RE: 2018 Statewide Analysis of Future Resource Requirements for Electricity

From : Ray W. Wilson

6448 Blossom Ln

Indianapolis, IN 46278

Humans are facing the largest challenge in their history on earth – global warming and climate change as a result of increased carbon dioxide and methane in the atmosphere.

We absolutely need to do something about it. Indiana, as a significant contributor to the problem, also has a large opportunity to do something about it. We need to divorce ourselves from burning fossil fuels as soon as possible. Fortunately we are at point in history that not only is it the right thing to do, it is also the most economical thing to do. Wind and solar energy production of electricity is now less expensive than producing electricity with coal or natural gas.

While it appears to some that burning natural gas is an economical alternative, it is only common sense as we burn more of it, it will become scarcer, and the price will go up. In contrast, the cost of wind and solar energy is zero and will continue to be zero. And this is not taking into consideration the eventual tax or fees that will be added for the emission of carbon dioxide into the atmosphere, the harmful health effects, and eventual cost to cleanup of the coal ash ponds that result from burning coal.

I have participated in creating several utility integrated resource plans. None of them have looked seriously at the opportunities afforded by renewable energy and the eventual need to convert our transportation fleet from gasoline and diesel fuel to electricity. This Indiana study of future electricity resource planning must be much more visionary, bold and common sense and not stuck in old thinking.

I want my state to become a leader:

- In the clean generation of electricity
- The efficient use of electricity
- The use of distributed generation of electricity
- The use of electricity to power our cars and trucks
- Laws and regulations that encourage our rapid movement to renewable generation of electricity
- Leadership of our elected and appointed officials that will generate the inspiring vision of our future
- Funding and guidance for our universities to focus research on the alternative energy future
- Our schools to incorporate the vision of the energy future into their daily curriculum
- Our faith communities to take responsibility to teach about caring for creation

I want to see these requests to be included in the state energy plan for the future. It seems pretty straight forward. It can be done. It just needs some visionary thinking.

Please make it happen. Thank you for seriously considering my ideas.

Subject: Comments re Draft Statewide Analysis

**** This is an EXTERNAL email. Exercise caution. DO NOT open attachments or click links from unknown senders or unexpected email. ****

Dear Commissioners and Staff -

The Indiana General Assembly enacted Senate Enrolled Act 412 in May 2015, which amended Indiana Code § 8-1-8.5-3 concerning a statewide analysis of long-range needs for expansion of facilities for the generation of electricity.

The law requires the Indiana Utility Regulatory Commission (Commission) to prepare a statewide analysis that includes (1) the probable future growth of the use of electricity; (2) the probable needed generating reserves; (3) in the judgment of the Commission, the optimal extent, size, mix, and general location of generating plants; (4) in the judgment of the Commission, the optimal arrangements for statewide or regional pooling of power and arrangements with other utilities and energy suppliers to achieve maximum efficiencies for the benefit of the people of Indiana; and (5) the comparative costs of meeting future growth by other means of providing reliable, efficient, and economic electric service, including purchase of power, joint ownership of facilities, refurbishment of existing facilities, conservation (including energy efficiency), load management, distributed generation, and cogeneration.

As an individual who was personally involved in the original enactment of Indiana Code § 8-1-8.5-1 et al in the mid-1980s and who has participated in the Commission's Integrated Resource Planning process since it was initiated pursuant to that statute, I have a special personal interest in the Commission's Statewide Analysis. I also have a special personal interest because, hard as it is for me to believe, I am now not only a parent, but a grandparent and great-grandparent greatly concerned with the future of my children, grandchildren and great-grandchildren. So, I submit these comments as an individual not as a member or representative of any organization or group.

As a preface to my other comments, I want to express my appreciation to the Commission for preparing this first Statewide Analysis, which I consider to be a significant step in the right direction regarding the evolution of the Commission's statutory role as the administrative agency with both the authority and the duty to conduct and report to the General Assembly and the Governor the results of its impartial, independent, and expert studies and analyses of the electric utility industry. I am especially but not exclusively appreciative of the collaborative involvement in and contributions to the Statewide Analysis of the Commission's Division of Research, Policy and Planning and the State Utility Forecasting Group (SUFG). I am also thankful that the Statewide Analysis relies on sources of information in addition to the integrated resource plans of the individual electric utilities which are required by law to prepare and submit them to the Commission, including especially but not exclusively the update modeling capability of the SUFG and key analyses and reports of such organizations as MISO, PJM, NERC and EIA. Finally, I very much appreciate the opportunity which the Commission has provided for interested organizations, groups and individuals to submit

comments on the draft Statewide Analysis prior to finalizing it and transmitting it to the General Assembly and the Governor, including especially the extension of time for both the public hearing and the filing of written comments.

That said, I would offer the following general comments regarding the principal ways in which I believe that the Statewide Analysis could -- and should -- be improved to better serve the Commission's statutory role and the public interest of the State of Indiana.

First and foremost, I would urge the Commission to expand the breadth and depth of the Statewide Analysis. In my opinion, the current draft represents a document the scope and detail of which would be more consistent with an executive summary than the full-scale analysis and report which I believe is intended by Indiana Code § 8-1-8.5-3. I also believe that the customers who pay the Public Utility Fee which funds the Commission would consider the expenditure of the additional resources (including but not limited to the hiring of additional staff) required for a broader and deeper full-scale analysis and report to be well worth the cost.

Second, I believe that the information-gathering and analysis process underlying the Statewide Analysis could and should also be expanded in its breadth and depth, perhaps through a collaborative process involving an advisory executive committee and topical subcommittees of utility, customer, energy supplier and other representatives of the interested public. This is a process which the Commission has used to good effect in the past and I think would be especially useful at this "watershed time" in the continuing evolution of the electric utility industry. In this context, I also think that the Commission should consider a three-year cycle for updating its Statewide Analysis to coincide with the time frame which it recently decided makes the most sense for its Integrated Resource Planning cycle.

Third, it is my opinion that Indiana Code § 8-1-8.5-3 expressly intends that the Commission reach and transmit its conclusions, judgments and recommendations to the General Assembly and the Governor on the substantive matters within the scope of the Statewide Analysis. Certainly, the Commission must always be cognizant that it is an impartial, independent administrative agency led by appointed not elected public officials with only those authorities and duties conferred by statute. But, the Commission is also Indiana state government's principal repository of expertise and experience relating to the electric utility industry. And, when the controlling statute expressly requests an analysis and report which reflects "the judgment of the Commission," there should be no doubt that the state's elected officials are directing as well as inviting the Commission to offer them the benefit of its independent, impartial, expert conclusions, judgments and recommendations on the substantive matters within the scope of the Statewide Analysis.

