CANNED FOOD RECALL EXPANDED

INDIANAPOLIS – New Era Canning Company in New Era, Michigan has expanded its canned food recall because of potential *Clostridium botulinum* (*C. botulinum*) contamination to include all canned green beans and garbanzo beans distributed by the company nationwide over the last five years. The affected cans are large, institutional-sized containers weighing about 6.5 pounds. Botulism is a muscle-paralyzing disease caused by a toxin made by the bacterium, *Clostridium botulinum*.

Due to this recall, Inter-American Products, a division of The Kroger Co. today announced a voluntary recall on all codes of Deli Chef Tri-Bean Salad sold from store deli counters. The green beans in the Tri-Bean Salad were processed by the New Era Canning Company. Consumers should not consume this product even if it does not look or smell spoiled. No illnesses have been reported.

“People who have any of these products or any food made with these products should throw them away immediately,” said Lynae Granzow, enteric epidemiologist at the Indiana State Department of Health. “The toxin is so potent that any exposure to it could cause botulism. People can become sick if the toxin gets on their hands or their face, so I recommend consumers do not even open the cans.”

The FDA says consumers should place recalled products in two plastic bags tightly sealed before placing in a non-recyclable trash receptacle outside of the home. If cans are swollen, bulging or leaking, gloves and eye protection are recommended before double-bagging and disposing of the cans. Health officials recommend thoroughly washing both hands for at least two minutes after carefully removing and disposing the gloves.

Symptoms of botulism can begin from 6 hours to 10 days after exposure to the toxin. Symptoms may include: double vision, blurred vision, drooping eyelids, slurred speech, difficulty swallowing, and muscle weakness that moves progressively down the body starting at the head, and then descending to the arms, torso, and legs.

Complications of botulism can include paralysis of the breathing muscles, which can result in death unless assistance with breathing (mechanical ventilation) is provided. Individuals who have these symptoms and who may have recently eaten the products under recall or other food products made with them should seek immediate medical attention.

To date, no illnesses have been reported to the FDA; however, consumers should not consume these products, even if they appear to be normal, because of the potential serious health risk. Consumers who have the affected products or who have used them in recipes should immediately double-bag, and throw the cans and food away.

Signs of *C. botulinum* in canned foods can include bulging lids, foam, or a bad odor. However, not all cans will show signs if contaminated with *C. botulinum*.

Health officials say most of the recalled cans were distributed to nursing homes, restaurants and schools. Local health departments around the state have already conducted onsite checks to ensure recalled products from the first two (2) recall announcements have been removed from these facilities, and have found the recall to be 100 percent effective to date. The State Department of Health is urging consumers to check cupboards, pantries, and other places they store canned food to be sure they do not have the recalled products in their homes.

--MORE--
The recall covers the following products. *Unless otherwise noted, all cans weigh about 6.5 pounds:

**Bunny brand, distributed by Bunn Capitol Co., Springfield, IL**
- Blue Lake mixed and shortcut green beans (UPC 6444500193)

**Classic Sysco brand, distributed by Sysco Corp., Houston, TX**
- Blue Lake cut green beans (UPC 7486510779)
- Blue Lake cut green beans (UPC 7486510487)
- Garbanzo beans (UPC 7486510484)

**Code brand, distributed by Code, Atlanta, GA**
- Mixed & short cut green beans (UPC 1207310120)
- Fancy garbanzo beans without sulfites (UPC 1207316120)
