*Data are provisional and will be finalized later in 2009.

Technical Notes:

Reported cases of acute hepatitis B must meet the following clinical and laboratory criteria:

**Clinical:**
- An acute illness with a) discrete onset of symptoms, and b) jaundice or elevated serum aminotransferase levels.

**Laboratory:**
- IgM antibody to hepatitis B core antigen (anti-HBc) positive or hepatitis B surface antigen (HbsAg) positive
- IgM anti-HAV negative (if done)