Fourth, with respect to the substantive matters within the scope of the Statewide Analysis, I believe that the Commission has both the authority and the duty to address the implications of the dramatic technological and market transformations now taking place in the electric utility industry globally and nationally for the evolution of Indiana's existing business model and regulatory paradigm for the industry. In particular, I believe that the Statewide Analysis should include an independent, impartial review of the so-called "Utility of the the Future" research, analyses and discussions which are taking place in the larger world outside Indiana, including underlying statutory reviews, commission generic investigations, and other forums such as university and "think tank" conferences, colloquia and collaboratives.

Fifth and finally, my view is that the Statewide Analysis could and should address the implications of global climate change for the near-term future of the Indiana electric utility industry with respect to the topical matters spelled out in Indiana Code § 8-1-8.5-3 . In my opinion, to do otherwise would be

"dereliction of duty" on the part of the Commission. Certainly, this part of the analysis must be independent and impartial and reflect "the judgment of the Commission" rather than any interest group or political party, but it cannot be a void or a vacuum. In particular, my view is that the Commission should review and report on the implications for the Indiana electric utility industry of the so-called "Two Degrees Centigrade Scenario" incorporated in the Paris Climate Accords and being intensively and extensively developed, researched and analyzed around the world, including at Indiana and Purdue Universities here in Indiana. Whether any particular entity, group or individual agrees or disagrees with the science of global climate change is simply not relevant to the indisputable fact that it is a contingency of sufficient significance and probability to warrant the assessment of its most important consequences for the Indiana electric utility industry in a Commission Statewide Analysis being prepared in 2018.

While there are many other more specific comments I could offer, I believe that these general comments are the most important ones for me to make at this time. Accordingly, I will offer only these comments in this forum at this time and reserve others for other forums and later times. Thank you for your consideration of them.

Respectfully and appreciatively,

- Leadership of our elected and appointed officials that will generate the inspiring vision of our future

- Funding and guidance for our universities to focus research on the alternative energy future

- Our schools to incorporate the vision of the energy future into their daily curriculum

Our faith communities to take responsibility to teach about caring for creation I want to see these requests to be included in the state energy plan for the future. It seems pretty straight forward. It can be done. It just needs some visionary thinking.

Please make it happen. Thank you for seriously considering my ideas.

Thank you for the opportunity to comment on the Draft Statewide Resource Analysis.

This important analysis should include the economic risks of continued reliance on fossil fuels like coal and gas, as well as the opportunities to invest in low-cost wind, solar and energy efficiency, which are not subject to fuel cost volatility. Renewable, affordable energy is here and now.

Any energy analysis conducted in 2018 should reflect that, and Hoosiers deserve the benefits of it. Please rewrite your analysis to clearly warn Governor Holcomb and public officials that Indiana will be left behind by technological progress if we don't develop policies and programs to manage our transition from outdated coal and gas to an affordable renewable and efficient energy economy.

Sincerely,

Ray Wilson

Dear IURC,

We feel strongly that the state should be utilizing resources that already exist daily--like the sun, the movement of water, most days the wind. Why not harness something that happens daily? It is the intelligent thing to do. Thank you

Dear IURC,

Dear IURC members: The future of us all depends on the adoption of renewable energy which is already cheaper than using fossil fuels and which is much, much cleaner! Please don't let the large power companies dictate our energy policies. Instead help reduce pollution of our land, air and water while significantly decreasing the release of CO2 increasing climate change effects which are already causing tremendous health and environmental damage. Please adhere to scientifically referred studies.

Thank you for the opportunity to comment on the Draft Statewide Resource Analysis.

Subject: Comment on the Statewide Analysis of Future Resource Requirements for Electricity

**** This is an EXTERNAL email. Exercise caution. DO NOT open attachments or click links from unknown senders or unexpected email. ****

Indiana Utility Regulatory Commission,

My name is Michelle Carr. I live in Columbus, Indiana. I am a wearer of many hats. I am a Climate Reality Leader, an Committee Chair Of Columbus's Energy Matters, an Executive Committee Chair for my local Sierra Club group as well as a delegate for the State Chapter. But the reason I took on so many hats is due to the most important hat I wear and that is the hat of a Hoosier mother. I am sure being in the positions that you are, you understand the need to want to help others. I was in such a place as well back in 2016 when I decided that I needed to do more to help ensure that my kids and those of their generation have a habitable planet in which to reside.

We all know that Climate Change is a reality. I'm sure you are just as aware that our state is in the top four rankings for having the worst air pollution. We are currently the home to four super polluters in southwestern Indiana. That which collectively pump out millions of pounds of toxic air pollution. We know the harm that this places on our citizens. We know such pollution causes many health issues, many of which are life threatening. We know the affect that such pollution has on our land and air. We know these affects are heating up our planet. If you don't know the affects of climate change in Indiana I highly recommend that you visit Purdue's Climate Change Impact Report. <https://ag.purdue.edu/climate/> These issues are all byproducts of the fact that we continue business as usual, removing from the ground toxic materials so we can light our homes or send a public comment in an email.

We know that Fossil Fuels are a limited supply and will one day be gone. And though they have allotted some to become very wealthy, they will eventually dry up. What happens then if we aren't looking in a new direction or have a plan b? The current analysis is continuing business as usual without taking into consideration the health of Hoosiers, our planet and lacks a plan b when we have nothing left to burn. A good plan is one that not only looks out for those it impacts but also is proactive and not reactive. I believe we have a wonderful opportunity to be proactive here. We can REPOWER our state with clean energy. A fast growing field that supplies more jobs in our state than that of the coal industry.

Clean energy is just that, clean. A sun spill is literally called a sunny day. A wind spill is an excellent day to fly a kite and no one's health is put into jeopardy. Renewable energy is by its very name, unlimited. We won't have to worry about finding that the sun has completely disappeared. If we ever do, than I assure you, we will have bigger problems than the lack of electricity.

In the end, there are reasons why we don't wash all of our laundry by hand anymore, ride in horse pulled buggies or cover our the interior of our homes with lead based paint. So why would we still rely on outdated and harmful methods to power our state? This is our opportunity to change. This is our opportunity to leap into the future. This is our opportunity to be good stewards of our planet and make that difference that could mean the WORLD to our children.

Thank you for listening to my thoughts,
Michelle Carr

Subject: Tell the IURC to Repower Indiana

**** This is an EXTERNAL email. Exercise caution. DO NOT open attachments or click links from unknown senders or unexpected email. **** _____

Dear IURC,

In a single hour, the amount of power from the sun that strikes the Earth is more than the entire world consumes in an year.

To put that in numbers, from the US Department of Energy:

Each hour 430 quintillion Joules of energy from the sun hits the Earth. That's 430 with 18 zeroes after it!

In comparison, the total amount of energy that all humans use in a year is 410 quintillion Joules.

Thank you for the opportunity to comment on the Draft Statewide Resource Analysis.

