES:

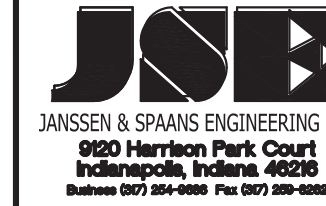

- Grades shown are finished grade.
- Contractor is responsible for protecting and maintaining benchmarks. If benchmarks need to be relocated, they shall be relocated by a registered land surveyor in the state of Indiana, prior to original benchmark being removed. Relocated benchmark information shall be provided to the owner and Janssen & Spaans Engineering.
- Provide positive drainage without ponding in all areas after construction, contractor to test for and correct if any standing water conditions.
- Contractor shall adjust any existing utility infrastructure (rims, boxes, valves, hydrants, etc.) That are to remain to match proposed finished grade at contractor's cost.
- Contractor shall perpetuate any subsurface drain tiles or pipes encountered during construction and provide positive outlet to downstream receiving system. Contractor to notify the engineer with any circumstances where this cannot be accomplished.
- Due to site constraints, the earthwork for the site as designed may or may not balance, it is the contractors responsibility to review the existing conditions and include in their bid all earthwork costs including imports and or exports necessary to make the site balance.
- If creation of swales creates excess soil, disperse excess on site. Contours are approximate and are to show new swale locations to promote drainage. Contractor shall redistribute excavated material from swale excavation onsite prior to capping the site with topsoil. No native soil material is anticipated to be hauled off, only existing pavement and subbase stone.

A diagram showing a magnetic field line passing through a bar magnet and a circular loop. The bar magnet is oriented horizontally with its North pole on the left and South pole on the right. A circular loop is placed vertically, with its plane perpendicular to the magnetic field line. The magnetic field line is represented by a line with an arrow pointing from the North pole to the South pole, passing through the center of the loop.