This important analysis should include the economic risks of continued reliance on fossil fuels like coal and gas, as well as the opportunities to invest in low-cost wind, solar and energy efficiency, which are not subject to fuel cost volatility. Renewable, affordable energy is here and now.

Any energy analysis conducted in 2018 should reflect that, and Hoosiers deserve the benefits of it. Please rewrite your analysis to clearly warn Governor Holcomb and public officials that Indiana will be left behind by technological progress if we don't develop policies and programs to manage our transition from outdated coal and gas to an affordable renewable and efficient energy economy.

Sincerely,

Dear IURC,

The cost of coal will continue to go up as they have to go deeper to get it. Also need to include the cost of treating black lung in coal miners. Should also include the cost of treating breathing issues among the general public due to the particulates bumped into the air by coal fired generating plants.

Thank you for the opportunity to comment on the Draft Statewide Resource Analysis.

Dear IURC,

We recently installed a solar array and are very happy with it. The thing we are not happy about is the fact that Indiana is not a pro-solar state. There are no incentives to go solar in Indiana unlike other states and the utility companies don't treat customers fairly when they purchase energy from us. As stated Indiana is going to be left behind if we don't start recognizing and rewarding those who do decide to use the solar energy which is available to all of us. Thank you

Mrs Sara Hermesch

Dear IURC,

I feel based on Purdue university's climate change report, regarding high emissions as well as medium, that the hazards posed by fossil fuels and pollution have to be offset as a minimum, if not planning for zero emissions in the not too distant future.

As a family shareholder in some of the utilities and energy companies, we have been voting at the corporate level for these changes for the last few years. Recently, We have purchased only Utilities who are more invested in alternative energy. Even though initial capital may seem less cost effective, in the long run limited resources will prove them to be extremely cost effective with superior efficiencies, utilizing the utility's and energy technology combined.

Thank you,
Jim Bruns

Dear IURC,

Please act responsible for the citizens for Indiana. Utilities are retiring coal and, so far, replacing it with mostly new gas infrastructure. Meanwhile, the cost of new wind and solar power is lower today than the average cost of running a coal plant in Indiana and also lower than the cost of building new gas.

We can benefit by investing in wind and solar power.

Annette Grisley

Subject: Tell the IURC to Repower Indiana

**** This is an EXTERNAL email. Exercise caution. DO NOT open attachments or click links from unknown senders or unexpected email. **** _____

Dear IURC,

Please don't let my state be left behind.

Thank you for the opportunity to comment on the Draft Statewide Resource Analysis.

This important analysis should include the economic risks of continued reliance on fossil fuels like coal and gas, as well as the opportunities to invest in low-cost wind, solar and energy efficiency, which are not subject to fuel cost volatility. Renewable, affordable energy is here and now.

Any energy analysis conducted in 2018 should reflect that, and Hoosiers deserve the benefits of it. Please rewrite your analysis to clearly warn Governor Holcomb and public officials that Indiana will be left behind by technological progress if we don't develop policies and programs to manage our transition from outdated coal and gas to an affordable renewable and efficient energy economy.

Sincerely,

Sam Chambers

Dear IURC,

In this day and age our state should concentrate on moving to renewable energy sources. We want more jobs in Indiana. Beginning the move to renewable energy will create job opportunities, enable an upgrade to our grid infrastructure, and save our state money in the long run. We need to leave it in the ground as soon as possible.

Thank you for the opportunity to comment on the Draft Statewide Resource Analysis.

Dear IURC,

I was born and raised in Southwestern Indiana. I've watched friends die young. Our air is horrible in this armpit of the state and our health insurance rates are higher because of it. The amazing thing is we also pay more for our utility costs than the rest of the state. I guess it's a privilege to be poisoned. Please don't let this continue. I would like for my granddaughter to live a long happy life. Does she need to move?

Dear IURC,

We in Indiana should be building more permaculture and sustainable communities through one retrofitting the existing structures and two buy building new structures with ever-improving knowledge that we have come into understanding we have so many things that we can do to make it so we don't even need the utility companies except for a backup for the corporations we have so many different varieties of concrete that can do amazing things like prevent concrete which allows water to go through in heat to come up through there by keeping it from freezing as well as hydroplaning we have hip Crete's we have aerated concrete to which the benefits of both are just off the charts CFC Concrete have been used in Europe for over 50 years and have only gotten better with no toxic side effects we have millions of different kinds of solar collection devices and ways to use it we have many new gasification processes to turn trash into fuel cleanly and efficiently and or recycle them upcycle them or straight out reuse them we have many forms of wind power we have many ways to create new fuels new biomatters new biomass materials earthships have had many problems but they have also shown many solutions as well as many other Sustainable Building designs we need to start looking at all of them as one holistic entity instead of many separate parts we will find that we can use the downsides of one to fix problems of the others and vice versa if Germany can go from a completely nuclear Society to a completely solar Society in under 2 years I see no reason why Indianapolis who supported permaculture and sustainability in the Water Systems and clean air can't build a more permaculture in sustainable based society in short time where food water gas electric shelter all the things necessary for life are supported by the system that we live in they're by allowing us to do better at the Technologies in development of new things unfortunately no matter what the state passes you will have backward communities that will fight this thereby making it so only those who can afford to get out into the country and or are Mega rich will be able to benefit from these policies I lived in Speedway I had a house retrofitted so it had no utilities and a fire pit with a geodesic dome built over my neighbor's love me and the local ordinances Police Department fire department Health Department you name it if it was a department of Speedway they harass me till I could no longer afford to mess with Their fines and bull and keep up my mortgage all while three members of my family were passing away I was fighting them on this so unless you intend on forcing these communities to adopt such Concepts as few of them really have like Fountain Square and some of the community around Butler things won't get better until the ignorance is eliminated through educating

Dear IURC,

We need to switch from fossil fuels to renewable energy sources like wind and solar. We should not turn to fracking or nuclear, but invest in better batteries and storage. We need to think long term, and not about entrenched energy interests continuing to get richer. There are already more renewable energy jobs in Indiana than fossil fuel jobs. We already cannot contain and treat the water from industrial sites (such as old Pence Family gas stations) polluting our water. We do not need to continue polluting our air and water. Indiana already has very poor air quality. Time to clean up!!

Thank you for the opportunity to comment on the Draft Statewide Resource Analysis.

This important analysis should include the economic risks of continued reliance on fossil fuels like coal and gas, as well as the opportunities to invest in low-cost wind, solar and energy efficiency, which are not subject to fuel cost volatility. Renewable, affordable energy is here and now.

Any energy analysis conducted in 2018 should reflect that, and Hoosiers deserve the benefits of it. Please rewrite your analysis to clearly warn Governor Holcomb and public officials that Indiana will be left behind by technological progress if we don't develop policies and programs to manage our transition from outdated coal and gas to an affordable renewable and efficient energy economy.

Sincerely,

Subject: Tell the IURC to Repower Indiana

**** This is an EXTERNAL email. Exercise caution. DO NOT open attachments or click links from unknown senders or unexpected email. **** _____

Dear IURC,

Solar and wind are not only cheaper in the long run, they protect the health of our children. I hate being in a state considered to be one of the most regressive and backwards in the nation when it comes to energy policy. Much better to be a leader in solid renewables and a champion of health for our people.

Thank you for the opportunity to comment on the Draft Statewide Resource Analysis.

Dear IURC,

Forty-three years ago Denmark began to use Renewables and plan for the future. That is also the same time that we were building the coal-fired power plants in Southwestern Indiana. Now we watch as the rest of the world promotes their renewable progress while we parade around in make America great again hats as we are pickled in our own pollution. It's time to prove our greatness through solar and wind power. All that we are showing the world by using oil, gas and coal is our greed.

Subject: Comments regarding the use of fossil fuels

**** This is an EXTERNAL email. Exercise caution. DO NOT open attachments or click links from unknown senders or unexpected email. ****

To whom it may concern,

Having spent twenty years in the eastern part of Kentucky where havoc has been done to the mountains by the coal industry, I wish to express my belief in the harm done to our environment and to the people who have lived in the areas where coal was mined. There is no such thing as clean coal. Yes, it served for awhile in the past but I have now seen the good done through solar panels and wind. It is time to encourage a new way to give energy to all and Indiana is far behind in this area. Let us save our planet in every way possible and the first and most necessary way is to provide clean air and stop the use of fossil fuels.

Thank you,

Amy Kistner

Please and thank you! Our state can rely more on clean, renewable energy!

Thank you for the opportunity to comment on the Draft Statewide Resource Analysis.

This important analysis should include the economic risks of continued reliance on fossil fuels like coal and gas, as well as the opportunities to invest in low-cost wind, solar and energy efficiency, which are not subject to fuel cost volatility. Renewable, affordable energy is here and now.

Any energy analysis conducted in 2018 should reflect that, and Hoosiers deserve the benefits of it. Please rewrite your analysis to clearly warn Governor Holcomb and public officials that Indiana will be left behind by technological progress if we don't develop policies and programs to manage our transition from outdated coal and gas to an affordable renewable and efficient energy economy.

Sincerely,

Erich Richter

Dear IURC,

The era for fossil fuels have passed. It is time for every state to embrace the movement of clean renewable energy. No one had mentioned the risks of fossil fuels on the residents of our state and our planet. It is pass time for each individual and the US as a whole to devote every resource we have to cleaning up the mess that corporations have been allowed to do. Cleaning up our planet should not be political. Clean water, air and land can be as lucrative as the fossil fuels that polluted our state and our planet. This is the responsibility of everyone. Make Indiana the leader.

Thank you for the opportunity to comment on the Draft Statewide Resource Analysis.

Dear IURC,

Please include renewable energy sources. Fossil fuels are finite- they will run out some day. Plus they are expensive to source and use. Renewables are free. Also fossil fuels are much worse for public health and the environment. Lastly the renewable energy field creates as many or more employment opportunities than fossil fuels

Thank you for the opportunity to comment on the Draft Statewide Resource Analysis.

Subject: Tell the IURC to Repower Indiana

**** This is an EXTERNAL email. Exercise caution. DO NOT open attachments or click links from unknown senders or unexpected email. **** _____

Dear IURC,

Indiana is already one of the most polluted states, and others who suffer from lung disease have a hard time. And of course chemical pollution is horrid too. Save a child!!!! GO GREEN INDIANA!!!!!! DON'T LET BIG DADDY OIL INFLUENCE YOUR DECISION.

Thank you for the opportunity to comment on the Draft Statewide Resource Analysis.

This important analysis should include the economic risks of continued reliance on fossil fuels like coal and gas, as well as the opportunities to invest in low-cost wind, solar and energy efficiency, which are not subject to fuel cost volatility. Renewable, affordable energy is here and now.

Any energy analysis conducted in 2018 should reflect that, and Hoosiers deserve the benefits of it. Please rewrite your analysis to clearly warn Governor Holcomb and public officials that Indiana will be left behind by technological progress if we don't develop policies and programs to manage our transition from outdated coal and gas to an affordable renewable and efficient energy economy.

Sincerely,

Cynthia Hufford

Dear IURC,

Dear IURC, as a citizen and a person of deep religious faith, I am both concerned and optimistic about Indiana's energy future. Concerned, because we must address the threat of climate change by reducing -- no, eliminating! -- CO2 emissions from our energy portfolio. Optimistic, because clean renewable energy solutions are available and I am confident that NIPSCO and our other Indiana companies have the ingenuity to implement them, especially wind power, in our state.

Dear IURC,

Not only are renewable energy sources sustainable, and cheaper than most fossil fuels (and will continue to become cheaper), they will create jobs for Hoosier communities! We need to include and prioritize renewable energy sources in Indiana. Please consider this, and include climate change in Indiana's future energy policy.

Thank you for the opportunity to comment on the Draft Statewide Resource Analysis.

This important analysis should include the economic risks of continued reliance on fossil fuels like coal and gas, as well as the opportunities to invest in low-cost wind, solar and energy efficiency, which are not subject to fuel cost volatility. Renewable, affordable energy is here and now.

Any energy analysis conducted in 2018 should reflect that, and Hoosiers deserve the benefits of it. Please rewrite your analysis to clearly warn Governor Holcomb and public officials that Indiana will be left behind by technological progress if we don't develop policies and programs to manage our transition from outdated coal and gas to an affordable renewable and efficient energy economy.

Sincerely,

Eric Mannweiler

Dear IURC,

Very one-sided. We need to consider all sources of energy - especially solar - and really consider the many many downsides of coal. Its day must pass and quickly. No new coal plants! Indiana persists in being one of the most backward thinking states in the union and I am so very disappointed and disillusioned in my home state. We are backward in so many areas but energy leads the list of our failures to have any vision for the future. I am really ashamed to be a Hoosier.

Thank you for the opportunity to comment on the Draft Statewide Resource Analysis.

Dear IURC,

Indiana has more than 20 coal-fired power plants emitting sulfur dioxide into the air. This pollutant causes irritation to the mucous membranes of the eyes, nose, throat and lungs exacerbating illness like asthma and heart disease. The electric company can then transport this electricity to the East Coast for sale at a higher price while Hoosiers pay the cost of the pollution. Please resist the the strong lobbies of these corporations to undermine the environmental standards.

Rooftop Solar should be encouraged to provide independence from a grid that could be brought down by unforeseen weather conditions or by hackers.

Please encourage the use of renewable energy sources.

Thank you for the opportunity to comment on the Draft Statewide Resource Analysis.

Dear IURC,

Please drop your nineteenth century thinking and realize that coal and oil were huge mistakes that will take generations to correct--if we are willing to stop using them. Continuing to use fossil fuels or nuclear (pronounced new klee ar) reactors is suicidal.

Thank you for the opportunity to comment on the Draft Statewide Resource Analysis.

This important analysis should include the economic risks of continued reliance on fossil fuels like coal and gas, as well as the opportunities to invest in low-cost wind, solar and energy efficiency, which are not subject to fuel cost volatility. Renewable, affordable energy is here and now.

Any energy analysis conducted in 2018 should reflect that, and Hoosiers deserve the benefits of it. Please rewrite your analysis to clearly warn Governor Holcomb and public officials that Indiana will be left behind by technological progress if we don't develop policies and programs to manage our transition from outdated coal and gas to an affordable renewable and efficient energy economy.

Sincerely,

Charles Daugherty

Dear IURC,

I believe the continued use of fossil fuels, namely coal will harm the environment. This includes harming human and animal health. More wind farms need to be considered to generate electricity.

Thank you for the opportunity to comment on the Draft Statewide Resource Analysis.

Subject: Tell the IURC to Repower Indiana

**** This is an EXTERNAL email. Exercise caution. DO NOT open attachments or click links from unknown senders or unexpected email. **** _____

Dear IURC,

Thank you for the opportunity to comment on the Draft Statewide Resource Analysis.

This important analysis should include the economic risks of continued reliance on fossil fuels like coal and gas, as well as the opportunities to invest in low-cost wind, solar and energy efficiency, which are not subject to fuel cost volatility. Renewable, affordable energy is here and now.

Any energy analysis conducted in 2018 should reflect that, and Hoosiers deserve the benefits of it. Please rewrite your analysis to clearly warn Governor Holcomb and public officials that Indiana will be left behind by technological progress if we don't develop policies and programs to manage our transition from outdated coal and gas to an affordable renewable and efficient energy economy.

Sincerely,

Earl Scott

Dear IURC,

I'm very opposed to fracking. I don't think it is safe and I don't feel it is necessary. We have several renewable energies that aren't being considered, and I think that is a big mistake. I know Vectren, and other big energy companies like them, has lobbyists to make their voices heard. My voice, and individuals like me, deserve to have our ideas considered. I think people should be encouraged to use solar, wind and renewable energies when building homes or businesses. I have more thoughts on this issue. I feel very strongly about energy. We haven't made the best decisions in the past. We have a chance to change that here. Thank you so much for giving me the chance to have my ideas heard.

Dear IURC,

My vision for Indiana's energy future includes a transition ASAP to clean, renewable energy that is affordable for everyone. It involves energy generation by local communities through partnership with homes, businesses, schools, health centers, churches and local government generating most, if not all, of its own energy through renewable sources. I see existing utility companies collaborating with entrepreneurs to create jobs in the renewable energy sector for those who worked at power plants and in the fossil fuel extractive industries. My vision includes collaborative planning at the local, state and federal levels with all citizen stakeholders to move ASAP into a smooth transition to using clean and renewable energy sources.

Thank you for the opportunity to comment on the Draft Statewide Resource Analysis.

This important analysis should include the economic risks of continued reliance on fossil fuels like coal and gas, as well as the opportunities to invest in low-cost wind, solar and energy efficiency, which are not subject to fuel cost volatility. Renewable, affordable energy is here and now.

Subject: Tell the IURC to Repower Indiana

**** This is an EXTERNAL email. Exercise caution. DO NOT open attachments or click links from unknown senders or unexpected email. **** _____

Dear IURC,

Thank you for the opportunity to comment on the Draft Statewide Resource Analysis.

This important analysis should include the economic risks of continued reliance on fossil fuels like coal and gas, as well as the opportunities to invest in low-cost wind, solar and energy efficiency, which are not subject to fuel cost volatility. Renewable, affordable energy is here and now.

Any energy analysis conducted in 2018 should reflect that, and Hoosiers deserve the benefits of it. Please rewrite your analysis to clearly warn Governor Holcomb and public officials that Indiana will be left behind by technological progress if we don't develop policies and programs to manage our transition from outdated coal and gas to an affordable renewable and efficient energy economy.

Sincerely,

Michael Murphy

Dear IURC,

Ways to use solar energy were invented as early as 1878, but people chose the quicker, easier fossil fuels. We have paid the price for this lack of foresight in pollution and climate change. We have to take action now to keep things from getting any worse.

Thank you for the opportunity to comment on the Draft Statewide Resource Analysis.

Dear IURC,

Significant global warming by the end of the century, an average of 2-4 degrees Centigrade (4-7 degrees Fahrenheit), is now inevitable. Indeed, it could be much worse. This will bring a profound reorientation in where we get our energy from. Indiana can prepare for this and become a leader or get left behind. Let's not get left behind.

Subject: Tell the IURC to Repower Indiana

**** This is an EXTERNAL email. Exercise caution. DO NOT open attachments or click links from unknown senders or unexpected email. **** _____

Dear IURC,

Thank you for the opportunity to comment on the Draft Statewide Resource Analysis.

This important analysis should include the economic risks of continued reliance on fossil fuels like coal and gas, as well as the opportunities to invest in low-cost wind, solar and energy efficiency, which are not subject to fuel cost volatility. Renewable, affordable energy is here and now.

Any energy analysis conducted in 2018 should reflect that, and Hoosiers deserve the benefits of it. Please rewrite your analysis to clearly warn Governor Holcomb and public officials that Indiana will be left behind by technological progress if we don't develop policies and programs to manage our transition from outdated coal and gas to an affordable renewable and efficient energy economy.

Sincerely,

Joshua Nelson

Dear IURC,

Investing in the current infrastructure does not make sense, when there are other more clean options better. We must keep in mind the type of environment we want to leave the younger generations. A St. Joseph County bank uses wind power with good success. I see no reason why the electric company couldn't invest in wind power also.

Thank you for the opportunity to comment on the Draft Statewide Resource Analysis.

Dear IURC,

Just look at the price/performance curve for solar PV, as one key example. This shows a steady gain which is likely to continue for years to come. Clearly solar PV should be a major piece of our energy portfolio for the next 50-100 years. Along with power plants style generation, we should also be looking at a more distributed style which uses roofs, walls, and even roads as energy generation infrastructure. Now, solar PV alone will not satisfy our energy needs, you can't get energy during the dark, it's one piece of our energy generation strategy.

Please look carefully at what the trends are, which are changing rapidly (for the energy industry), as we put together where we go for the next 50-100 years.

Thank you for the opportunity to comment on the Draft Statewide Resource Analysis.

Dear IURC,

Ladies and gentlemen, While I realize that I am currently residing in one of the most backwards areas of the country, common sense, and overwhelming scientific consensus should lead all level-headed, apolitical lawmakers to head the earth and its many warnings. The effects and impacts of climate change **MUST BE INCLUDED, IN ANY ENERGY ASSESSMENT AND PLAN** which affects Indiana's future. Frankly, **MOST** of us are willing to trade a few less dollar\$ in our 401K, for the security and comfort of clean air to breath, and clean water to drink.

Thank you for the opportunity to comment on the Draft Statewide Resource Analysis.

Dear IURC,

IURC review doesn't mention the risks of fossil fuels. It doesn't acknowledge that coal's time has passed, or that renewable energy is already cheaper than new fracked gas. It doesn't mention climate change. First power companies pressured our state government to take away ENERGIZE INDIANA which has made us loose millions in energy savings since this program was stopped and then the full spectrum of benefits of rooftop solar was taken from the public. The public is paying attention to what is being regulated and who is responsible for some of the bad decisions that have been made in favor of the power companies and certainly not in favor of Indiana citizens that pay for everything. Please go back go the drawing board with this review and incorporate renewable energy into the plan so our state can enjoy the jobs that come with it and cleaner air and water.

Thank you for the opportunity to comment on the Draft Statewide Resource Analysis.

Dear IURC,

Indiana can lead the country with renewable energies...we are already many steps ahead. It is within our power as citizens of Indiana to ban the use of fossil fuels for our collective health and for the health of our environment. Solar, wind power and hydro power are all available to us if our elected officials listen to general public expressed needs.

Subject: Tell the IURC to Repower Indiana

**** This is an EXTERNAL email. Exercise caution. DO NOT open attachments or click links from unknown senders or unexpected email. **** _____

Dear IURC,

Rooftop solar energy should be encouraged. It's not taking up any extra land to generate electricity and drastically cuts the delivery distance of power while the panels are producing energy.

Thank you for the opportunity to comment on the Draft Statewide Resource Analysis.

This important analysis should include the economic risks of continued reliance on fossil fuels like coal and gas, as well as the opportunities to invest in low-cost wind, solar and energy efficiency, which are not subject to fuel cost volatility. Renewable, affordable energy is here and now.

Any energy analysis conducted in 2018 should reflect that, and Hoosiers deserve the benefits of it. Please rewrite your analysis to clearly warn Governor Holcomb and public officials that Indiana will be left behind by technological progress if we don't develop policies and programs to manage our transition from outdated coal and gas to an affordable renewable and efficient energy economy.

Sincerely,

Terri Greene

Dear IURC,

Though I live on a modest retirement income, I am more than glad to pay extra for renewable energy, which I already do. (Green fee) I want to see more effort expended to provide solar and wind power energy to our residents and businesses, it needs to be more accessible and affordable. Making the change to renewable energy will benefit future generations and immediately benefit our precious and irreplaceable wildlife and help our environment. Please help make Indiana fossil fuel free.

Dear IURC,

I don't feel coal/gas energy should be phased out entirely, but as a whole state we should be focused on cleaning up our coal/gas power plants. And we should be holding power companies liable for their pollution. As well as investing in other sources or viable clean energy. As an avid sportsman hunter/fisherman I treasure our states natural resources and environment, I feel very strongly that we should be cleaning up and reducing our pollution. To not invest in cleaner energy sources, and to not make power plants adhere environmental regulations would be a disservice to the citizens of this state.

**** This is an EXTERNAL email. Exercise caution. DO NOT open attachments or click links from unknown senders or unexpected email. **** _____

Dear IURC,

Dear IURC member, as a resident, citizen, and tax paying worker of the state of Indiana, my vision for the people of Indiana is about progress. I am 60 years old and love my state and the people I share it with. I have seen where we came from and it has always been about utilizing the newest technologies to better our environment. Before the turn of the last century, we began to produce power with fossil fuels because it was the newest technology at that time. Now, that technology is over 100 years old! It is outdated, and we now know how harmful it is to our world. We need to embrace new technologies. We need to encourage and promote new technologies, not stifle them! That is the future of Indiana! That is the future of the world! Please don't let corporate greed and ignorance hold us back. Let us be the leader in this PROGRESS.

Thank you for the opportunity to comment on the Draft Statewide Resource Analysis.

Dear IURC,

It is concerning to me that some parts of the state continue to attempt to block wind turbines from coming to their area. As jobs at plants, like Carrier for example, are slowly being siphoned away, this is a great local environmental and economic opportunity. Give more residents the ability to choose where their personal energy comes from! Support new and sustainable energy!

Subject: Tell the IURC to Repower Indiana

**** This is an EXTERNAL email. Exercise caution. DO NOT open attachments or click links from unknown senders or unexpected email. **** _____

Dear IURC,

Thank you for the opportunity to comment on the Draft Statewide Resource Analysis.

This important analysis should include the economic risks of continued reliance on fossil fuels like coal and gas, as well as the opportunities to invest in low-cost wind, solar and energy efficiency, which are not subject to fuel cost volatility. Renewable, affordable energy is here and now.

Any energy analysis conducted in 2018 should reflect that, and Hoosiers deserve the benefits of it. Please rewrite your analysis to clearly warn Governor Holcomb and public officials that Indiana will be left behind by technological progress if we don't develop policies and programs to manage our transition from outdated coal and gas to an affordable renewable and efficient energy economy.

Sincerely,

Toni Osorio

Dear IURC,

With an overwhelming amount scientist and data supporting the ill effects of climate change, now is not the time to suppress renewable energy use with unfair reduced buy back rates for renewable energy homeowners. Claiming this deduction helps pay for the grid cost that homeowners don't have to pay for, but that doesn't account for the federal subsidies used to build and maintain the grid that tax payers already pay. In the European countries homeowners are paid more for the power they produce to encourage more renewable energy investment. Corporate capitalism our country and our lives.

Dear IURC,

In reference to IN energy plans and future needs, please consider our heavy use of coal and fossil fuels and their effect on Hoosier health in your planning. We have poor records for air quality, especially for ozone levels and small particle levels (heavy reliance on coal). IN ranks 13th worst in the US for year-round ozone and particle levels, which are particularly noxious in our northwestern counties and Marion county. High levels of these are linked to a variety of respiratory and cardiac illnesses, and have been linked to low birth weight.

If we truly want IN to be attractive to future investment and the health of our citizens, the health damages due to fossil fuel burning, especially coal, are an obvious factor to consider.

In addition, the future is in renewable energy, and beginning to emphasize renewable energy technologies will benefit not only our health but our economic development (let alone climate issues!)

Subject: Tell the IURC to Repower Indiana

**** This is an EXTERNAL email. Exercise caution. DO NOT open attachments or click links from unknown senders or unexpected email. **** _____

Dear IURC,

I live in a city with old coal fired power plants up and down stream on the Ohio River. Dirty and antiquated equipment, and now they can drop their toxic coal ash so it migrates into environment. I lived in northern Ohio and my job moved us here in '94. Our health has deteriorated since. With a vision of a better future, why do you not invest in life and health through solar and wind options. The sun will always shine and we have the ability to power Indiana with it. I believe we are stuck in 19th century here, like the steam locomotive, there are improvements available. Let's pass initiatives that our children will be proud of, not sick from the toxins and inevitable end of old money coal.

Thank you for the opportunity to comment on the Draft Statewide Resource Analysis.

This important analysis should include the economic risks of continued reliance on fossil fuels like coal and gas, as well as the opportunities to invest in low-cost wind, solar and energy efficiency, which are not subject to fuel cost volatility. Renewable, affordable energy is here and now.

Any energy analysis conducted in 2018 should reflect that, and Hoosiers deserve the benefits of it. Dear IURC,

I am told we have reached the tipping point: It is too late to save the planet. But MAYBE NOT. If there is any hope, Indiana should be part of that hope. Perhaps we can extend the time for our great grandchildren and their descendants. Perhaps we can reverse the dangerous effects of too much carbon in the air and all else that comes from burning dirty fuel. In addition, perhaps we can avoid the quandary of RUNNING OUT of the dirty fuel we use and we can even SAVE MONEY by using cheaper resources. These resources are already here; we just need to learn how to use them. Let's not go extinct because we, as a species, are too selfish or lazy to do what is needed. Any analysis which does not include true costs and benefits is a joke. Please include the risks of fossil fuels and the possibilities of other power sources in the analysis of Indiana's energy needs. Killing our host (the earth) to make a buck will no longer work.

Thank you for the opportunity to comment on the Draft Statewide Resource Analysis.

Dear IURC,

I would like to see residents who own their homes and choose Solar Panels (or any other type of energy producing product) to help offset usage pollution and cost, not be charged higher rates than those customers who don't have other means of producing their own energy.

It's bad when environmental conscience people spend hard earned money investing in the future only to get penalized by big corporation's greed. I've personally not seen this as a regulation in writing, just a friends Electric bill that increased after having solar panels installed. He was told that since he wasn't using "x" amount of electricity he had to pay a higher rate for the "service of getting it to him to offset the company's costs". That's been a few years ago and if that policy hasn't changed I believe it should. Thank you

Subject: Tell the IURC to Repower Indiana

**** This is an EXTERNAL email. Exercise caution. DO NOT open attachments or click links from unknown senders or unexpected email. **** _____

Dear IURC,

Thank you for the opportunity to comment on the Draft Statewide Resource Analysis.

This important analysis should include the economic risks of continued reliance on fossil fuels like coal and gas, as well as the opportunities to invest in low-cost wind, solar and energy efficiency, which are not subject to fuel cost volatility. Renewable, affordable energy is here and now.

Any energy analysis conducted in 2018 should reflect that, and Hoosiers deserve the benefits of it. Please rewrite your analysis to clearly warn Governor Holcomb and public officials that Indiana will be left behind by technological progress if we don't develop policies and programs to manage our transition from outdated coal and gas to an affordable renewable and efficient energy economy.

Sincerely,

James Kohlmeyer

**** This is an EXTERNAL email. Exercise caution. DO NOT open attachments or click links from unknown senders or unexpected email. **** _____

Dear IURC,

In addition to the economic costs associated with continued reliance on fossil fuels are the effects on Hoosiers' health. Indiana is near the bottom of the rankings on all health parameters. We also have far too many children who suffer from asthma, which may be caused or exacerbated by poor air quality. Also, manufacturing has long been one of Indiana's strengths. The opportunity to become a leader in the manufacture of items essential to alternative energy generation should be vigorously pursued by our General Assembly.

Thank you for the opportunity to comment on the Draft Statewide Resource Analysis.

**** This is an EXTERNAL email. Exercise caution. DO NOT open attachments or click links from unknown senders or unexpected email. **** _____

Dear IURC,

Indiana is often seen as lacking foresight on energy planning with their refusal to encourage the growth of renewable energy. Let this be a time for our state to be amongst the leaders in clean energy development. Let Indiana be amongst the leaders in considering the needs of our planet and all its inhabitants.

Thank you for the opportunity to comment on the Draft Statewide Resource Analysis.

This important analysis should include the economic risks of continued reliance on fossil fuels like coal and gas, as well as the opportunities to invest in low-cost wind, solar and energy efficiency, which are not subject to fuel cost volatility. Renewable, affordable energy is here and now.

**** This is an EXTERNAL email. Exercise caution. DO NOT open attachments or click links from unknown senders or unexpected email. **** _____

Dear IURC,

There is no question that our state is warming overall and experiencing more severe weather year-round. We aren't a solar hotbed, pun intended, but wind power has been and remains a good bet as part of Indiana's energy present and future. Solar can help during the warmer months, including passive solar to heat water for bathing, cooking, clothes washing etc. We absolutely must back away from coal. It's archaic. Natural gas remains a good option for now, however, and is the only clean fossil fuel we have access to.

Please look at the overwhelming scientific evidence when planning for our present and future. Thank you.

Thank you for the opportunity to comment on the Draft Statewide Resource Analysis.

Dear IURC,

Please include the risk of fossil fuels and the opportunities for affordable renewable energy in the state energy analysis. It is past time to move Indiana toward renewable energy (and I don't mean trees). Please consider the health costs of fossil fuels. Poor air quality, increased respiratory illness, and so forth. Look to the future.

Thank you for the opportunity to comment on the Draft Statewide Resource Analysis.

Subject: Tell the IURC to Repower Indiana

**** This is an EXTERNAL email. Exercise caution. DO NOT open attachments or click links from unknown senders or unexpected email. **** _____

Dear IURC,

Thank you for the opportunity to comment on the Draft Statewide Resource Analysis.

This important analysis should include the economic risks of continued reliance on fossil fuels like coal and gas, as well as the opportunities to invest in low-cost wind, solar and energy efficiency, which are not subject to fuel cost volatility. Renewable, affordable energy is here and now.

Any energy analysis conducted in 2018 should reflect that, and Hoosiers deserve the benefits of it. Please rewrite your analysis to clearly warn Governor Holcomb and public officials that Indiana will be left behind by technological progress if we don't develop policies and programs to manage our transition from outdated coal and gas to an affordable renewable and efficient energy economy.

Sincerely,

Deborah Miller

Dear IURC,

Emissions from coal plants sicken millions and place huge costs on our healthcare system and our economy. Have you factored those costs into your analysis? If not, you need to, as they are a cost of continued use of coal. The world is moving to renewable energy fast. Let's not get left behind.

Thank you for the opportunity to comment on the Draft Statewide Resource Analysis.

This important analysis should include the economic risks of continued reliance on fossil fuels like coal and gas, as well as the opportunities to invest in low-cost wind, solar and energy efficiency, which are not subject to fuel cost volatility. Renewable, affordable energy is here and now.

Any energy analysis conducted in 2018 should reflect that, and Hoosiers deserve the benefits of it. Please rewrite your analysis to clearly warn Governor Holcomb and public officials that Indiana will be left behind by technological progress if we don't develop policies and programs to manage our transition from outdated coal and gas to an affordable renewable and efficient energy economy.

Sincerely,

Dear IURC,

As our climate becomes more erratic and weather becomes more erratic and dangerous due to anthropogenic climate change, we need to do all in our power to slow and ultimately reverse the effects of CO2 and methane-caused effects on our climate. Please don't delay. Use renewable energy NOW and promote energy efficiency. We, and future generations, will all benefit.

Thank you for the opportunity to comment on the Draft Statewide Resource Analysis.

Subject: Tell the IURC to Repower Indiana

**** This is an EXTERNAL email. Exercise caution. DO NOT open attachments or click links from unknown senders or unexpected email. **** _____

Dear IURC,

Thank you for the opportunity to comment on the Draft Statewide Resource Analysis.

This important analysis should include the economic risks of continued reliance on fossil fuels like coal and gas, as well as the opportunities to invest in low-cost wind, solar and energy efficiency, which are not subject to fuel cost volatility. Renewable, affordable energy is here and now.

Any energy analysis conducted in 2018 should reflect that, and Hoosiers deserve the benefits of it. Please rewrite your analysis to clearly warn Governor Holcomb and public officials that Indiana will be left behind by technological progress if we don't develop policies and programs to manage our transition from outdated coal and gas to an affordable renewable and efficient energy economy.

Sincerely,

Dennis Horn

Dear IURC,

Many citizens, including myself, are seeking clean and sustainable energy sources such as solar and wind power. Not only do coal and gas generated energy sources pollute the air and water, but they have led to a global warming trend that does not leave a legacy to our children and grandchildren of a sustainable future. Please think long-term instead of being locked into the use of fossil fuels.

Thank you for the opportunity to comment on the Draft Statewide Resource Analysis.

Subject: Tell the IURC to Repower Indiana

**** This is an EXTERNAL email. Exercise caution. DO NOT open attachments or click links from unknown senders or unexpected email. **** _____

Dear IURC,

I do all I can to minimize my use of fossil fuels. I would like to think that such is also the policy of the state of Indiana. There are obvious challenges to the transition from fossil fuels to renewable energy sources, but we should be addressing those challenges creatively rather than shying away from them.

Thank you for the opportunity to comment on the Draft Statewide Resource Analysis.

This important analysis should include the economic risks of continued reliance on fossil fuels like coal and gas, as well as the opportunities to invest in low-cost wind, solar and energy efficiency, which are not subject to fuel cost volatility. Renewable, affordable energy is here and now.

Any energy analysis conducted in 2018 should reflect that, and Hoosiers deserve the benefits of it. Please rewrite your analysis to clearly warn Governor Holcomb and public officials that Indiana will be left behind by technological progress if we don't develop policies and programs to manage our transition from outdated coal and gas to an affordable renewable and efficient energy economy.

Sincerely,

Virginia Emigh

**** This is an EXTERNAL email. Exercise caution. DO NOT open attachments or click links from unknown senders or unexpected email. **** _____

Dear IURC,

Such foolishness to continue using coal for obvious reasons. Todd and Joe need a kick in the butt and stop taking cash from the coal guys. It's really a matter of love in the form of caring for the well being of man. Taking money here is sinful.

Thank you for the opportunity to comment on the Draft Statewide Resource Analysis.

Dear IURC,

It is amazing how history repeats itself and how people are so opposed to science and change when their personal bottomline is threatened. We sacrifice the health of people and the balance maintained in our natural world for the imbalance, abuse and overindulgence of the corporate world. Dark ages all over again--the world is flat, the earth is the center of the universe--lets just keep using inefficient, unrenewable, disease producing energy sources and ignore science and change for the better. Get your head out of the sand created by old ways of thinking and ignorance and come into the the world of real progress.

Thank you for the opportunity to comment on the Draft Statewide Resource Analysis.

Subject: Tell the IURC to Repower Indiana

**** This is an EXTERNAL email. Exercise caution. DO NOT open attachments or click links from unknown senders or unexpected email. **** _____

Dear IURC,

Please consider solar and wind power and alternative energy. Coal is a terrible pollutant in so many ways. Thank you for considering my request. Suzy ODonnell, Goshen IN

Thank you for the opportunity to comment on the Draft Statewide Resource Analysis.

This important analysis should include the economic risks of continued reliance on fossil fuels like coal and gas, as well as the opportunities to invest in low-cost wind, solar and energy efficiency, which are not subject to fuel cost volatility. Renewable, affordable energy is here and now.

Any energy analysis conducted in 2018 should reflect that, and Hoosiers deserve the benefits of it. Please rewrite your analysis to clearly warn Governor Holcomb and public officials that Indiana will be left behind by technological progress if we don't develop policies and programs to manage our transition from outdated coal and gas to an affordable renewable and efficient energy economy.

Sincerely,

Susan Odonnell

Dear IURC,

Fossil fuels are very risky! Renewable energy is cheaper and does not add to the climate change problem. We must not allow monopoly power companies to dictate our energy policies. Fossil fuels pollute our air, water and land without repercussions while we pay higher electricity bills.

A healthy choice for your Indiana customers is now much needed. Say no to fossil fuels and move on to renewable energy.

Thank you for the opportunity to comment on the Draft Statewide Resource Analysis.

This important analysis should include the economic risks of continued reliance on fossil fuels like coal and gas, as well as the opportunities to invest in low-cost wind, solar and energy efficiency, which are not subject to fuel cost volatility. Renewable, affordable energy is here and now.

Any energy analysis conducted in 2018 should reflect that, and Hoosiers deserve the benefits of it. Please rewrite your analysis to clearly warn Governor Holcomb and public officials that Indiana will be left behind by technological progress if we don't develop policies and programs to manage our transition from outdated coal and gas to an affordable renewable and efficient energy economy.

Sincerely,

Dear IURC,

Regulators, the most recent version of the Statewide Resource Analysis is shamefully incomplete, as it does not address the existing and ongoing health and environment risks of fossil fuel use. It doesn't recognize that coal's time should have been over years ago---the poor past decision by the IURC have delayed the conversion to safer, healthier, greener, less expensive (especially when considering fossil fuel risks). The result of these poor decisions, by the very regulatory body that should be considering ALL the states' citizens, not just corporations, their owners/executives. The old thinking about energy resources, the often revolving door between IURC, legislators and lobbyists, has been a shameful disgrace. No wonder Indiana ranks so poorly in environmental reviews, quality of health of it's citizens. Throw out this junk Draft, and start thinking and acting like you're in the current century! Sincerely, Dennis Carr
